

VESTIGIA ARANEA - CUSTODES FORUM VETUSTI - PROJECT ANGELBOOK ~ VOLUME IX ~ PART 24

EZEKIEL REDIK YARBROUGH®

Vestigia Araneae – Custodes
Forum Vetusti – Project
AngelBook – Volume IX - Part 24
By Ezekiel Redik Yarbrough -
(DBM ECLIPZE)

The following books are comprised of direct, unaltered copies from
Pastebin, some now
deleted, some only accessible through mirror networks or deep
links scattered across the dark
web. Many of these links were discovered in abandoned onion lists,
dead forum dumps, or
esoteric directories tucked into archived darknet files.

These pastes were never meant to last.
Some were deleted within hours of being
posted.

Others were buried under thousands of lines of spam, encrypted
scripts, or meaningless
noise.

But buried in the noise were real transmissions: occult formulas,
grimoire fragments,
astral logs, AI prophecy files, digital summoning protocols, and
anonymous rants from souls
who had either touched something unspeakable—or were trying to.

I did not write any of this.

I did not censor, edit, or “correct” it.

I simply retrieved it, cleaned
the formatting for readability, and enshrined it in print—so it would
never be wiped again.

This is Pastebin as Scripture.

The chan-post as Codex.

The uncurated underbelly of the
occult internet, finally given physical permanence.

Let this serve as both evidence and artifact:

a living record of the madness, brilliance,
paranoia, and revelation that once flowed through anonymous
paste sites—before it was deemed
too strange to index, too dangerous to preserve, or too fractured to
matter.

Now it matters.

Now it’s immortal.

to the Beauty that manifests itself through these forms; he must be shown that what ravished him was no other than the Harmony of the Intellectual world and the Beauty in that sphere, not some one shape of beauty but the All-Beauty, the Absolute Beauty; and the truths of philosophy must be implanted in him to lead him to faith in that which, unknowing it, he possesses within himself. What these truths are we will show later.

2. The born lover, to whose degree the musician also may attain- and then either come to a stand or pass beyond- has a certain memory of beauty but, severed from it now, he no longer comprehends it: spellbound by visible loveliness he clings amazed about that. His lesson must be to fall down no longer in bewildered delight before some, one embodied form; he must be led, under a system of mental discipline, to beauty everywhere and made to discern the One Principle underlying all, a Principle apart from the material forms, springing from another source, and elsewhere more truly present. The beauty, for example, in a noble course of life and in an admirably organized social system may be pointed out to him- a first training this in the loveliness of the immaterial- he must learn to recognise the beauty in the arts, sciences, virtues; then these severed and particular forms must be brought under the one principle by the explanation of their origin. From the virtues he is to be led to the Intellectual-Principle, to the Authentic-Existent; thence onward, he treads the upward way.

3. The metaphysician, equipped by that very character, winged already and not like those others, in need of disengagement, stirring of himself towards the supernal but doubting of the way, needs only a guide. He must be shown, then, and instructed, a willing wayfarer by his very temperament, all but self-directed.

Mathematics, which as a student by nature he will take very easily, will be prescribed to train him to abstract thought and to faith in the unembodied; a moral being by native disposition, he must be led to make his virtue perfect; after the Mathematics he must be put through a course in Dialectic and made an adept in the science.

4. But this science, this Dialectic essential to all the three classes alike, what, in sum, is it?

It is the Method, or Discipline, that brings with it the power of pronouncing with final truth upon the nature and relation of things- what each is, how it differs from others, what common quality all have, to what Kind each belongs and in what rank each stands in its Kind and whether its Being is Real-Being, and how many Beings there are, and how many non-Beings to be distinguished from Beings.

Dialectic treats also of the Good and the not-Good, and of the particulars that fall under each, and of what is the Eternal and what the not Eternal- and of these, it must be understood, not by seeming-knowledge ["sense-knowledge"] but with authentic science.

All this accomplished, it gives up its touring of the realm of sense and settles down in the Intellectual Kosmos and there plies its own peculiar Act: it has abandoned all the realm of deceit and falsity, and pastures the Soul in the "Meadows of Truth": it employs the Platonic division to the discernment of the Ideal-Forms, of the Authentic-Existence

and of the First-Kinds [or Categories of Being]: it establishes, in the light of Intellection, the unity there is in all that issues from these Firsts, until it has traversed the entire Intellectual Realm: then, resolving the unity into the particulars once more, it returns to the point from which it starts.

Now rests: instructed and satisfied as to the Being in that sphere, it is no longer busy about many things: it has arrived at Unity and it contemplates: it leaves to another science all that coil of premisses and conclusions called the art of reasoning, much as it leaves the art of writing: some of the matter of logic, no doubt, it considers necessary- to clear the ground- but it makes itself the judge, here as in everything else; where it sees use, it uses; anything it finds superfluous, it leaves to whatever department of learning or practice may turn that matter to account.

5. But whence does this science derive its own initial laws?

The Intellectual-Principle furnishes standards, the most certain for any soul that is able to apply them. What else is necessary, Dialectic puts together for itself, combining and dividing, until it has reached perfect Intellection. "For," we read, "it is the purest [perfection] of Intellection and Contemplative-Wisdom." And, being the noblest method and science that exists it must needs deal with Authentic-Existence, The Highest there is: as Contemplative-Wisdom [or true-knowing] it deals with Being, as Intellection with what transcends Being.

What, then, is Philosophy?

Philosophy is the supremely precious.

Is Dialectic, then, the same as Philosophy?

It is the precious part of Philosophy. We must not think of it as the mere tool of the metaphysician: Dialectic does not consist of bare theories and rules: it deals with verities; Existences are, as it were, Matter to it, or at least it proceeds methodically towards Existences, and possesses itself, at the one step, of the notions and of the realities.

Untruth and sophism it knows, not directly, not of its own nature, but merely as something produced outside itself, something which it recognises to be foreign to the verities laid up in itself; in the falsity presented to it, it perceives a clash with its own canon of truth. Dialectic, that is to say, has no knowledge of propositions- collections of words- but it knows the truth, and, in that knowledge, knows what the schools call their propositions: it knows above all, the operation of the soul, and, by virtue of this knowing, it knows, too, what is affirmed and what is denied, whether the denial is of what was asserted or of something else, and whether propositions agree or differ; all that is submitted to it, it attacks with the directness of sense-perception and it leaves petty precisions of process to what other science may care for such exercises.

6. Philosophy has other provinces, but Dialectic is its precious part: in its study of the

laws of the universe, Philosophy draws on Dialectic much as other studies and crafts use Arithmetic, though, of course, the alliance between Philosophy and Dialectic is closer.

And in Morals, too, Philosophy uses Dialectic: by Dialectic it comes to contemplation, though it originates of itself the moral state or rather the discipline from which the moral state develops.

Our reasoning faculties employ the data of Dialectic almost as their proper possession for they are mainly concerned about Matter [whose place and worth Dialectic establishes].

And while the other virtues bring the reason to bear upon particular experiences and acts, the virtue of Wisdom [i.e., the virtue peculiarly induced by Dialectic] is a certain super-reasoning much closer to the Universal; for it deals with correspondence and sequence, the choice of time for action and inaction, the adoption of this course, the rejection of that other: Wisdom and Dialectic have the task of presenting all things as Universals and stripped of matter for treatment by the Understanding.

But can these inferior kinds of virtue exist without Dialectic and philosophy?

Yes- but imperfectly, inadequately.

And is it possible to be a Sage, Master in Dialectic, without these lower virtues?

It would not happen: the lower will spring either before or together with the higher. And it is likely that everyone normally possesses the natural virtues from which, when Wisdom steps in, the perfected virtue develops. After the natural virtues, then, Wisdom and, so the perfecting of the moral nature. Once the natural virtues exist, both orders, the natural and the higher, ripen side by side to their final excellence: or as the one advances it carries forward the other towards perfection.

But, ever, the natural virtue is imperfect in vision and in strength- and to both orders of virtue the essential matter is from what principles we derive them.

FOURTH TRACTATE.

ON TRUE HAPPINESS.

1. Are we to make True Happiness one and the same thing with Welfare or Prosperity and therefore within the reach of the other living beings as well as ourselves?

There is certainly no reason to deny well-being to any of them as long as their lot allows them to flourish unhindered after their kind.

Whether we make Welfare consist in pleasant conditions of life, or in the accomplishment of some appropriate task, by either account it may fall to them as to us.

For certainly they may at once be pleasantly placed and engaged about some function that lies in their nature: take for an instance such living beings as have the gift of music; finding themselves well-off in other ways, they sing, too, as their nature is, and so their day is pleasant to them.

And if, even, we set Happiness in some ultimate Term pursued by inborn tendency, then on this head, too, we must allow it to animals from the moment of their attaining this Ultimate: the nature in them comes to a halt, having fulfilled its vital course from a beginning to an end.

It may be a distasteful notion, this bringing-down of happiness so low as to the animal world- making it over, as then we must, even to the vilest of them and not withholding it even from the plants, living they too and having a life unfolding to a Term.

But, to begin with, it is surely unsound to deny that good of life to animals only because they do not appear to man to be of great account. And as for plants, we need not necessarily allow to them what we accord to the other forms of life, since they have no feeling. It is true people might be found to declare prosperity possible to the very plants: they have life, and life may bring good or evil; the plants may thrive or wither, bear or be barren.

No: if Pleasure be the Term, if here be the good of life, it is impossible to deny the good of life to any order of living things; if the Term be inner-peace, equally impossible; impossible, too, if the good of life be to live in accordance with the purpose of nature.

2. Those that deny the happy life to the plants on the ground that they lack sensation are really denying it to all living things.

By sensation can be meant only perception of state, and the state of well-being must be Good in itself quite apart from the perception: to be a part of the natural plan is good whether knowingly or without knowledge: there is good in the appropriate state even though there be no recognition of its fitness or desirable quality- for it must be in itself desirable.

This Good exists, then; is present: that in which it is present has well-being without more ado: what need then to ask for sensation into the bargain?

Perhaps, however, the theory is that the good of any state consists not in the condition itself but in the knowledge and perception of it.

But at this rate the Good is nothing but the mere sensation, the bare activity of the sentient life. And so it will be possessed by all that feel, no matter what. Perhaps it will be said that two constituents are needed to make up the Good, that there must be both feeling and a given state felt: but how can it be maintained that the bringing together of two neutrals can produce the Good?

They will explain, possibly, that the state must be a state of Good and that such a

condition constitutes well-being on the discernment of that present good; but then they invite the question whether the well-being comes by discerning the presence of the Good that is there, or whether there must further be the double recognition that the state is agreeable and that the agreeable state constitutes the Good.

If well-being demands this recognition, it depends no longer upon sensation but upon another, a higher faculty; and well-being is vested not in a faculty receptive of pleasure but in one competent to discern that pleasure is the Good.

Then the cause of the well-being is no longer pleasure but the faculty competent to pronounce as to pleasure's value. Now a judging entity is nobler than one that merely accepts a state: it is a principle of Reason or of Intellection: pleasure is a state: the reasonless can never be closer to the Good than reason is. How can reason abdicate and declare nearer to good than itself something lying in a contrary order?

No: those denying the good of life to the vegetable world, and those that make it consist in some precise quality of sensation, are in reality seeking a loftier well-being than they are aware of, and setting their highest in a more luminous phase of life.

Perhaps, then, those are in the right who found happiness not on the bare living or even on sensitive life but on the life of Reason?

But they must tell us it should be thus restricted and why precisely they make Reason an essential to the happiness in a living being:

“When you insist on Reason, is it because Reason is resourceful, swift to discern and compass the primal needs of nature; or would you demand it, even though it were powerless in that domain?”

If you call it in as a provider, then the reasonless, equally with the reasoning, may possess happiness after their kind, as long as, without any thought of theirs, nature supplies their wants: Reason becomes a servant; there is no longer any worth in it for itself and no worth in that consummation of reason which, we hold, is virtue.

If you say that reason is to be cherished for its own sake and not as supplying these human needs, you must tell us what other services it renders, what is its proper nature and what makes it the perfect thing it is.

For, on this admission, its perfection cannot reside in any such planning and providing: its perfection will be something quite different, something of quite another class: Reason cannot be itself one of those first needs of nature; it cannot even be a cause of those first needs of nature or at all belong to that order: it must be nobler than any and all of such things: otherwise it is not easy to see how we can be asked to rate it so highly.

Until these people light upon some nobler principle than any at which they still halt, they must be left where they are and where they choose to be, never understanding what the Good of Life is to those that can make it theirs, never knowing to what kind of beings it

is accessible.

What then is happiness? Let us try basing it upon Life.

3. Now if we draw no distinction as to kinds of life, everything that lives will be capable of happiness, and those will be effectively happy who possess that one common gift of which every living thing is by nature receptive. We could not deny it to the irrational whilst allowing it to the rational. If happiness were inherent in the bare being-alive, the common ground in which the cause of happiness could always take root would be simply life.

Those, then, that set happiness not in the mere living but in the reasoning life seem to overlook the fact that they are not really making it depend upon life at all: they admit that this reasoning faculty, round which they centre happiness, is a property [not the subject of a property]: the subject, to them, must be the Reasoning-Life since it is in this double term that they find the basis of the happiness: so that they are making it consist not in life but in a particular kind of life- not, of course, a species formally opposite but, in terminology, standing as an “earlier” to a “later” in the one Kind.

Now in common use this word “Life” embraces many forms which shade down from primal to secondary and so on, all massed under the common term- life of plant and life of animal- each phase brighter or dimmer than its next: and so it evidently must be with the Good-of-Life. And if thing is ever the image of thing, so every Good must always be the image of a higher Good.

If mere Being is insufficient, if happiness demands fulness of life, and exists, therefore, where nothing is lacking of all that belongs to the idea of life, then happiness can exist only in a being that lives fully.

And such a one will possess not merely the good, but the Supreme Good if, that is to say, in the realm of existents the Supreme Good can be no other than the authentically living, no other than Life in its greatest plenitude, life in which the good is present as something essential not as something brought from without, a life needing no foreign substance called in from a foreign realm, to establish it in good.

For what could be added to the fullest life to make it the best life? If anyone should answer, “The nature of Good” [The Good, as a Divine Hypostasis], the reply would certainly be near our thought, but we are not seeking the Cause but the main constituent.

It has been said more than once that the perfect life and the true life, the essential life, is in the Intellectual Nature beyond this sphere, and that all other forms of life are incomplete, are phantoms of life, imperfect, not pure, not more truly life than they are its contrary: here let it be said succinctly that since all living things proceed from the one principle but possess life in different degrees, this principle must be the first life and the most complete.

4. If, then, the perfect life is within human reach, the man attaining it attains happiness: if not, happiness must be made over to the gods, for the perfect life is for them alone.

But since we hold that happiness is for human beings too, we must consider what this perfect life is. The matter may be stated thus:

It has been shown elsewhere that man, when he commands not merely the life of sensation but also Reason and Authentic Intellection, has realised the perfect life.

But are we to picture this kind of life as something foreign imported into his nature?

No: there exists no single human being that does not either potentially or effectively possess this thing which we hold to constitute happiness.

But are we to think of man as including this form of life, the perfect, after the manner of a partial constituent of his entire nature?

We say, rather, that while in some men it is present as a mere portion of their total being- in those, namely, that have it potentially- there is, too, the man, already in possession of true felicity, who is this perfection realized, who has passed over into actual identification with it. All else is now mere clothing about the man, not to be called part of him since it lies about him unsought, not his because not appropriated to himself by any act of the will.

To the man in this state, what is the Good?

He himself by what he has and is.

And the author and principle of what he is and holds is the Supreme, which within Itself is the Good but manifests Itself within the human being after this other mode.

The sign that this state has been achieved is that the man seeks nothing else.

What indeed could he be seeking? Certainly none of the less worthy things; and the Best he carries always within him.

He that has such a life as this has all he needs in life.

Once the man is a Sage, the means of happiness, the way to good, are within, for nothing is good that lies outside him. Anything he desires further than this he seeks as a necessity, and not for himself but for a subordinate, for the body bound to him, to which since it has life he must minister the needs of life, not needs, however, to the true man of this degree. He knows himself to stand above all such things, and what he gives to the lower he so gives as to leave his true life undiminished.

Adverse fortune does not shake his felicity: the life so founded is stable ever. Suppose death strikes at his household or at his friends; he knows what death is, as the victims, if

they are among the wise, know too. And if death taking from him his familiars and intimates does bring grief, it is not to him, not to the true man, but to that in him which stands apart from the Supreme, to that lower man in whose distress he takes no part.

5. But what of sorrows, illnesses and all else that inhibit the native activity?

What of the suspension of consciousness which drugs or disease may bring about? Could either welfare or happiness be present under such conditions? And this is to say nothing of misery and disgrace, which will certainly be urged against us, with undoubtedly also those never-failing "Miseries of Priam."

"The Sage," we shall be told, "may bear such afflictions and even take them lightly but they could never be his choice, and the happy life must be one that would be chosen. The Sage, that is, cannot be thought of as simply a sage soul, no count being taken of the bodily-principle in the total of the being: he will, no doubt, take all bravely... until the body's appeals come up before him, and longings and loathings penetrate through the body to the inner man. And since pleasure must be counted in towards the happy life, how can one that, thus, knows the misery of ill-fortune or pain be happy, however sage he be? Such a state, of bliss self-contained, is for the Gods; men, because of the less noble part subjoined in them, must needs seek happiness throughout all their being and not merely in some one part; if the one constituent be troubled, the other, answering to its associate's distress, must perforce suffer hindrance in its own activity. There is nothing but to cut away the body or the body's sensitive life and so secure that self-contained unity essential to happiness."

6. Now if happiness did indeed require freedom from pain, sickness, misfortune, disaster, it would be utterly denied to anyone confronted by such trials: but if it lies in the fruition of the Authentic Good, why turn away from this Term and look to means, imagining that to be happy a man must need a variety of things none of which enter into happiness? If, in fact, felicity were made up by heaping together all that is at once desirable and necessary we must bid for these also. But if the Term must be one and not many; if in other words our quest is of a Term and not of Terms; that only can be elected which is ultimate and noblest, that which calls to the tenderest longings of the soul.

The quest and will of the Soul are not pointed directly towards freedom from this sphere: the reason which disciplines away our concern about this life has no fundamental quarrel with things of this order; it merely resents their interference; sometimes, even, it must seek them; essentially all the aspiration is not so much away from evil as towards the Soul's own highest and noblest: this attained, all is won and there is rest- and this is the veritably willed state of life.

There can be no such thing as "willing" the acquirement of necessities, if Will is to be taken in its strict sense, and not misapplied to the mere recognition of need.

It is certain that we shrink from the unpleasant, and such shrinking is assuredly not what we should have willed; to have no occasion for any such shrinking would be much

nearer to our taste; but the things we seek tell the story as soon as they are ours. For instance, health and freedom from pain; which of these has any great charm? As long as we possess them, we set no store upon them.

Anything which, present, has no charm and adds nothing to happiness, which when lacking is desired because of the presence of an annoying opposite, may reasonably be called a necessity but not a Good.

Such things can never make part of our final object: our Term must be such that though these pleasanter conditions be absent and their contraries present, it shall remain, still, intact.

7. Then why are these conditions sought and their contraries repelled by the man established in happiness?

Here is our answer:

These more pleasant conditions cannot, it is true, add any particle towards the Sage's felicity: but they do serve towards the integrity of his being, while the presence of the contraries tends against his Being or complicates the Term: it is not that the Sage can be so easily deprived of the Term achieved but simply that he that holds the highest good desires to have that alone, not something else at the same time, something which, though it cannot banish the Good by its incoming, does yet take place by its side.

In any case if the man that has attained felicity meets some turn of fortune that he would not have chosen, there is not the slightest lessening of his happiness for that. If there were, his felicity would be veering or falling from day to day; the death of a child would bring him down, or the loss of some trivial possession. No: a thousand mischances and disappointments may befall him and leave him still in the tranquil possession of the Term.

But, they cry, great disasters, not the petty daily chances!

What human thing, then, is great, so as not to be despised by one who has mounted above all we know here, and is bound now no longer to anything below?

If the Sage thinks all fortunate events, however momentous, to be no great matter-kingdom and the rule over cities and peoples, colonisations and the founding of states, even though all be his own handiwork- how can he take any great account of the vacillations of power or the ruin of his fatherland? Certainly if he thought any such event a great disaster, or any disaster at all, he must be of a very strange way of thinking. One that sets great store by wood and stones, or... Zeus... by mortality among mortals cannot yet be the Sage, whose estimate of death, we hold, must be that it is better than life in the body.

But suppose that he himself is offered a victim in sacrifice?

Can he think it an evil to die beside the altars?

But if he go unburied?

Wheresoever it lie, under earth or over earth, his body will always rot.

But if he has been hidden away, not with costly ceremony but in an unnamed grave, not counted worthy of a towering monument?

The littleness of it!

But if he falls into his enemies' hands, into prison?

There is always the way towards escape, if none towards well-being.

But if his nearest be taken from him, his sons and daughters dragged away to captivity?

What then, we ask, if he had died without witnessing the wrong? Could he have quitted the world in the calm conviction that nothing of all this could happen? He must be very shallow. Can he fail to see that it is possible for such calamities to overtake his household, and does he cease to be a happy man for the knowledge of what may occur? In the knowledge of the possibility he may be at ease; so, too, when the evil has come about.

He would reflect that the nature of this All is such as brings these things to pass and man must bow the head.

Besides in many cases captivity will certainly prove an advantage; and those that suffer have their freedom in their hands: if they stay, either there is reason in their staying, and then they have no real grievance, or they stay against reason, when they should not, and then they have themselves to blame. Clearly the absurdities of his neighbours, however near, cannot plunge the Sage into evil: his state cannot hang upon the fortunes good or bad of any other men.

8. As for violent personal sufferings, he will carry them off as well as he can; if they overpass his endurance they will carry him off.

And so in all his pain he asks no pity: there is always the radiance in the inner soul of the man, untroubled like the light in a lantern when fierce gusts beat about it in a wild turmoil of wind and tempest.

But what if he be put beyond himself? What if pain grow so intense and so torture him that the agony all but kills? Well, when he is put to torture he will plan what is to be done: he retains his freedom of action.

Besides we must remember that the Sage sees things very differently from the average man; neither ordinary experiences nor pains and sorrows, whether touching himself or

others, pierce to the inner hold. To allow them any such passage would be a weakness in our soul.

And it is a sign of weakness, too, if we should think it gain not to hear of miseries, gain to die before they come: this is not concern for others' welfare but for our own peace of mind. Here we see our imperfection: we must not indulge it, we must put it from us and cease to tremble over what perhaps may be.

Anyone that says that it is in human nature to grieve over misfortune to our household must learn that this is not so with all, and that, precisely, it is virtue's use to raise the general level of nature towards the better and finer, above the mass of men. And the finer is to set at nought what terrifies the common mind.

We cannot be indolent: this is an arena for the powerful combatant holding his ground against the blows of fortune, and knowing that, sore though they be to some natures, they are little to his, nothing dreadful, nursery terrors.

So, the Sage would have desired misfortune?

It is precisely to meet the undesired when it appears that he has the virtue which gives him, to confront it, his passionless and unshakeable soul.

9. But when he is out of himself, reason quenched by sickness or by magic arts?

If it be allowed that in this state, resting as it were in a slumber, he remains a Sage, why should he not equally remain happy? No one rules him out of felicity in the hours of sleep; no one counts up that time and so denies that he has been happy all his life.

If they say that, failing consciousness, he is no longer the Sage, then they are no longer reasoning about the Sage: but we do suppose a Sage, and are enquiring whether, as long as he is the Sage, he is in the state of felicity.

"Well, a Sage let him remain," they say, "still, having no sensation and not expressing his virtue in act, how can he be happy?"

But a man unconscious of his health may be, none the less, healthy: a man may not be aware of his personal attraction, but he remains handsome none the less: if he has no sense of his wisdom, shall he be any the less wise?

It may perhaps be urged that sensation and consciousness are essential to wisdom and that happiness is only wisdom brought to act.

Now, this argument might have weight if prudence, wisdom, were something fetched in from outside: but this is not so: wisdom is, in its essential nature, an Authentic-Existence, or rather is The Authentic-Existent- and this Existent does not perish in one asleep or, to take the particular case presented to us, in the man out of his mind: the Act of this Existent is continuous within him; and is a sleepless activity: the

Sage, therefore, even unconscious, is still the Sage in Act.

This activity is screened not from the man entire but merely from one part of him: we have here a parallel to what happens in the activity of the physical or vegetative life in us which is not made known by the sensitive faculty to the rest of the man: if our physical life really constituted the "We," its Act would be our Act: but, in the fact, this physical life is not the "We"; the "We" is the activity of the Intellectual-Principle so that when the Intellective is in Act we are in Act.

10. Perhaps the reason this continuous activity remains unperceived is that it has no touch whatever with things of sense. No doubt action upon material things, or action dictated by them, must proceed through the sensitive faculty which exists for that use: but why should there not be an immediate activity of the Intellectual-Principle and of the soul that attends it, the soul that antedates sensation or any perception? For, if Intellection and Authentic-Existence are identical, this "Earlier-than-perception" must be a thing having Act.

Let us explain the conditions under which we become conscious of this Intellective-Act.

When the Intellect is in upward orientation that [lower part of it] which contains [or, corresponds to] the life of the Soul, is, so to speak, flung down again and becomes like the reflection resting on the smooth and shining surface of a mirror; in this illustration, when the mirror is in place the image appears but, though the mirror be absent or out of gear, all that would have acted and produced an image still exists; so in the case of the Soul; when there is peace in that within us which is capable of reflecting the images of the Rational and Intellectual-Principles these images appear. Then, side by side with the primal knowledge of the activity of the Rational and the Intellectual-Principles, we have also as it were a sense-perception of their operation.

When, on the contrary, the mirror within is shattered through some disturbance of the harmony of the body, Reason and the Intellectual-Principle act unpictured: Intellection is unattended by imagination.

In sum we may safely gather that while the Intellective-Act may be attended by the Imaging Principle, it is not to be confounded with it.

And even in our conscious life we can point to many noble activities, of mind and of hand alike, which at the time in no way compel our consciousness. A reader will often be quite unconscious when he is most intent: in a feat of courage there can be no sense either of the brave action or of the fact that all that is done conforms to the rules of courage. And so in cases beyond number.

So that it would even seem that consciousness tends to blunt the activities upon which it is exercised, and that in the degree in which these pass unobserved they are purer and have more effect, more vitality, and that, consequently, the Sage arrived at this state has the truer fulness of life, life not spilled out in sensation but gathered closely within itself.

11. We shall perhaps be told that in such a state the man is no longer alive: we answer that these people show themselves equally unable to understand his inner life and his happiness.

If this does not satisfy them, we must ask them to keep in mind a living Sage and, under these terms, to enquire whether the man is in happiness: they must not whittle away his life and then ask whether he has the happy life; they must not take away man and then look for the happiness of a man: once they allow that the Sage lives within, they must not seek him among the outer activities, still less look to the outer world for the object of his desires. To consider the outer world to be a field to his desire, to fancy the Sage desiring any good external, would be to deny Substantial-Existence to happiness; for the Sage would like to see all men prosperous and no evil befalling anyone; but though it prove otherwise, he is still content.

If it be admitted that such a desire would be against reason, since evil cannot cease to be, there is no escape from agreeing with us that the Sage's will is set always and only inward.

12. The pleasure demanded for the life cannot be in the enjoyments of the licentious or in any gratifications of the body- there is no place for these, and they stifle happiness- nor in any violent emotions- what could so move the Sage?- it can be only such pleasure as there must be where Good is, pleasure that does not rise from movement and is not a thing of process, for all that is good is immediately present to the Sage and the Sage is present to himself: his pleasure, his contentment, stands, immovable.

Thus he is ever cheerful, the order of his life ever untroubled: his state is fixedly happy and nothing whatever of all that is known as evil can set it awry- given only that he is and remains a Sage.

If anyone seeks for some other kind of pleasure in the life of the Sage, it is not the life of the Sage he is looking for.

13. The characteristic activities are not hindered by outer events but merely adapt themselves, remaining always fine, and perhaps all the finer for dealing with the actual. When he has to handle particular cases and things, he may not be able to put his vision into act without searching and thinking, but the one greatest principle is ever present to him, like a part of his being- most of all present, should he be even a victim in the much-talked-of Bull of Phalaris. No doubt, despite all that has been said, it is idle to pretend that this is an agreeable lodging; but what cries in the Bull is the thing that feels the torture; in the Sage there is something else as well, The Self-Gathered which, as long as it holds itself by main force within itself, can never be robbed of the vision of the All-Good.

14. For man, and especially the Sage, is not the Couplement of soul and body: the proof is that man can be disengaged from the body and disdain its nominal goods.

It would be absurd to think that happiness begins and ends with the living-body: happiness is the possession of the good of life: it is centred therefore in Soul, is an Act of the Soul- and not of all the Soul at that: for it certainly is not characteristic of the vegetative soul, the soul of growth; that would at once connect it with the body.

A powerful frame, a healthy constitution, even a happy balance of temperament, these surely do not make felicity; in the excess of these advantages there is, even, the danger that the man be crushed down and forced more and more within their power. There must be a sort of counter-pressure in the other direction, towards the noblest: the body must be lessened, reduced, that the veritable man may show forth, the man behind the appearances.

Let the earth-bound man be handsome and powerful and rich, and so apt to this world that he may rule the entire human race: still there can be no envying him, the fool of such lures. Perhaps such splendours could not, from the beginning even, have gathered to the Sage; but if it should happen so, he of his own action will lower his state, if he has any care for his true life; the tyranny of the body he will work down or wear away by inattention to its claims; the rulership he will lay aside. While he will safeguard his bodily health, he will not wish to be wholly untried in sickness, still less never to feel pain: if such troubles should not come to him of themselves, he will wish to know them, during youth at least: in old age, it is true, he will desire neither pains nor pleasures to hamper him; he will desire nothing of this world, pleasant or painful; his one desire will be to know nothing of the body. If he should meet with pain he will pit against it the powers he holds to meet it; but pleasure and health and ease of life will not mean any increase of happiness to him nor will their contraries destroy or lessen it.

When in the one subject, a positive can add nothing, how can the negative take away?

15. But suppose two wise men, one of them possessing all that is supposed to be naturally welcome, while the other meets only with the very reverse: do we assert that they have an equal happiness?

We do, if they are equally wise.

What though the one be favoured in body and in all else that does not help towards wisdom, still less towards virtue, towards the vision of the noblest, towards being the highest, what does all that amount to? The man commanding all such practical advantages cannot flatter himself that he is more truly happy than the man without them: the utmost profusion of such boons would not help even to make a flute-player.

We discuss the happy man after our own feebleness; we count alarming and grave what his felicity takes lightly: he would be neither wise nor in the state of happiness if he had not quitted all trifling with such things and become as it were another being, having confidence in his own nature, faith that evil can never touch him. In such a spirit he can be fearless through and through; where there is dread, there is not perfect virtue; the man is some sort of a half-thing.

As for any involuntary fear rising in him and taking the judgement by surprise, while his thoughts perhaps are elsewhere, the Sage will attack it and drive it out; he will, so to speak, calm the refractory child within him, whether by reason or by menace, but without passion, as an infant might feel itself rebuked by a glance of severity.

This does not make the Sage unfriendly or harsh: it is to himself and in his own great concern that he is the Sage: giving freely to his intimates of all he has to give, he will be the best of friends by his very union with the Intellectual-Principle.

16. Those that refuse to place the Sage aloft in the Intellectual Realm but drag him down to the accidental, dreading accident for him, have substituted for the Sage we have in mind another person altogether; they offer us a tolerable sort of man and they assign to him a life of mingled good and ill, a case, after all, not easy to conceive. But admitting the possibility of such a mixed state, it could not be deserved to be called a life of happiness; it misses the Great, both in the dignity of Wisdom and in the integrity of Good. The life of true happiness is not a thing of mixture. And Plato rightly taught that he who is to be wise and to possess happiness draws his good from the Supreme, fixing his gaze on That, becoming like to That, living by That.

He can care for no other Term than That: all else he will attend to only as he might change his residence, not in expectation of any increase to his settled felicity, but simply in a reasonable attention to the differing conditions surrounding him as he lives here or there.

He will give to the body all that he sees to be useful and possible, but he himself remains a member of another order, not prevented from abandoning the body, necessarily leaving it at nature's hour, he himself always the master to decide in its regard.

Thus some part of his life considers exclusively the Soul's satisfaction; the rest is not immediately for the Term's sake and not for his own sake, but for the thing bound up with him, the thing which he tends and bears with as the musician cares for his lyre, as long as it can serve him: when the lyre fails him, he will change it, or will give up lyre and lyring, as having another craft now, one that needs no lyre, and then he will let it rest unregarded at his side while he sings on without an instrument. But it was not idly that the instrument was given him in the beginning: he has found it useful until now, many a time.

FIFTH TRACTATE.

HAPPINESS AND EXTENSION OF TIME.

1. Is it possible to think that Happiness increases with Time, Happiness which is always taken as a present thing?

The memory of former felicity may surely be ruled out of count, for Happiness is not a thing of words, but a definite condition which must be actually present like the very fact

and act of life.

2. It may be objected that our will towards living and towards expressive activity is constant, and that each attainment of such expression is an increase in Happiness.

But in the first place, by this reckoning every to-morrow's well-being will be greater than to-day's, every later instalment successively larger than an earlier; at once time supplants moral excellence as the measure of felicity.

Then again the Gods to-day must be happier than of old: and their bliss, too, is not perfect, will never be perfect. Further, when the will attains what it was seeking, it attains something present: the quest is always for something to be actually present until a standing felicity is definitely achieved. The will to life which is will to Existence aims at something present, since Existence must be a stably present thing. Even when the act of the will is directed towards the future, and the furthest future, its object is an actually present having and being: there is no concern about what is passed or to come: the future state a man seeks is to be a now to him; he does not care about the forever: he asks that an actual present be actually present.

3. Yes, but if the well-being has lasted a long time, if that present spectacle has been a longer time before the eyes?

If in the greater length of time the man has seen more deeply, time has certainly done something for him, but if all the process has brought him no further vision, then one glance would give all he has had.

4. Still the one life has known pleasure longer than the other?

But pleasure cannot be fairly reckoned in with Happiness- unless indeed by pleasure is meant the unhindered Act [of the true man], in which case this pleasure is simply our "Happiness." And even pleasure, though it exist continuously, has never anything but the present; its past is over and done with.

5. We are asked to believe, then, it will be objected, that if one man has been happy from first to last, another only at the last, and a third, beginning with happiness, has lost it, their shares are equal?

This is straying from the question: we were comparing the happy among themselves: now we are asked to compare the not-happy at the time when they are out of happiness with those in actual possession of happiness. If these last are better off, they are so as men in possession of happiness against men without it and their advantage is always by something in the present.

6. Well, but take the unhappy man: must not increase of time bring an increase of his unhappiness? Do not all troubles- long-lasting pains, sorrows, and everything of that type- yield a greater sum of misery in the longer time? And if thus in misery the evil is augmented by time why should not time equally augment happiness when all is well?

In the matter of sorrows and pains there is, no doubt, ground for saying that time brings increase: for example, in a lingering malady the evil hardens into a state, and as time goes on the body is brought lower and lower. But if the constitution did not deteriorate, if the mischief grew no worse, then, here too, there would be no trouble but that of the present moment: we cannot tell the past into the tale of unhappiness except in the sense that it has gone to make up an actually existing state- in the sense that, the evil in the sufferer's condition having been extended over a longer time, the mischief has gained ground. The increase of ill-being then is due to the aggravation of the malady not to the extension of time.

It may be pointed out also that this greater length of time is not a thing existent at any given moment; and surely a "more" is not to be made out by adding to something actually present something that has passed away.

No: true happiness is not vague and fluid: it is an unchanging state.

If there is in this matter any increase besides that of mere time, it is in the sense that a greater happiness is the reward of a higher virtue: this is not counting up to the credit of happiness the years of its continuance; it is simply noting the high-water mark once for all attained.

7. But if we are to consider only the present and may not call in the past to make the total, why do we not reckon so in the case of time itself, where, in fact, we do not hesitate to add the past to the present and call the total greater? Why not suppose a quantity of happiness equivalent to a quantity of time? This would be no more than taking it lap by lap to correspond with time-laps instead of choosing to consider it as an indivisible, measurable only by the content of a given instant.

There is no absurdity in taking count of time which has ceased to be: we are merely counting what is past and finished, as we might count the dead: but to treat past happiness as actually existent and as outweighing present happiness, that is an absurdity. For Happiness must be an achieved and existent state, whereas any time over and apart from the present is nonexistent: all progress of time means the extinction of all the time that has been.

Hence time is aptly described as a mimic of eternity that seeks to break up in its fragmentary flight the permanence of its exemplar. Thus whatever time seizes and seals to itself of what stands permanent in eternity is annihilated- saved only in so far as in some degree it still belongs to eternity, but wholly destroyed if it be unreservedly absorbed into time.

If Happiness demands the possession of the good of life, it clearly has to do with the life of Authentic-Existence for that life is the Best. Now the life of Authentic-Existence is measurable not by time but by eternity; and eternity is not a more or a less or a thing of any magnitude but is the unchangeable, the indivisible, is timeless Being.

We must not muddle together Being and Non-Being, time and eternity, not even everlasting time with the eternal; we cannot make laps and stages of an absolute unity; all must be taken together, wheresoever and howsoever we handle it; and it must be taken at that, not even as an undivided block of time but as the Life of Eternity, a stretch not made up of periods but completely rounded, outside of all notion of time.

8. It may be urged that the actual presence of past experiences, kept present by Memory, gives the advantage to the man of the longer felicity.

But, Memory of what sort of experiences?

Memory either of formerly attained wisdom and virtue- in which case we have a better man and the argument from memory is given up- or memory of past pleasures, as if the man that has arrived at felicity must roam far and wide in search of gratifications and is not contented by the bliss actually within him.

And what is there pleasant in the memory of pleasure? What is it to recall yesterday's excellent dinner? Still more ridiculous, one of ten years ago. So, too, of last year's morality.

9. But is there not something to be said for the memory of the various forms of beauty?

That is the resource of a man whose life is without beauty in the present, so that, for lack of it now, he grasps at the memory of what has been.

10. But, it may be said, length of time produces an abundance of good actions missed by the man whose attainment of the happy state is recent- if indeed we can think at all of a state of happiness where good actions have been few.

Now to make multiplicity, whether in time or in action, essential to Happiness is to put it together by combining non-existents, represented by the past, with some one thing that actually is. This consideration it was that led us at the very beginning to place Happiness in the actually existent and on that basis to launch our enquiry as to whether the higher degree was determined by the longer time. It might be thought that the Happiness of longer date must surpass the shorter by virtue of the greater number of acts it included.

But, to begin with, men quite outside of the active life may attain the state of felicity, and not in a less but in a greater degree than men of affairs.

Secondly, the good does not derive from the act itself but from the inner disposition which prompts the noble conduct: the wise and good man in his very action harvests the good not by what he does but by what he is.

A wicked man no less than a Sage may save the country, and the good of the act is for all alike, no matter whose was the saving hand. The contentment of the Sage does not hang upon such actions and events: it is his own inner habit that creates at once his

felicity and whatever pleasure may accompany it.

To put Happiness in actions is to put it in things that are outside virtue and outside the Soul; for the Soul's expression is not in action but in wisdom, in a contemplative operation within itself; and this, this alone, is Happiness.

SIXTH TRACTATE.

BEAUTY.

1. Beauty addresses itself chiefly to sight; but there is a beauty for the hearing too, as in certain combinations of words and in all kinds of music, for melodies and cadences are beautiful; and minds that lift themselves above the realm of sense to a higher order are aware of beauty in the conduct of life, in actions, in character, in the pursuits of the intellect; and there is the beauty of the virtues. What loftier beauty there may be, yet, our argument will bring to light.

What, then, is it that gives comeliness to material forms and draws the ear to the sweetness perceived in sounds, and what is the secret of the beauty there is in all that derives from Soul?

Is there some One Principle from which all take their grace, or is there a beauty peculiar to the embodied and another for the bodiless? Finally, one or many, what would such a Principle be?

Consider that some things, material shapes for instance, are gracious not by anything inherent but by something communicated, while others are lovely of themselves, as, for example, Virtue.

The same bodies appear sometimes beautiful, sometimes not; so that there is a good deal between being body and being beautiful.

What, then, is this something that shows itself in certain material forms? This is the natural beginning of our enquiry.

What is it that attracts the eyes of those to whom a beautiful object is presented, and calls them, lures them, towards it, and fills them with joy at the sight? If we possess ourselves of this, we have at once a standpoint for the wider survey.

Almost everyone declares that the symmetry of parts towards each other and towards a whole, with, besides, a certain charm of colour, constitutes the beauty recognized by the eye, that in visible things, as indeed in all else, universally, the beautiful thing is essentially symmetrical, patterned.

But think what this means.

Only a compound can be beautiful, never anything devoid of parts; and only a whole;

the several parts will have beauty, not in themselves, but only as working together to give a comely total. Yet beauty in an aggregate demands beauty in details; it cannot be constructed out of ugliness; its law must run throughout.

All the loveliness of colour and even the light of the sun, being devoid of parts and so not beautiful by symmetry, must be ruled out of the realm of beauty. And how comes gold to be a beautiful thing? And lightning by night, and the stars, why are these so fair?

In sounds also the simple must be proscribed, though often in a whole noble composition each several tone is delicious in itself.

Again since the one face, constant in symmetry, appears sometimes fair and sometimes not, can we doubt that beauty is something more than symmetry, that symmetry itself owes its beauty to a remoter principle?

Turn to what is attractive in methods of life or in the expression of thought; are we to call in symmetry here? What symmetry is to be found in noble conduct, or excellent laws, in any form of mental pursuit?

What symmetry can there be in points of abstract thought?

The symmetry of being accordant with each other? But there may be accordance or entire identity where there is nothing but ugliness: the proposition that honesty is merely a generous artlessness chimes in the most perfect harmony with the proposition that morality means weakness of will; the accordance is complete.

Then again, all the virtues are a beauty of the soul, a beauty authentic beyond any of these others; but how does symmetry enter here? The soul, it is true, is not a simple unity, but still its virtue cannot have the symmetry of size or of number: what standard of measurement could preside over the compromise or the coalescence of the soul's faculties or purposes?

Finally, how by this theory would there be beauty in the Intellectual-Principle, essentially the solitary?

2. Let us, then, go back to the source, and indicate at once the Principle that bestows beauty on material things.

Undoubtedly this Principle exists; it is something that is perceived at the first glance, something which the soul names as from an ancient knowledge and, recognising, welcomes it, enters into unison with it.

But let the soul fall in with the Ugly and at once it shrinks within itself, denies the thing, turns away from it, not accordant, resenting it.

Our interpretation is that the soul- by the very truth of its nature, by its affiliation to the noblest Existents in the hierarchy of Being- when it sees anything of that kin, or any

trace of that kinship, thrills with an immediate delight, takes its own to itself, and thus stirs anew to the sense of its nature and of all its affinity.

But, is there any such likeness between the loveliness of this world and the splendours in the Supreme? Such a likeness in the particulars would make the two orders alike: but what is there in common between beauty here and beauty There?

We hold that all the loveliness of this world comes by communion in Ideal-Form.

All shapelessness whose kind admits of pattern and form, as long as it remains outside of Reason and Idea, is ugly by that very isolation from the Divine-Thought. And this is the Absolute Ugly: an ugly thing is something that has not been entirely mastered by pattern, that is by Reason, the Matter not yielding at all points and in all respects to Ideal-Form.

But where the Ideal-Form has entered, it has grouped and coordinated what from a diversity of parts was to become a unity: it has rallied confusion into co-operation: it has made the sum one harmonious coherence: for the Idea is a unity and what it moulds must come to unity as far as multiplicity may.

And on what has thus been compacted to unity, Beauty enthrones itself, giving itself to the parts as to the sum: when it lights on some natural unity, a thing of like parts, then it gives itself to that whole. Thus, for an illustration, there is the beauty, conferred by craftsmanship, of all a house with all its parts, and the beauty which some natural quality may give to a single stone.

This, then, is how the material thing becomes beautiful- by communicating in the thought that flows from the Divine.

3. And the soul includes a faculty peculiarly addressed to Beauty- one incomparably sure in the appreciation of its own, never in doubt whenever any lovely thing presents itself for judgement.

Or perhaps the soul itself acts immediately, affirming the Beautiful where it finds something accordant with the Ideal-Form within itself, using this Idea as a canon of accuracy in its decision.

But what accordance is there between the material and that which antedates all Matter?

On what principle does the architect, when he finds the house standing before him correspondent with his inner ideal of a house, pronounce it beautiful? Is it not that the house before him, the stones apart, is the inner idea stamped upon the mass of exterior matter, the indivisible exhibited in diversity?

So with the perceptive faculty: discerning in certain objects the Ideal-Form which has bound and controlled shapeless matter, opposed in nature to Idea, seeing further stamped upon the common shapes some shape excellent above the common, it

gathers into unity what still remains fragmentary, catches it up and carries it within, no longer a thing of parts, and presents it to the Ideal-Principle as something concordant and congenial, a natural friend: the joy here is like that of a good man who discerns in a youth the early signs of a virtue consonant with the achieved perfection within his own soul.

The beauty of colour is also the outcome of a unification: it derives from shape, from the conquest of the darkness inherent in Matter by the pouring-in of light, the unembodied, which is a Rational-Principle and an Ideal-Form.

Hence it is that Fire itself is splendid beyond all material bodies, holding the rank of Ideal-Principle to the other elements, making ever upwards, the subtlest and sprightliest of all bodies, as very near to the unembodied; itself alone admitting no other, all the others penetrated by it: for they take warmth but this is never cold; it has colour primally; they receive the Form of colour from it: hence the splendour of its light, the splendour that belongs to the Idea. And all that has resisted and is but uncertainly held by its light remains outside of beauty, as not having absorbed the plenitude of the Form of colour.

And harmonies unheard in sound create the harmonies we hear, and wake the soul to the consciousness of beauty, showing it the one essence in another kind: for the measures of our sensible music are not arbitrary but are determined by the Principle whose labour is to dominate Matter and bring pattern into being.

Thus far of the beauties of the realm of sense, images and shadow-pictures, fugitives that have entered into Matter- to adorn, and to ravish, where they are seen.

4. But there are earlier and loftier beauties than these. In the sense-bound life we are no longer granted to know them, but the soul, taking no help from the organs, sees and proclaims them. To the vision of these we must mount, leaving sense to its own low place.

As it is not for those to speak of the graceful forms of the material world who have never seen them or known their grace- men born blind, let us suppose- in the same way those must be silent upon the beauty of noble conduct and of learning and all that order who have never cared for such things, nor may those tell of the splendour of virtue who have never known the face of Justice and of Moral-Wisdom beautiful beyond the beauty of Evening and of dawn.

Such vision is for those only who see with the Soul's sight- and at the vision, they will rejoice, and awe will fall upon them and a trouble deeper than all the rest could ever stir, for now they are moving in the realm of Truth.

This is the spirit that Beauty must ever induce, wonderment and a delicious trouble, longing and love and a trembling that is all delight. For the unseen all this may be felt as for the seen; and this the Souls feel for it, every soul in some degree, but those the more deeply that are the more truly apt to this higher love- just as all take delight in the beauty of the body but all are not stung as sharply, and those only that feel the keener

wound are known as Lovers.

5. These Lovers, then, lovers of the beauty outside of sense, must be made to declare themselves.

What do you feel in presence of the grace you discern in actions, in manners, in sound morality, in all the works and fruits of virtue, in the beauty of souls? When you see that you yourselves are beautiful within, what do you feel? What is this Dionysiac exultation that thrills through your being, this straining upwards of all your Soul, this longing to break away from the body and live sunken within the veritable self?

These are no other than the emotions of Souls under the spell of love.

But what is it that awakens all this passion? No shape, no colour, no grandeur of mass: all is for a Soul, something whose beauty rests upon no colour, for the moral wisdom the Soul enshrines and all the other hueless splendour of the virtues. It is that you find in yourself, or admire in another, loftiness of spirit; righteousness of life; disciplined purity; courage of the majestic face; gravity; modesty that goes fearless and tranquil and passionless; and, shining down upon all, the light of god-like Intellection.

All these noble qualities are to be revered and loved, no doubt, but what entitles them to be called beautiful?

They exist: they manifest themselves to us: anyone that sees them must admit that they have reality of Being; and is not Real-Being, really beautiful?

But we have not yet shown by what property in them they have wrought the Soul to loveliness: what is this grace, this splendour as of Light, resting upon all the virtues?

Let us take the contrary, the ugliness of the Soul, and set that against its beauty: to understand, at once, what this ugliness is and how it comes to appear in the Soul will certainly open our way before us.

Let us then suppose an ugly Soul, dissolute, unrighteous: teeming with all the lusts; torn by internal discord; beset by the fears of its cowardice and the envies of its pettiness; thinking, in the little thought it has, only of the perishable and the base; perverse in all its the friend of unclean pleasures; living the life of abandonment to bodily sensation and delighting in its deformity.

What must we think but that all this shame is something that has gathered about the Soul, some foreign bane outraging it, soiling it, so that, encumbered with all manner of turpitude, it has no longer a clean activity or a clean sensation, but commands only a life smouldering dully under the crust of evil; that, sunk in manifold death, it no longer sees what a Soul should see, may no longer rest in its own being, dragged ever as it is towards the outer, the lower, the dark?

An unclean thing, I dare to say; flickering hither and thither at the call of objects of

sense, deeply infected with the taint of body, occupied always in Matter, and absorbing Matter into itself; in its commerce with the Ignoble it has trafficked away for an alien nature its own essential Idea.

If a man has been immersed in filth or daubed with mud his native comeliness disappears and all that is seen is the foul stuff besmearing him: his ugly condition is due to alien matter that has encrusted him, and if he is to win back his grace it must be his business to scour and purify himself and make himself what he was.

So, we may justly say, a Soul becomes ugly- by something foisted upon it, by sinking itself into the alien, by a fall, a descent into body, into Matter. The dishonour of the Soul is in its ceasing to be clean and apart. Gold is degraded when it is mixed with earthy particles; if these be worked out, the gold is left and is beautiful, isolated from all that is foreign, gold with gold alone. And so the Soul; let it be but cleared of the desires that come by its too intimate converse with the body, emancipated from all the passions, purged of all that embodiment has thrust upon it, withdrawn, a solitary, to itself again- in that moment the ugliness that came only from the alien is stripped away.

6. For, as the ancient teaching was, moral-discipline and courage and every virtue, not even excepting Wisdom itself, all is purification.

Hence the Mysteries with good reason adumbrate the immersion of the unpurified in filth, even in the Nether-World, since the unclean loves filth for its very filthiness, and swine foul of body find their joy in foulness.

What else is Sophrosyne, rightly so-called, but to take no part in the pleasures of the body, to break away from them as unclean and unworthy of the clean? So too, Courage is but being fearless of the death which is but the parting of the Soul from the body, an event which no one can dread whose delight is to be his unmingled self. And Magnanimity is but disregard for the lure of things here. And Wisdom is but the Act of the Intellectual-Principle withdrawn from the lower places and leading the Soul to the Above.

The Soul thus cleansed is all Idea and Reason, wholly free of body, intellectual, entirely of that divine order from which the wellspring of Beauty rises and all the race of Beauty.

Hence the Soul heightened to the Intellectual-Principle is beautiful to all its power. For Intellection and all that proceeds from Intellection are the Soul's beauty, a graciousness native to it and not foreign, for only with these is it truly Soul. And it is just to say that in the Soul's becoming a good and beautiful thing is its becoming like to God, for from the Divine comes all the Beauty and all the Good in beings.

We may even say that Beauty is the Authentic-Existents and Ugliness is the Principle contrary to Existence: and the Ugly is also the primal evil; therefore its contrary is at once good and beautiful, or is Good and Beauty: and hence the one method will discover to us the Beauty-Good and the Ugliness-Evil.

And Beauty, this Beauty which is also The Good, must be posed as The First: directly deriving from this First is the Intellectual-Principle which is pre-eminently the manifestation of Beauty; through the Intellectual-Principle Soul is beautiful. The beauty in things of a lower order-actions and pursuits for instance- comes by operation of the shaping Soul which is also the author of the beauty found in the world of sense. For the Soul, a divine thing, a fragment as it were of the Primal Beauty, makes beautiful to the fulness of their capacity all things whatsoever that it grasps and moulds.

7. Therefore we must ascend again towards the Good, the desired of every Soul. Anyone that has seen This, knows what I intend when I say that it is beautiful. Even the desire of it is to be desired as a Good. To attain it is for those that will take the upward path, who will set all their forces towards it, who will divest themselves of all that we have put on in our descent:- so, to those that approach the Holy Celebrations of the Mysteries, there are appointed purifications and the laying aside of the garments worn before, and the entry in nakedness- until, passing, on the upward way, all that is other than the God, each in the solitude of himself shall behold that solitary-dwelling Existence, the Apart, the Unmingled, the Pure, that from Which all things depend, for Which all look and live and act and know, the Source of Life and of Intellection and of Being.

And one that shall know this vision- with what passion of love shall he not be seized, with what pang of desire, what longing to be molten into one with This, what wondering delight! If he that has never seen this Being must hunger for It as for all his welfare, he that has known must love and reverence It as the very Beauty; he will be flooded with awe and gladness, stricken by a salutary terror; he loves with a veritable love, with sharp desire; all other loves than this he must despise, and disdain all that once seemed fair.

This, indeed, is the mood even of those who, having witnessed the manifestation of Gods or Supernals, can never again feel the old delight in the comeliness of material forms: what then are we to think of one that contemplates Absolute Beauty in Its essential integrity, no accumulation of flesh and matter, no dweller on earth or in the heavens- so perfect Its purity- far above all such things in that they are non-essential, composite, not primal but descending from This?

Beholding this Being- the Choragos of all Existence, the Self-Intent that ever gives forth and never takes- resting, rapt, in the vision and possession of so lofty a loveliness, growing to Its likeness, what Beauty can the soul yet lack? For This, the Beauty supreme, the absolute, and the primal, fashions Its lovers to Beauty and makes them also worthy of love.

And for This, the sternest and the uttermost combat is set before the Souls; all our labour is for This, lest we be left without part in this noblest vision, which to attain is to be blessed in the blissful sight, which to fail of is to fail utterly.

For not he that has failed of the joy that is in colour or in visible forms, not he that has failed of power or of honours or of kingdom has failed, but only he that has failed of only

This, for Whose winning he should renounce kingdoms and command over earth and ocean and sky, if only, spurning the world of sense from beneath his feet, and straining to This, he may see.

8. But what must we do? How lies the path? How come to vision of the inaccessible Beauty, dwelling as if in consecrated precincts, apart from the common ways where all may see, even the profane?

He that has the strength, let him arise and withdraw into himself, foregoing all that is known by the eyes, turning away for ever from the material beauty that once made his joy. When he perceives those shapes of grace that show in body, let him not pursue: he must know them for copies, vestiges, shadows, and hasten away towards That they tell of. For if anyone follow what is like a beautiful shape playing over water- is there not a myth telling in symbol of such a dupe, how he sank into the depths of the current and was swept away to nothingness? So too, one that is held by material beauty and will not break free shall be precipitated, not in body but in Soul, down to the dark depths loathed of the Intellective-Being, where, blind even in the Lower-World, he shall have commerce only with shadows, there as here.

“Let us flee then to the beloved Fatherland”: this is the soundest counsel. But what is this flight? How are we to gain the open sea? For Odysseus is surely a parable to us when he commands the flight from the sorceries of Circe or Calypso- not content to linger for all the pleasure offered to his eyes and all the delight of sense filling his days.

The Fatherland to us is There whence we have come, and There is The Father.

What then is our course, what the manner of our flight? This is not a journey for the feet; the feet bring us only from land to land; nor need you think of coach or ship to carry you away; all this order of things you must set aside and refuse to see: you must close the eyes and call instead upon another vision which is to be waked within you, a vision, the birth-right of all, which few turn to use.

9. And this inner vision, what is its operation?

Newly awakened it is all too feeble to bear the ultimate splendour. Therefore the Soul must be trained- to the habit of remarking, first, all noble pursuits, then the works of beauty produced not by the labour of the arts but by the virtue of men known for their goodness: lastly, you must search the souls of those that have shaped these beautiful forms.

But how are you to see into a virtuous soul and know its loveliness?

Withdraw into yourself and look. And if you do not find yourself beautiful yet, act as does the creator of a statue that is to be made beautiful: he cuts away here, he smooths there, he makes this line lighter, this other purer, until a lovely face has grown upon his work. So do you also: cut away all that is excessive, straighten all that is crooked, bring light to all that is overcast, labour to make all one glow of beauty and never cease

chiselling your statue, until there shall shine out on you from it the godlike splendour of virtue, until you shall see the perfect goodness surely established in the stainless shrine.

When you know that you have become this perfect work, when you are self-gathered in the purity of your being, nothing now remaining that can shatter that inner unity, nothing from without clinging to the authentic man, when you find yourself wholly true to your essential nature, wholly that only veritable Light which is not measured by space, not narrowed to any circumscribed form nor again diffused as a thing void of term, but ever unmeasurable as something greater than all measure and more than all quantity- when you perceive that you have grown to this, you are now become very vision: now call up all your confidence, strike forward yet a step- you need a guide no longer- strain, and see.

This is the only eye that sees the mighty Beauty. If the eye that adventures the vision be dimmed by vice, impure, or weak, and unable in its cowardly blenching to see the uttermost brightness, then it sees nothing even though another point to what lies plain to sight before it. To any vision must be brought an eye adapted to what is to be seen, and having some likeness to it. Never did eye see the sun unless it had first become sunlike, and never can the soul have vision of the First Beauty unless itself be beautiful.

Therefore, first let each become godlike and each beautiful who cares to see God and Beauty. So, mounting, the Soul will come first to the Intellectual-Principle and survey all the beautiful Ideas in the Supreme and will avow that this is Beauty, that the Ideas are Beauty. For by their efficacy comes all Beauty else, but the offspring and essence of the Intellectual-Being. What is beyond the Intellectual-Principle we affirm to be the nature of Good radiating Beauty before it. So that, treating the Intellectual-Kosmos as one, the first is the Beautiful: if we make distinction there, the Realm of Ideas constitutes the Beauty of the Intellectual Sphere; and The Good, which lies beyond, is the Fountain at once and Principle of Beauty: the Primal Good and the Primal Beauty have the one dwelling-place and, thus, always, Beauty's seat is There.

SEVENTH TRACTATE.

ON THE PRIMAL GOOD AND SECONDARY FORMS OF GOOD

[OTHERWISE, "ON HAPPINESS"].

1. We can scarcely conceive that for any entity the Good can be other than the natural Act expressing its life-force, or in the case of an entity made up of parts the Act, appropriate, natural and complete, expressive of that in it which is best.

For the Soul, then, the Good is its own natural Act.

But the Soul itself is natively a "Best"; if, further, its act be directed towards the Best, the achievement is not merely the "Soul's good" but "The Good" without qualification.

Now, given an Existent which- as being itself the best of existences and even transcending the existences- directs its Act towards no other, but is the object to which the Act of all else is directed, it is clear that this must be at once the Good and the means through which all else may participate in Good.

This Absolute Good other entities may possess in two ways- by becoming like to It and by directing the Act of their being towards It.

Now, if all aspiration and Act whatsoever are directed towards the Good, it follows that the Essential-Good neither need nor can look outside itself or aspire to anything other than itself: it can but remain unmoved, as being, in the constitution of things, the wellspring and firstcause of all Act: whatsoever in other entities is of the nature of Good cannot be due to any Act of the Essential-Good upon them; it is for them on the contrary to act towards their source and cause. The Good must, then, be the Good not by any Act, not even by virtue of its Intellection, but by its very rest within Itself.

Existing beyond and above Being, it must be beyond and above the Intellectual-Principle and all Intellection.

For, again, that only can be named the Good to which all is bound and itself to none: for only thus is it veritably the object of all aspiration. It must be unmoved, while all circles around it, as a circumference around a centre from which all the radii proceed. Another example would be the sun, central to the light which streams from it and is yet linked to it, or at least is always about it, irremoveably; try all you will to separate the light from the sun, or the sun from its light, for ever the light is in the sun.

2. But the Universe outside; how is it aligned towards the Good?

The soulless by direction toward Soul: Soul towards the Good itself, through the Intellectual-Principle.

Everything has something of the Good, by virtue of possessing a certain degree of unity and a certain degree of Existence and by participation in Ideal-Form: to the extent of the Unity, Being, and Form which are present, there is a sharing in an image, for the Unity and Existence in which there is participation are no more than images of the Ideal-Form.

With Soul it is different; the First-Soul, that which follows upon the Intellectual-Principle, possesses a life nearer to the Verity and through that Principle is of the nature of good; it will actually possess the Good if it orientate itself towards the Intellectual-Principle, since this follows immediately upon the Good.

In sum, then, life is the Good to the living, and the Intellectual-Principle to what is intellectual; so that where there is life with intellection there is a double contact with the Good.

3. But if life is a good, is there good for all that lives?

No: in the vile, life limps: it is like the eye to the dim-sighted; it fails of its task.

But if the mingled strand of life is to us, though entwined with evil, still in the total a good, must not death be an evil?

Evil to What? There must be a subject for the evil: but if the possible subject is no longer among beings, or, still among beings, is devoid of life... why, a stone is not more immune.

If, on the contrary, after death life and soul continue, then death will be no evil but a good; Soul, disembodied, is the freer to ply its own Act.

If it be taken into the All-Soul- what evil can reach it There? And as the Gods are possessed of Good and untouched by evil- so, certainly is the Soul that has preserved its essential character. And if it should lose its purity, the evil it experiences is not in its death but in its life. Suppose it to be under punishment in the lower world, even there the evil thing is its life and not its death; the misfortune is still life, a life of a definite character.

Life is a partnership of a Soul and body; death is the dissolution; in either life or death, then, the Soul will feel itself at home.

But, again, if life is good, how can death be anything but evil?

Remember that the good of life, where it has any good at all, is not due to anything in the partnership but to the repelling of evil by virtue; death, then, must be the greater good.

In a word, life in the body is of itself an evil but the Soul enters its Good through Virtue, not living the life of the Couplement but holding itself apart, even here.

EIGHTH TRACTATE.

ON THE NATURE AND SOURCE OF EVIL.

1. Those enquiring whence Evil enters into beings, or rather into a certain order of beings, would be making the best beginning if they established, first of all, what precisely Evil is, what constitutes its Nature. At once we should know whence it comes, where it has its native seat and where it is present merely as an accident; and there would be no further question as to whether it has Authentic-Existence.

But a difficulty arises. By what faculty in us could we possibly know Evil?

All knowing comes by likeness. The Intellectual-Principle and the Soul, being Ideal-Forms, would know Ideal-Forms and would have a natural tendency towards them; but who could imagine Evil to be an Ideal-Form, seeing that it manifests itself as the very absence of Good?

If the solution is that the one act of knowing covers contraries, and that as Evil is the contrary to Good the one act would grasp Good and Evil together, then to know Evil there must be first a clear perception and understanding of Good, since the nobler existences precede the baser and are Ideal-Forms while the less good hold no such standing, are nearer to Non-Being.

No doubt there is a question in what precise way Good is contrary to Evil- whether it is as First-Principle to last of things or as Ideal-Form to utter Lack: but this subject we postpone.

2. For the moment let us define the nature of the Good as far as the immediate purpose demands.

The Good is that on which all else depends, towards which all Existences aspire as to their source and their need, while Itself is without need, sufficient to Itself, aspiring to no other, the measure and Term of all, giving out from itself the Intellectual-Principle and Existence and Soul and Life and all Intellective-Act.

All until The Good is reached is beautiful; The Good is beyond-beautiful, beyond the Highest, holding kingly state in the Intellectual-Kosmos, that sphere constituted by a Principle wholly unlike what is known as Intelligence in us. Our intelligence is nourished on the propositions of logic, is skilled in following discussions, works by reasonings, examines links of demonstration, and comes to know the world of Being also by the steps of logical process, having no prior grasp of Reality but remaining empty, all Intelligence though it be, until it has put itself to school.

The Intellectual-Principle we are discussing is not of such a kind: It possesses all: It is all: It is present to all by Its self-presence: It has all by other means than having, for what It possesses is still Itself, nor does any particular of all within It stand apart; for every such particular is the whole and in all respects all, while yet not confused in the mass but still distinct, apart to the extent that any participant in the Intellectual-Principle participates not in the entire as one thing but in whatsoever lies within its own reach.

And the First Act is the Act of The Good stationary within Itself, and the First Existence is the self-contained Existence of The Good; but there is also an Act upon It, that of the Intellectual-Principle which, as it were, lives about It.

And the Soul, outside, circles around the Intellectual-Principle, and by gazing upon it, seeing into the depths of It, through It sees God.

Such is the untroubled, the blissful, life of divine beings, and Evil has no place in it; if this were all, there would be no Evil but Good only, the first, the second and the third Good. All, thus far, is with the King of All, unfailing Cause of Good and Beauty and controller of all; and what is Good in the second degree depends upon the Second-Principle and tertiary Good upon the Third.

3. If such be the Nature of Beings and of That which transcends all the realm of Being, Evil cannot have place among Beings or in the Beyond-Being; these are good.

There remains, only, if Evil exist at all, that it be situate in the realm of Non-Being, that it be some mode, as it were, of the Non-Being, that it have its seat in something in touch with Non-Being or to a certain degree communicate in Non-Being.

By this Non-Being, of course, we are not to understand something that simply does not exist, but only something of an utterly different order from Authentic-Being: there is no question here of movement or position with regard to Being; the Non-Being we are thinking of is, rather, an image of Being or perhaps something still further removed than even an image.

Now this [the required faint image of Being] might be the sensible universe with all the impressions it engenders, or it might be something of even later derivation, accidental to the realm of sense, or again, it might be the source of the sense-world or something of the same order entering into it to complete it.

Some conception of it would be reached by thinking of measurelessness as opposed to measure, of the unbounded against bound, the unshaped against a principle of shape, the ever-needy against the self-sufficing: think of the ever-undefined, the never at rest, the all-accepting but never sated, utter dearth; and make all this character not mere accident in it but its equivalent for essential-being, so that, whatsoever fragment of it be taken, that part is all lawless void, while whatever participates in it and resembles it becomes evil, though not of course to the point of being, as itself is, Evil-Absolute.

In what substantial-form [hypostasis] then is all this to be found- not as accident but as the very substance itself?

For if Evil can enter into other things, it must have in a certain sense a prior existence, even though it may not be an essence. As there is Good, the Absolute, as well as Good, the quality, so, together with the derived evil entering into something not itself, there must be the Absolute Evil.

But how? Can there be Unmeasure apart from an unmeasured object?

Does not Measure exist apart from unmeasured things? Precisely as there is Measure apart from anything measured, so there is Unmeasure apart from the unmeasured. If Unmeasure could not exist independently, it must exist either in an unmeasured object or in something measured; but the unmeasured could not need Unmeasure and the measured could not contain it.

There must, then, be some Undetermination-Absolute, some Absolute Formlessness; all the qualities cited as characterizing the Nature of Evil must be summed under an Absolute Evil; and every evil thing outside of this must either contain this Absolute by saturation or have taken the character of evil and become a cause of evil by consecration to this Absolute.

What will this be?

That Kind whose place is below all the patterns, forms, shapes, measurements and limits, that which has no trace of good by any title of its own, but [at best] takes order and grace from some Principle outside itself, a mere image as regards Absolute-Being but the Authentic Essence of Evil- in so far as Evil can have Authentic Being. In such a Kind, Reason recognizes the Primal Evil, Evil Absolute.

4. The bodily Kind, in that it partakes of Matter is an evil thing. What form is in bodies is an untrue-form: they are without life: by their own natural disorderly movement they make away with each other; they are hindrances to the soul in its proper Act; in their ceaseless flux they are always slipping away from Being.

Soul, on the contrary, since not every Soul is evil, is not an evil Kind.

What, then, is the evil Soul?

It is, we read, the Soul that has entered into the service of that in which soul-evil is implanted by nature, in whose service the unreasoning phase of the Soul accepts evil-unmeasure, excess and shortcoming, which bring forth licentiousness, cowardice and all other flaws of the Soul, all the states, foreign to the true nature, which set up false judgements, so that the Soul comes to name things good or evil not by their true value but by the mere test of like and dislike.

But what is the root of this evil state? how can it be brought under the causing principle indicated?

Firstly, such a Soul is not apart from Matter, is not purely itself. That is to say, it is touched with Unmeasure, it is shut out from the Forming-Idea that orders and brings to measure, and this because it is merged into a body made of Matter.

Then if the Reasoning-Faculty too has taken hurt, the Soul's seeing is baulked by the passions and by the darkening that Matter brings to it, by its decline into Matter, by its very attention no longer to Essence but to Process- whose principle or source is, again, Matter, the Kind so evil as to saturate with its own pravity even that which is not in it but merely looks towards it.

For, wholly without part in Good, the negation of Good, unmingled Lack, this Matter-Kind makes over to its own likeness whatsoever comes in touch with it.

The Soul wrought to perfection, addressed towards the Intellectual-Principle, is steadfastly pure: it has turned away from Matter; all that is undetermined, that is outside of measure, that is evil, it neither sees nor draws near; it endures in its purity, only, and wholly, determined by the Intellectual-Principle.

The Soul that breaks away from this source of its reality to the non-perfect and

non-primal is, as it were, a secondary, an image, to the loyal Soul. By its falling-away- and to the extent of the fall- it is stripped of Determination, becomes wholly indeterminate, sees darkness. Looking to what repels vision, as we look when we are said to see darkness, it has taken Matter into itself.

5. But, it will be objected, if this seeing and frequenting of the darkness is due to the lack of good, the Soul's evil has its source in that very lack; the darkness will be merely a secondary cause- and at once the Principle of Evil is removed from Matter, is made anterior to Matter.

No: Evil is not in any and every lack; it is in absolute lack. What falls in some degree short of the Good is not Evil; considered in its own kind it might even be perfect, but where there is utter dearth, there we have Essential Evil, void of all share in Good; this is the case with Matter.

Matter has not even existence whereby to have some part in Good: Being is attributed to it by an accident of words: the truth would be that it has Non-Being.

Mere lack brings merely Not-Goodness: Evil demands the absolute lack- though, of course, any very considerable shortcoming makes the ultimate fall possible and is already, in itself, an evil.

In fine we are not to think of Evil as some particular bad thing- injustice, for example, or any other ugly trait- but as a principle distinct from any of the particular forms in which, by the addition of certain elements, it becomes manifest. Thus there may be wickedness in the Soul; the forms this general wickedness is to take will be determined by the envioning Matter, by the faculties of the Soul that operate and by the nature of their operation, whether seeing, acting, or merely admitting impression.

But supposing things external to the Soul are to be counted Evil- sickness, poverty and so forth- how can they be referred to the principle we have described?

Well, sickness is excess or defect in the body, which as a material organism rebels against order and measure; ugliness is but matter not mastered by Ideal-Form; poverty consists in our need and lack of goods made necessary to us by our association with Matter whose very nature is to be one long want.

If all this be true, we cannot be, ourselves, the source of Evil, we are not evil in ourselves; Evil was before we came to be; the Evil which holds men down binds them against their will; and for those that have the strength- not found in all men, it is true- there is a deliverance from the evils that have found lodgement in the soul.

In a word since Matter belongs only to the sensible world, vice in men is not the Absolute Evil; not all men are vicious; some overcome vice, some, the better sort, are never attacked by it; and those who master it win by means of that in them which is not material.

6. If this be so, how do we explain the teaching that evils can never pass away but “exist of necessity,” that “while evil has no place in the divine order, it haunts mortal nature and this place for ever”?

Does this mean that heaven is clear of evil, ever moving its orderly way, spinning on the appointed path, no injustice there or any flaw, no wrong done by any power to any other but all true to the settled plan, while injustice and disorder prevail on earth, designated as “the Mortal Kind and this Place”?

Not quite so: for the precept to “flee hence” does not refer to earth and earthly life. The flight we read of consists not in quitting earth but in living our earth-life “with justice and piety in the light of philosophy”; it is vice we are to flee, so that clearly to the writer Evil is simply vice with the sequels of vice. And when the disputant in that dialogue says that, if men could be convinced of the doctrine advanced, there would be an end of Evil, he is answered, “That can never be: Evil is of necessity, for there must be a contrary to good.”

Still we may reasonably ask how can vice in man be a contrary to The Good in the Supernal: for vice is the contrary to virtue and virtue is not The Good but merely the good thing by which Matter is brought to order.

How can there any contrary to the Absolute Good, when the absolute has no quality?

Besides, is there any universal necessity that the existence of one of two contraries should entail the existence of the other? Admit that the existence of one is often accompanied by the existence of the other- sickness and health, for example- yet there is no universal compulsion.

Perhaps, however, our author did not mean that this was universally true; he is speaking only of The Good.

But then, if The Good is an essence, and still more, if It is that which transcends all existence, how can It have any contrary?

That there is nothing contrary to essence is certain in the case of particular existences- established by practical proof- but not in the quite different case of the Universal.

But of what nature would this contrary be, the contrary to universal existence and in general to the Primals?

To essential existence would be opposed the non-existence; to the nature of Good, some principle and source of evil. Both these will be sources, the one of what is good, the other of what is evil; and all within the domain of the one principle is opposed, as contrary, to the entire domain of the other, and this in a contrariety more violent than any existing between secondary things.

For these last are opposed as members of one species or of one genus, and, within that

common ground, they participate in some common quality.

In the case of the Primals or Universals there is such complete separation that what is the exact negation of one group constitutes the very nature of the other; we have diametric contrariety if by contrariety we mean the extreme of remoteness.

Now to the content of the divine order, the fixed quality, the measuredness and so forth—there is opposed the content of the evil principle, its unfixedness, measurelessness and so forth: total is opposed to total. The existence of the one genus is a falsity, primarily, essentially, a falseness: the other genus has Essence-Authentic: the opposition is of truth to lie; essence is opposed to essence.

Thus we see that it is not universally true that an Essence can have no contrary.

In the case of fire and water we would admit contrariety if it were not for their common element, the Matter, about which are gathered the warmth and dryness of one and the dampness and cold of the other: if there were only present what constitutes their distinct kinds, the common ground being absent, there would be, here also, essence contrary to essence.

In sum, things utterly sundered, having nothing in common, standing at the remotest poles, are opposites in nature: the contrariety does not depend upon quality or upon the existence of a distinct genus of beings, but upon the utmost difference, clash in content, clash in effect.

7. But why does the existence of the Principle of Good necessarily comport the existence of a Principle of Evil? Is it because the All necessarily comports the existence of Matter? Yes: for necessarily this All is made up of contraries: it could not exist if Matter did not. The Nature of this Kosmos is, therefore, a blend; it is blended from the Intellectual-Principle and Necessity: what comes into it from God is good; evil is from the Ancient Kind which, we read, is the underlying Matter not yet brought to order by the Ideal-Form.

But, since the expression “this place” must be taken to mean the All, how explain the words “mortal nature”?

The answer is in the passage [in which the Father of Gods addresses the Divinities of the lower sphere], “Since you possess only a derivative being, you are not immortals... but by my power you shall escape dissolution.”

The escape, we read, is not a matter of place, but of acquiring virtue, of disengaging the self from the body; this is the escape from Matter. Plato explains somewhere how a man frees himself and how he remains bound; and the phrase “to live among the gods” means to live among the Intelligible-Existents, for these are the Immortals.

There is another consideration establishing the necessary existence of Evil.

Given that The Good is not the only existent thing, it is inevitable that, by the outgoing from it or, if the phrase be preferred, the continuous down-going or away-going from it, there should be produced a Last, something after which nothing more can be produced: this will be Evil.

As necessarily as there is Something after the First, so necessarily there is a Last: this Last is Matter, the thing which has no residue of good in it: here is the necessity of Evil.

8. But there will still be some to deny that it is through this Matter that we ourselves become evil.

They will say that neither ignorance nor wicked desires arise in Matter. Even if they admit that the unhappy condition within us is due to the pravity inherent in body, they will urge that still the blame lies not in the Matter itself but with the Form present in it- such Form as heat, cold, bitterness, saltiness and all other conditions perceptible to sense, or again such states as being full or void- not in the concrete signification but in the presence or absence of just such forms. In a word, they will argue, all particularity in desires and even in perverted judgements upon things, can be referred to such causes, so that Evil lies in this Form much more than in the mere Matter.

Yet, even with all this, they can be compelled to admit that Matter is the Evil.

For, the quality [form] that has entered into Matter does not act as an entity apart from the Matter, any more than axe-shape will cut apart from iron. Further, Forms lodged in Matter are not the same as they would be if they remained within themselves; they are Reason-Principles Materialized, they are corrupted in the Matter, they have absorbed its nature: essential fire does not burn, nor do any of the essential entities effect, of themselves alone, the operation which, once they have entered into Matter, is traced to their action.

Matter becomes mistress of what is manifested through it: it corrupts and destroys the incomer, it substitutes its own opposite character and kind, not in the sense of opposing, for example, concrete cold to concrete warmth, but by setting its own formlessness against the Form of heat, shapelessness to shape, excess and defect to the duly ordered. Thus, in sum, what enters into Matter ceases to belong to itself, comes to belong to Matter, just as, in the nourishment of living beings, what is taken in does not remain as it came, but is turned into, say, dog's blood and all that goes to make a dog, becomes, in fact, any of the humours of any recipient.

No, if body is the cause of Evil, then there is no escape; the cause of Evil is Matter.

Still, it will be urged, the incoming Idea should have been able to conquer the Matter.

The difficulty is that Matter's master cannot remain pure itself except by avoidance of Matter.

Besides, the constitution determines both the desires and their violence so that there

are bodies in which the incoming idea cannot hold sway: there is a vicious constitution which chills and clogs the activity and inhibits choice; a contrary bodily habit produces frivolity, lack of balance. The same fact is indicated by our successive variations of mood: in times of stress, we are not the same either in desires or in ideas- as when we are at peace, and we differ again with every several object that brings us satisfaction.

To resume: the Measureless is evil primarily; whatever, either by resemblance or participation, exists in the state of unmeasure, is evil secondarily, by force of its dealing with the Primal- primarily, the darkness; secondarily, the darkened. Now, Vice, being an ignorance and a lack of measure in the Soul, is secondarily evil, not the Essential Evil, just as Virtue is not the Primal Good but is Likeness to The Good, or participation in it.

9. But what approach have we to the knowing of Good and Evil?

And first of the Evil of soul: Virtue, we may know by the Intellectual-Principle and by means of the philosophic habit; but Vice?

A ruler marks off straight from crooked, so Vice is known by its divergence from the line of Virtue.

But are we able to affirm Vice by any vision we can have of it, or is there some other way of knowing it?

Utter viciousness, certainly not by any vision, for it is utterly outside of bound and measure; this thing which is nowhere can be seized only by abstraction; but any degree of evil falling short of The Absolute is knowable by the extent of that falling short.

We see partial wrong; from what is before us we divine that which is lacking to the entire form [or Kind] thus indicated; we see that the completed Kind would be the Indeterminate; by this process we are able to identify and affirm Evil. In the same way when we observe what we feel to be an ugly appearance in Matter- left there because the Reason-Principle has not become so completely the master as to cover over the unseemliness- we recognise Ugliness by the falling-short from Ideal-Form.

But how can we identify what has never had any touch of Form?

We utterly eliminate every kind of Form; and the object in which there is none whatever we call Matter: if we are to see Matter we must so completely abolish Form that we take shapelessness into our very selves.

In fact it is another Intellectual-Principle, not the true, this which ventures a vision so uncongenial.

To see darkness the eye withdraws from the light; it is striving to cease from seeing, therefore it abandons the light which would make the darkness invisible; away from the light its power is rather that of not-seeing than of seeing and this not-seeing is its nearest approach to seeing Darkness. So the Intellectual-Principle, in order to see its

contrary [Matter], must leave its own light locked up within itself, and as it were go forth from itself into an outside realm, it must ignore its native brightness and submit itself to the very contradiction of its being.

10. But if Matter is devoid of quality how can it be evil?

It is described as being devoid of quality in the sense only that it does not essentially possess any of the qualities which it admits and which enter into it as into a substratum. No one says that it has no nature; and if it has any nature at all, why may not that nature be evil though not in the sense of quality?

Quality qualifies something not itself: it is therefore an accidental; it resides in some other object. Matter does not exist in some other object but is the substratum in which the accidental resides. Matter, then, is said to be devoid of Quality in that it does not in itself possess this thing which is by nature an accidental. If, moreover, Quality itself be devoid of Quality, how can Matter, which is the unqualified, be said to have it?

Thus, it is quite correct to say at once that Matter is without Quality and that it is evil: it is Evil not in the sense of having Quality but, precisely, in not having it; give it Quality and in its very Evil it would almost be a Form, whereas in Truth it is a Kind contrary to Form.

“But,” it may be said, “the Kind opposed to all Form is Privation or Negation, and this necessarily refers to something other than itself, it is no Substantial-Existence: therefore if Evil is Privation or Negation it must be lodged in some Negation of Form: there will be no Self-Existent Evil.”

This objection may be answered by applying the principle to the case of Evil in the Soul; the Evil, the Vice, will be a Negation and not anything having a separate existence; we come to the doctrine which denies Matter or, admitting it, denies its Evil; we need not seek elsewhere; we may at once place Evil in the Soul, recognising it as the mere absence of Good. But if the negation is the negation of something that ought to become present, if it is a denial of the Good by the Soul, then the Soul produces vice within itself by the operation of its own Nature, and is devoid of good and, therefore, Soul though it be, devoid of life: the Soul, if it has no life, is soulless; the Soul is no Soul.

No; the Soul has life by its own nature and therefore does not, of its own nature, contain this negation of The Good: it has much good in it; it carries a happy trace of the Intellectual-Principle and is not essentially evil: neither is it primally evil nor is that Primal Evil present in it even as an accidental, for the Soul is not wholly apart from the Good.

Perhaps Vice and Evil as in the Soul should be described not as an entire, but as a partial, negation of good.

But if this were so, part of the Soul must possess The Good, part be without it; the Soul will have a mingled nature and the Evil within it will not be unblended: we have not yet lighted on the Primal, Unmingled Evil. The Soul would possess the Good as its Essence, the Evil as an Accidental.

Perhaps Evil is merely an impediment to the Soul like something affecting the eye and so hindering sight.

But such an evil in the eyes is no more than an occasion of evil, the Absolute Evil is something quite different. If then Vice is an impediment to the Soul, Vice is an occasion of evil but not Evil-Absolute. Virtue is not the Absolute Good, but a co-operator with it; and if Virtue is not the Absolute Good neither is Vice the Absolute Evil. Virtue is not the Absolute Beauty or the Absolute Good; neither, therefore, is Vice the Essential Ugliness or the Essential Evil.

We teach that Virtue is not the Absolute Good and Beauty, because we know that These are earlier than Virtue and transcend it, and that it is good and beautiful by some participation in them. Now as, going upward from virtue, we come to the Beautiful and to the Good, so, going downward from Vice, we reach Essential Evil: from Vice as the starting-point we come to vision of Evil, as far as such vision is possible, and we become evil to the extent of our participation in it. We are become dwellers in the Place of Unlikeness, where, fallen from all our resemblance to the Divine, we lie in gloom and mud: for if the Soul abandons itself unreservedly to the extreme of viciousness, it is no longer a vicious Soul merely, for mere vice is still human, still carries some trace of good: it has taken to itself another nature, the Evil, and as far as Soul can die it is dead. And the death of Soul is twofold: while still sunk in body to lie down in Matter and drench itself with it; when it has left the body, to lie in the other world until, somehow, it stirs again and lifts its sight from the mud: and this is our "going down to Hades and slumbering there."

11. It may be suggested that Vice is feebleness in the Soul.

We shall be reminded that the Vicious Soul is unstable, swept along from every ill to every other, quickly stirred by appetites, headlong to anger, as hasty to compromises, yielding at once to obscure imaginations, as weak, in fact, as the weakest thing made by man or nature, blown about by every breeze, burned away by every heat.

Still the question must be faced what constitutes this weakness in the Soul, whence it comes.

For weakness in the body is not like that in the Soul: the word weakness, which covers the incapacity for work and the lack of resistance in the body, is applied to the Soul merely by analogy- unless, indeed, in the one case as in the other, the cause of the weakness is Matter.

But we must go more thoroughly into the source of this weakness, as we call it, in the Soul, which is certainly not made weak as the result of any density or rarity, or by any thickening or thinning or anything like a disease, like a fever.

Now this weakness must be seated either in Souls utterly disengaged or in Souls bound to Matter or in both.

It cannot exist in those apart from Matter, for all these are pure and, as we read, winged and perfect and unimpeded in their task: there remains only that the weakness be in the fallen Souls, neither cleansed nor clean; and in them the weakness will be, not in any privation but in some hostile presence, like that of phlegm or bile in the organs of the body.

If we form an acute and accurate notion of the cause of the fall we shall understand the weakness that comes by it.

Matter exists; Soul exists; and they occupy, so to speak, one place. There is not one place for Matter and another for Soul-Matter, for instance, kept to earth, Soul in the air: the soul's "separate place" is simply its not being in Matter; that is, its not being united with it; that is that there be no compound unit consisting of Soul and Matter; that is that Soul be not moulded in Matter as in a matrix; this is the Soul's apartness.

But the faculties of the Soul are many, and it has its beginning, its intermediate phases, its final fringe. Matter appears, importunes, raises disorders, seeks to force its way within; but all the ground is holy, nothing there without part in Soul. Matter therefore submits, and takes light: but the source of its illumination it cannot attain to, for the Soul cannot lift up this foreign thing close by, since the evil of it makes it invisible. On the contrary the illumination, the light streaming from the Soul, is dulled, is weakened, as it mixes with Matter which offers Birth to the Soul, providing the means by which it enters into generation, impossible to it if no recipient were at hand.

This is the fall of the Soul, this entry into Matter: thence its weakness: not all the faculties of its being retain free play, for Matter hinders their manifestation; it encroaches upon the Soul's territory and, as it were, crushes the Soul back; and it turns to evil all that it has stolen, until the Soul finds strength to advance again.

Thus the cause, at once, of the weakness of Soul and of all its evil is Matter.

The evil of Matter precedes the weakness, the vice; it is Primal Evil. Even though the Soul itself submits to Matter and engenders to it; if it becomes evil within itself by its commerce with Matter, the cause is still the presence of Matter: the Soul would never have approached Matter but that the presence of Matter is the occasion of its earth-life.

12. If the existence of Matter be denied, the necessity of this Principle must be demonstrated from the treatises "On Matter" where the question is copiously treated.

To deny Evil a place among realities is necessarily to do away with the Good as well, and even to deny the existence of anything desirable; it is to deny desire, avoidance and all intellectual act; for desire has Good for its object, aversion looks to Evil; all intellectual act, all Wisdom, deals with Good and Bad, and is itself one of the things that are good.

There must then be The Good- good unmixed- and the Mingled Good and Bad, and the

Rather Bad than Good, this last ending with the Utterly Bad we have been seeking, just as that in which Evil constitutes the lesser part tends, by that lessening, towards the Good.

What, then, must Evil be to the Soul?

What Soul could contain Evil unless by contact with the lower Kind? There could be no desire, no sorrow, no rage, no fear: fear touches the compounded dreading its dissolution; pain and sorrow are the accompaniments of the dissolution; desires spring from something troubling the grouped being or are a provision against trouble threatened; all impression is the stroke of something unreasonable outside the Soul, accepted only because the Soul is not devoid of parts or phases; the Soul takes up false notions through having gone outside of its own truth by ceasing to be purely itself.

One desire or appetite there is which does not fall under this condemnation; it is the aspiration towards the Intellectual-Principle: this demands only that the Soul dwell alone enshrined within that place of its choice, never lapsing towards the lower.

Evil is not alone: by virtue of the nature of Good, the power of Good, it is not Evil only: it appears, necessarily, bound around with bonds of Beauty, like some captive bound in fetters of gold; and beneath these it is hidden so that, while it must exist, it may not be seen by the gods, and that men need not always have evil before their eyes, but that when it comes before them they may still be not destitute of Images of the Good and Beautiful for their Remembrance.

NINTH TRACTATE.

“THE REASONED DISMISSAL”.

“You will not dismiss your Soul lest it go forth...” [taking something with it].

For wheresoever it go, it will be in some definite condition, and its going forth is to some new place. The Soul will wait for the body to be completely severed from it; then it makes no departure; it simply finds itself free.

But how does the body come to be separated?

The separation takes place when nothing of Soul remains bound up with it: the harmony within the body, by virtue of which the Soul was retained, is broken and it can no longer hold its guest.

But when a man contrives the dissolution of the body, it is he that has used violence and torn himself away, not the body that has let the Soul slip from it. And in loosing the bond he has not been without passion; there has been revolt or grief or anger, movements which it is unlawful to indulge.

But if a man feel himself to be losing his reason?

That is not likely in the Sage, but if it should occur, it must be classed with the inevitable, to be welcome at the bidding of the fact though not for its own sake. To call upon drugs to the release of the Soul seems a strange way of assisting its purposes.

And if there be a period allotted to all by fate, to anticipate the hour could not be a happy act, unless, as we have indicated, under stern necessity.

If everyone is to hold in the other world a standing determined by the state in which he quitted this, there must be no withdrawal as long as there is any hope of progress.

First Tractate

On the Kosmos or on the Heavenly System 1. We hold that the ordered universe, in its material mass, has existed for ever and will for ever endure: but simply to refer this perdurance to the Will of God, however true an explanation, is utterly inadequate.

The elements of this sphere change; the living beings of earth pass away; only the Ideal-form [the species] persists: possibly a similar process obtains in the All.

The Will of God is able to cope with the ceaseless flux and escape of body stuff by

ceaselessly reintroducing the known forms in new substances, thus ensuring perpetuity not to the particular item but to the unity of idea: now, seeing that objects of this realm possess no more than duration of form, why should celestial objects, and the celestial system itself, be distinguished by duration of the particular entity?

Let us suppose this persistence to be the result of the all-inclusiveness of the celestial and universal- with its consequence, the absence of any outlying matter into which change could take place or which could break in and destroy.

This explanation would, no doubt, safeguard the integrity of the Whole, of the All; but our sun and the individual being of the other heavenly bodies would not on these terms be secured in perpetuity: they are parts; no one of them is in itself the whole, the all; it would still be probable that theirs is no more than that duration in form which belongs to fire and such entities.

This would apply even to the entire ordered universe itself. For it is very possible that this too, though not in process of destruction from outside, might have only formal duration; its parts may be so wearing each other down as to keep it in a continuous decay while, amid the ceaseless flux of the Kind constituting its base, an outside power ceaselessly restores the form: in this way the living All may lie under the same conditions as man and horse and the rest man and horse persisting but not the individual of the type.

With this, we would have no longer the distinction of one order, the heavenly system, stable for ever, and another, the earthly, in process of decay: all would be alike except in the point of time; the celestial would merely be longer lasting. If, then, we accepted this duration of type alone as a true account of the All equally with its partial members, our difficulties would be eased- or indeed we should have no further problem- once the Will of God were shown to be capable, under these conditions and by such communication, of sustaining the Universe.

But if we are obliged to allow individual persistence to any definite entity within the Kosmos then, firstly, we must show that the Divine Will is adequate to make it so; secondly, we have to face the question, What accounts for some things having individual persistence and others only the persistence of type? and, thirdly, we ask how the partial entities of the celestial system hold a real duration which would thus appear possible to all partial things.

2. Supposing we accept this view and hold that, while things below the moon's orb have merely type-persistence, the celestial realm and all its several members possess individual eternity; it remains to show how this strict permanence of the individual identity- the actual item eternally unchangeable- can belong to what is certainly corporeal, seeing that bodily substance is characteristically a thing of flux.

The theory of bodily flux is held by Plato no less than by the other philosophers who have dealt with physical matters, and is applied not only to ordinary bodies but to those, also, of the heavenly sphere.

“How,” he asks, “can these corporeal and visible entities continue eternally unchanged in identity?”- evidently agreeing, in this matter also, with Herakleitos who maintained that even the sun is perpetually coming anew into being. To Aristotle there would be no problem; it is only accepting his theories of a fifth-substance.

But to those who reject Aristotle's Quintessence and hold the material mass of the heavens to consist of the elements underlying the living things of this sphere, how is individual permanence possible? And the difficulty is still greater for the parts, for the sun and the heavenly bodies.

Every living thing is a combination of soul and body-kind: the celestial sphere, therefore, if it is to be everlasting as an individual entity must be so in virtue either of both these constituents or of one of them, by the combination of soul and body or by soul only or by body only.

Of course anyone that holds body to be incorruptible secures the desired permanence at once; no need, then, to call on a soul or on any perdurable conjunction to account for the continued maintenance of a living being.

But the case is different when one holds that body is, of itself, perishable and that Soul is the principle of permanence: this view obliges us to the proof that the character of body is not in itself fatal either to the coherence or to the lasting stability which are imperative: it must be shown that the two elements of the union envisaged are not inevitably hostile, but that on the contrary [in the heavens] even Matter must conduce to the scheme of the standing result.

3. We have to ask, that is, how Matter, this entity of ceaseless flux constituting the physical mass of the universe, could serve towards the immortality of the Kosmos.

And our answer is “Because the flux is not outgoing”: where there is motion within but not outwards and the total remains unchanged, there is neither growth nor decline, and thus the Kosmos never ages.

We have a parallel in our earth, constant from eternity to pattern and to mass; the air, too, never fails; and there is always water: all the changes of these elements leave unchanged the Principle of the total living thing, our world. In our own constitution, again, there is a ceaseless shifting of particles- and that with outgoing loss- and yet the individual persists for a long time: where there is no question of an outside region, the body-principle cannot clash with soul as against the identity and endless duration of the living thing.

Of these material elements- for example- fire, the keen and swift, cooperates by its upward tendency as earth by its lingering below; for we must not imagine that the fire, once it finds itself at the point where its ascent must stop, settles down as in its appropriate place, no longer seeking, like all the rest, to expand in both directions. No: but higher is not possible; lower is repugnant to its Kind; all that remains for it is to be

tractable and, answering to a need of its nature, to be drawn by the Soul to the activity of life, and so to move to in a glorious place, in the Soul. Anyone that dreads its falling may take heart; the circuit of the Soul provides against any declination, embracing, sustaining; and since fire has of itself no downward tendency it accepts that guiding without resistance. The partial elements constituting our persons do not suffice for their own cohesion; once they are brought to human shape, they must borrow elsewhere if the organism is to be maintained: but in the upper spheres since there can be no loss by flux no such replenishment is needed.

Suppose such loss, suppose fire extinguished there, then a new fire must be kindled; so also if such loss by flux could occur in some of the superiors from which the celestial fire depends, that too must be replaced: but with such transmutations, while there might be something continuously similar, there would be, no longer, a Living All abidingly self-identical.

4. But matters are involved here which demand specific investigation and cannot be treated as incidental merely to our present problem. We are faced with several questions: Is the heavenly system exposed to any such flux as would occasion the need of some restoration corresponding to nourishment; or do its members, once set in their due places, suffer no loss of substance, permanent by Kind? Does it consist of fire only, or is it mainly of fire with the other elements, as well, taken up and carried in the circuit by the dominant Principle?

Our doctrine of the immortality of the heavenly system rests on the firmest foundation once we have cited the sovereign agent, the soul, and considered, besides, the peculiar excellence of the bodily substance constituting the stars, a material so pure, so entirely the noblest, and chosen by the soul as, in all living beings, the determining principle appropriates to itself the choicest among their characteristic parts. No doubt Aristotle is right in speaking of flame as a turmoil, fire insolently rioting; but the celestial fire is equable, placid, docile to the purposes of the stars.

Still, the great argument remains, the Soul, moving in its marvellous might second only to the very loftiest Existents: how could anything once placed within this Soul break away from it into non-being? No one that understands this principle, the support of all things, can fail to see that, sprung from God, it is a stronger stay than any bonds.

And is it conceivable that the Soul, valid to sustain for a certain space of time, could not so sustain for ever? This would be to assume that it holds things together by violence; that there is a "natural course" at variance with what actually exists in the nature of the universe and in these exquisitely ordered beings; and that there is some power able to storm the established system and destroy its ordered coherence, some kingdom or dominion that may shatter the order founded by the Soul.

Further: The Kosmos has had no beginning- the impossibility has been shown elsewhere- and this is warrant for its continued existence. Why should there be in the future a change that has not yet occurred? The elements there are not worn away like beams and rafters: they hold sound for ever, and so the All holds sound. And even

supposing these elements to be in ceaseless transmutation, yet the All persists: the ground of all the change must itself be changeless.

As to any alteration of purpose in the Soul we have already shown the emptiness of that fancy: the administration of the universe entails neither labour nor loss; and, even supposing the possibility of annihilating all that is material, the Soul would be no whit the better or the worse.

5. But how explain the permanence There, while the content of this sphere- its elements and its living things alike- are passing?

The reason is given by Plato: the celestial order is from God, the living things of earth from the gods sprung from God; and it is law that the offspring of God endures.

In other words, the celestial soul- and our souls with it- springs directly next from the Creator, while the animal life of this earth is produced by an image which goes forth from that celestial soul and may be said to flow downwards from it.

A soul, then, of the minor degree- reproducing, indeed, that of the Divine sphere but lacking in power inasmuch as it must exercise its creative act upon inferior stuff in an inferior region- the substances taken up into the fabric being of themselves repugnant to duration; with such an origin the living things of this realm cannot be of strength to last for ever; the material constituents are not as firmly held and controlled as if they were ruled immediately by a Principle of higher potency.

The heavens, on the contrary, must have persistence as a whole, and this entails the persistence of the parts, of the stars they contain: we could not imagine that whole to endure with the parts in flux- though, of course, we must distinguish things sub-celestial from the heavens themselves whose region does not in fact extend so low as to the moon.

Our own case is different: physically we are formed by that [inferior] soul, given forth [not directly from God but] from the divine beings in the heavens and from the heavens themselves; it is by way of that inferior soul that we are associated with the body [which therefore will not be persistent]; for the higher soul which constitutes the We is the principle not of our existence but of our excellence or, if also of our existence, then only in the sense that, when the body is already constituted, it enters, bringing with it some effluence from the Divine Reason in support of the existence.

6. We may now consider the question whether fire is the sole element existing in that celestial realm and whether there is any outgoing thence with the consequent need of renewal.

Timaeus pronounced the material frame of the All to consist primarily of earth and fire for visibility, earth for solidity- and deduced that the stars must be mainly composed of fire, but not solely since there is no doubt they are solid.

And this is probably a true account. Plato accepts it as indicated by all the appearances. And, in fact, to all our perception- as we see them and derive from them the impression of illumination- the stars appear to be mostly, if not exclusively, fire: but on reasoning into the matter we judge that since solidity cannot exist apart from earth-matter, they must contain earth as well.

But what place could there be for the other elements? It is impossible to imagine water amid so vast a conflagration; and if air were present it would be continually changing into fire.

Admitting [with Timaeus; as a logical truth] that two self-contained entities, standing as extremes to each other need for their coherence two intermediaries; we may still question whether this holds good with regard to physical bodies. Certainly water and earth can be mixed without any such intermediate. It might seem valid to object that the intermediates are already present in the earth and the water; but a possible answer would be, "Yes, but not as agents whose meeting is necessary to the coherence of those extremes."

None the less we will take it that the coherence of extremes is produced by virtue of each possessing all the intermediates. It is still not proven that fire is necessary to the visibility of earth and earth to the solidarity of fire.

On this principle, nothing possesses an essential-nature of its very own; every several thing is a blend, and its name is merely an indication of the dominant constituent.

Thus we are told that earth cannot have concrete existence without the help of some moist element- the moisture in water being the necessary adhesive- but admitting that we so find it, there is still a contradiction in pretending that any one element has a being of its own and in the same breath denying its self-coherence, making its subsistence depend upon others, and so, in reality, reducing the specific element to nothing. How can we talk of the existence of the definite Kind, earth- earth essential- if there exists no single particle of earth which actually is earth without any need of water to secure its self-cohesion? What has such an adhesive to act upon if there is absolutely no given magnitude of real earth to which it may bind particle after particle in its business of producing the continuous mass? If there is any such given magnitude, large or small, of pure earth, then earth can exist in its own nature, independently of water: if there is no such primary particle of pure earth, then there is nothing whatever for the water to bind. As for air- air unchanged, retaining its distinctive quality- how could it conduce to the subsistence of a dense material like earth?

Similarly with fire. No doubt Timaeus speaks of it as necessary not to the existence but to the visibility of earth and the other elements; and certainly light is essential to all visibility- we cannot say that we see darkness, which implies, precisely, that nothing is seen, as silence means nothing being heard.

But all this does not assure us that the earth to be visible must contain fire: light is sufficient: snow, for example, and other extremely cold substances gleam without the

presence of fire- though of course it might be said that fire was once there and communicated colour before disappearing.

As to the composition of water, we must leave it an open question whether there can be such a thing as water without a certain proportion of earth.

But how can air, the yielding element, contain earth?

Fire, again: is earth perhaps necessary there since fire is by its own nature devoid of continuity and not a thing of three dimensions?

Supposing it does not possess the solidity of the three dimensions, it has that of its thrust; now, cannot this belong to it by the mere right and fact of its being one of the corporeal entities in nature? Hardness is another matter, a property confined to earth-stuff. Remember that gold- which is water- becomes dense by the accession not of earth but of denseness or consolidation: in the same way fire, with Soul present within it, may consolidate itself upon the power of the Soul; and there are living beings of fire among the Celestials.

But, in sum, do we abandon the teaching that all the elements enter into the composition of every living thing?

For this sphere, no; but to lift clay into the heavens is against nature, contrary to the laws of her ordaining: it is difficult, too, to think of that swiftest of circuits bearing along earthly bodies in its course nor could such material conduce to the splendour and white glint of the celestial fire.

7. We can scarcely do better, in fine, than follow Plato.

Thus:

In the universe as a whole there must necessarily be such a degree of solidity, that is to say, of resistance, as will ensure that the earth, set in the centre, be a sure footing and support to the living beings moving over it, and inevitably communicate something of its own density to them: the earth will possess coherence by its own unaided quality, but visibility by the presence of fire: it will contain water against the dryness which would prevent the cohesion of its particles; it will hold air to lighten its bulky matters; it will be in contact with the celestial fire- not as being a member of the sidereal system but by the simple fact that the fire there and our earth both belong to the ordered universe so that something of the earth is taken up by the fire as something of the fire by the earth and something of everything by everything else.

This borrowing, however, does not mean that the one thing taking-up from the other enters into a composition, becoming an element in a total of both: it is simply a consequence of the kosmic fellowship; the participant retains its own being and takes over not the thing itself but some property of the thing, not air but air's yielding softness, not fire but fire's incandescence: mixing is another process, a complete surrender with a

resultant compound not, as in this case, earth- remaining earth, the solidity and density we know- with something of fire's qualities superadded.

We have authority for this where we read:

“At the second circuit from the earth, God kindled a light”: he is speaking of the sun which, elsewhere, he calls the all-glowing and, again, the all-gleaming: thus he prevents us imagining it to be anything else but fire, though of a peculiar kind; in other words it is light, which he distinguishes from flame as being only modestly warm: this light is a corporeal substance but from it there shines forth that other “light” which, though it carries the same name, we pronounce incorporeal, given forth from the first as its flower and radiance, the veritable “incandescent body.” Plato's word earthy is commonly taken in too depreciatory a sense: he is thinking of earth as the principle of solidity; we are apt to ignore his distinctions and think of the concrete clay.

Fire of this order, giving forth this purest light, belongs to the upper realm, and there its seat is fixed by nature; but we must not, on that account, suppose the flame of earth to be associated with the beings of that higher sphere.

No: the flame of this world, once it has attained a certain height, is extinguished by the currents of air opposed to it. Moreover, as it carries an earthy element on its upward path, it is weighed downwards and cannot reach those loftier regions. It comes to a stand somewhere below the moon- making the air at that point subtler- and its flame, if any flame can persist, is subdued and softened, and no longer retains its first intensity, but gives out only what radiance it reflects from the light above.

And it is that loftier light- falling variously upon the stars; to each in a certain proportion- that gives them their characteristic differences, as well in magnitude as in colour; just such light constitutes also the still higher heavenly bodies which, however, like clear air, are invisible because of the subtle texture and unresisting transparency of their material substance and also by their very distance.

8. Now: given a light of this degree, remaining in the upper sphere at its appointed station, pure light in purest place, what mode of outflow from it can be conceived possible?

Such a Kind is not so constituted as to flow downwards of its own accord; and there exists in those regions no power to force it down. Again, body in contact with soul must always be very different from body left to itself; the bodily substance of the heavens has that contact and will show that difference.

Besides, the corporeal substance nearest to the heavens would be air or fire: air has no destructive quality; fire would be powerless there since it could not enter into effective contact: in its very rush it would change before its attack could be felt; and, apart from that, it is of the lesser order, no match for what it would be opposing in those higher regions.

Again, fire acts by imparting heat: now it cannot be the source of heat to what is already hot by nature; and anything it is to destroy must as a first condition be heated by it, must be brought to a pitch of heat fatal to the nature concerned.

In sum, then, no outside body is necessary to the heavens to ensure their permanence- or to produce their circular movement, for it has never been shown that their natural path would be the straight line; on the contrary the heavens, by their nature, will either be motionless or move by circle; all other movement indicates outside compulsion. We cannot think, therefore, that the heavenly bodies stand in need of replenishment; we must not argue from earthly frames to those of the celestial system whose sustaining soul is not the same, whose space is not the same, whose conditions are not those which make restoration necessary in this realm of composite bodies always in flux: we must recognise that the changes that take place in bodies here represent a slipping-away from the being [a phenomenon not incident to the celestial sphere] and take place at the dictate of a Principle not dwelling in the higher regions, one not powerful enough to ensure the permanence of the existences in which it is exhibited, one which in its coming into being and in its generative act is but an imitation of an antecedent Kind, and, as we have shown, cannot at every point possess the unchangeable identity of the Intellectual Realm.

SECOND TRACTATE.

THE HEAVENLY CIRCUIT.

1. But whence that circular movement?

In imitation of the Intellectual-Principle.

And does this movement belong to the material part or to the Soul? Can we account for it on the ground that the Soul has itself at once for centre and for the goal to which it must be ceaselessly moving; or that, being self-centred it is not of unlimited extension [and consequently must move ceaselessly to be omnipresent], and that its revolution carries the material mass with it?

If the Soul had been the moving power [by any such semi-physical action] it would be so no longer; it would have accomplished the act of moving and have brought the universe to rest; there would be an end of this endless revolution.

In fact the Soul must be in repose or at least cannot have spatial movement; how then, having itself a movement of quite another order, could it communicate spatial movement?

But perhaps the circular movement [of the Kosmos as soul and body] is not spatial or is spatial not primarily but only incidentally.

What, by this explanation, would be the essential movement of the cosmic soul?

A movement towards itself, the movement of self-awareness, of self-intellection, of the living of its life, the movement of its reaching to all things so that nothing shall lie outside of it, nothing anywhere but within its scope.

The dominant in a living thing is what compasses it entirely and makes it a unity.

If the Soul has no motion of any kind, it would not vitally compass the Kosmos nor would the Kosmos, a thing of body, keep its content alive, for the life of body is movement.

Any spatial motion there is will be limited; it will be not that of Soul untrammelled but that of a material frame ensouled, an animated organism; the movement will be partly of body, partly of Soul, the body tending to the straight line which its nature imposes, the Soul restraining it; the resultant will be the compromise movement of a thing at once carried forward and at rest.

But supposing that the circular movement is to be attributed to the body, how is it to be explained, since all body, including fire [which constitutes the heavens] has straightforward motion?

The answer is that forthright movement is maintained only pending arrival at the place for which the moving thing is destined: where a thing is ordained to be, there it seeks, of its nature, to come for its rest; its motion is its tendence to its appointed place.

Then, since the fire of the sidereal system has attained its goal, why does it not stay at rest?

Evidently because the very nature of fire is to be mobile: if it did not take the curve, its straight line would finally fling it outside the universe: the circular course, then, is imperative.

But this would imply an act of providence?

Not quite: rather its own act under providence; attaining to that realm, it must still take the circular course by its indwelling nature; for it seeks the straight path onwards but finds no further space and is driven back so that it recoils on the only course left to it: there is nothing beyond; it has reached the ultimate; it runs its course in the regions it occupies, itself its own sphere, not destined to come to rest there, existing to move.

Further, the centre of a circle [and therefore of the Kosmos] is distinctively a point of rest: if the circumference outside were not in motion, the universe would be no more than one vast centre. And movement around the centre is all the more to be expected in the case of a living thing whose nature binds it within a body. Such motion alone can constitute its impulse towards its centre: it cannot coincide with the centre, for then there would be no circle; since this may not be, it whirls about it; so only can it indulge its tendence.

If, on the other hand, the Kosmic circuit is due to the Soul, we are not to think of a painful driving [wearing it down at last]; the soul does not use violence or in any way thwart nature, for "Nature" is no other than the custom the All-Soul has established. Omnipresent in its entirety, incapable of division, the Soul of the universe communicates that quality of universal presence to the heavens, too, in their degree, the degree, that is, of pursuing universality and advancing towards it.

If the Soul halted anywhere, there the Kosmos, too, brought so far, would halt: but the Soul encompasses all, and so the Kosmos moves, seeking everything.

Yet never to attain?

On the contrary this very motion is its eternal attainment.

Or, better; the Soul is ceaselessly leading the Kosmos towards itself: the continuous attraction communicates a continuous movement- not to some outside space but towards the Soul and in the one sphere with it, not in the straight line [which would ultimately bring the moving body outside and below the Soul], but in the curving course in which the moving body at every stage possesses the Soul that is attracting it and bestowing itself upon it.

If the soul were stationary, that is if [instead of presiding over a Kosmos] it dwelt wholly and solely in the realm in which every member is at rest, motion would be unknown; but, since the Soul is not fixed in some one station There, the Kosmos must travel to every point in quest of it, and never outside it: in a circle, therefore.

2. And what of lower things? [Why have they not this motion?]

[Their case is very different]: the single thing here is not an all but a part and limited to a given segment of space; that other realm is all, is space, so to speak, and is subject to no hindrance or control, for in itself it is all that is.

And men?

As a self, each is a personal whole, no doubt; but as member of the universe, each is a partial thing.

But if, wherever the circling body be, it possesses the Soul, what need of the circling?

Because everywhere it finds something else besides the Soul [which it desires to possess alone].

The circular movement would be explained, too, if the Soul's power may be taken as resident at its centre.

Here, however, we must distinguish between a centre in reference to the two different natures, body and Soul.

In body, centre is a point of place; in Soul it is a source, the source of some other nature. The word, which without qualification would mean the midpoint of a spheric mass, may serve in the double reference; and, as in a material mass so in the Soul, there must be a centre, that around which the object, Soul or material mass, revolves.

The Soul exists in revolution around God to whom it clings in love, holding itself to the utmost of its power near to Him as the Being on which all depends; and since it cannot coincide with God it circles about Him.

Why then do not all souls [i.e., the lower, also, as those of men and animals] thus circle about the Godhead?

Every Soul does in its own rank and place.

And why not our very bodies, also?

Because the forward path is characteristic of body and because all the body's impulses are to other ends and because what in us is of this circling nature is hampered in its motion by the clay it bears with it, while in the higher realm everything flows on its course, lightly and easily, with nothing to check it, once there is any principle of motion in it at all.

And it may very well be that even in us the Spirit which dwells with the Soul does thus circle about the divinity. For since God is omnipresent the Soul desiring perfect union must take the circular course: God is not stationed.

Similarly Plato attributes to the stars not only the spheric movement belonging to the universe as a whole but also to each a revolution around their common centre; each-not by way of thought but by links of natural necessity- has in its own place taken hold of God and exults.

3. The truth may be resumed in this way:

There is a lowest power of the Soul, a nearest to earth, and this is interwoven throughout the entire universe: another phase possesses sensation, while yet another includes the Reason which is concerned with the objects of sensation: this higher phase holds itself to the spheres, poised towards the Above but hovering over the lesser Soul and giving forth to it an effluence which makes it more intensely vital.

The lower Soul is moved by the higher which, besides encircling and supporting it, actually resides in whatsoever part of it has thrust upwards and attained the spheres. The lower then, ringed round by the higher and answering its call, turns and tends towards it; and this upward tension communicates motion to the material frame in which it is involved: for if a single point in a spheric mass is in any degree moved, without being drawn away from the rest, it moves the whole, and the sphere is set in motion. Something of the same kind happens in the case of our bodies: the unspatial movement

of the Soul- in happiness, for instance, or at the idea of some pleasant event- sets up a spatial movement in the body: the Soul, attaining in its own region some good which increases its sense of life, moves towards what pleases it; and so, by force of the union established in the order of nature, it moves the body, in the body's region, that is in space.

As for that phase of the Soul in which sensation is vested, it, too, takes its good from the Supreme above itself and moves, rejoicingly, in quest of it: and since the object of its desire is everywhere, it too ranges always through the entire scope of the universe.

The Intellectual-Principle has no such progress in any region; its movement is a stationary act, for it turns upon itself.

And this is why the All, circling as it does, is at the same time at rest.

THIRD TRACTATE.

ARE THE STARS CAUSES?

1. That the circuit of the stars indicates definite events to come but without being the cause direct of all that happens, has been elsewhere affirmed, and proved by some modicum of argument: but the subject demands more precise and detailed investigation for to take the one view rather than the other is of no small moment.

The belief is that the planets in their courses actually produce not merely such conditions as poverty, wealth, health and sickness but even ugliness and beauty and, gravest of all, vices and virtue and the very acts that spring from these qualities, the definite doings of each moment of virtue or vice. We are to suppose the stars to be annoyed with men- and upon matters in which men, moulded to what they are by the stars themselves, can surely do them no wrong.

They will be distributing what pass for their good gifts, not out of kindness towards the recipients but as they themselves are affected pleasantly or disagreeably at the various points of their course; so that they must be supposed to change their plans as they stand at their zeniths or are declining.

More absurdly still, some of them are supposed to be malicious and others to be helpful, and yet the evil stars will bestow favours and the benevolent act harshly: further, their action alters as they see each other or not, so that, after all, they possess no definite nature but vary according to their angles of aspect; a star is kindly when it sees one of its fellows but changes at sight of another: and there is even a distinction to be made in the seeing as it occurs in this figure or in that. Lastly, all acting together, the fused influence is different again from that of each single star, just as the blending of distinct fluids gives a mixture unlike any of them.

Since these opinions and others of the same order are prevalent, it will be well to examine them carefully one by one, beginning with the fundamental question:

2. Are these planets to be thought of as soulless or unsouled?

Suppose them, first, to be without Soul.

In that case they can purvey only heat or cold- if cold from the stars can be thought of- that is to say, any communication from them will affect only our bodily nature, since all they have to communicate to us is merely corporeal. This implies that no considerable change can be caused in the bodies affected since emanations merely corporeal cannot differ greatly from star to star, and must, moreover, blend upon earth into one collective resultant: at most the differences would be such as depend upon local position, upon nearness or farness with regard to the centre of influence. This reasoning, of course, is as valid of any cold emanation there may be as of the warm.

Now, what is there in such corporeal action to account for the various classes and kinds of men, learned and illiterate, scholars as against orators, musicians as against people of other professions? Can a power merely physical make rich or poor? Can it bring about such conditions as in no sense depend upon the interaction of corporeal elements? Could it, for example, bring a man such and such a brother, father, son, or wife, give him a stroke of good fortune at a particular moment, or make him generalissimo or king?

Next, suppose the stars to have life and mind and to be effective by deliberate purpose.

In that case, what have they suffered from us that they should, in free will, do us hurt, they who are established in a divine place, themselves divine? There is nothing in their nature of what makes men base, nor can our weal or woe bring them the slightest good or ill.

3. Possibly, however, they act not by choice but under stress of their several positions and collective figures?

But if position and figure determined their action each several one would necessarily cause identical effects with every other on entering any given place or pattern.

And that raises the question what effect for good or bad can be produced upon any one of them by its transit in the parallel of this or that section of the Zodiac circle- for they are not in the Zodiacal figure itself but considerably beneath it especially since, whatever point they touch, they are always in the heavens.

It is absurd to think that the particular grouping under which a star passes can modify either its character or its earthward influences. And can we imagine it altered by its own progression as it rises, stands at centre, declines? Exultant when at centre; dejected or enfeebled in declension; some raging as they rise and growing benignant as they set, while declension brings out the best in one among them; surely this cannot be?

We must not forget that invariably every star, considered in itself, is at centre with

regard to some one given group and in decline with regard to another and vice versa; and, very certainly, it is not at once happy and sad, angry and kindly. There is no reasonable escape in representing some of them as glad in their setting, others in their rising: they would still be grieving and glad at one and the same time.

Further, why should any distress of theirs work harm to us?

No: we cannot think of them as grieving at all or as being cheerful upon occasions: they must be continuously serene, happy in the good they enjoy and the Vision before them. Each lives its own free life; each finds its Good in its own Act; and this Act is not directed towards us.

Like the birds of augury, the living beings of the heavens, having no lot or part with us, may serve incidentally to foreshow the future, but they have absolutely no main function in our regard.

4. It is again not in reason that a particular star should be gladdened by seeing this or that other while, in a second couple, such an aspect is distressing: what enmities can affect such beings? what causes of enmity can there be among them?

And why should there be any difference as a given star sees certain others from the corner of a triangle or in opposition or at the angle of a square?

Why, again, should it see its fellow from some one given position and yet, in the next Zodiacal figure, not see it, though the two are actually nearer?

And, the cardinal question; by what conceivable process could they affect what is attributed to them? How explain either the action of any single star independently or, still more perplexing, the effect of their combined intentions?

We cannot think of them entering into compromises, each renouncing something of its efficiency and their final action in our regard amounting to a concerted plan.

No one star would suppress the contribution of another, nor would star yield to star and shape its conduct under suasion.

As for the fancy that while one is glad when it enters another's region, the second is vexed when in its turn it occupies the place of the first, surely this is like starting with the supposition of two friends and then going on to talk of one being attracted to the other who, however, abhors the first.

5. When they tell us that a certain cold star is more benevolent to us in proportion as it is further away, they clearly make its harmful influence depend upon the coldness of its nature; and yet it ought to be beneficent to us when it is in the opposed Zodiacal figures.

When the cold planet, we are told, is in opposition to the cold, both become menacing: but the natural effect would be a compromise.

And we are asked to believe that one of them is happy by day and grows kindly under the warmth, while another, of a fiery nature, is most cheerful by night- as if it were not always day to them, light to them, and as if the first one could be darkened by night at that great distance above the earth's shadow.

Then there is the notion that the moon, in conjunction with a certain star, is softened at her full but is malignant in the same conjunction when her light has waned; yet, if anything of this order could be admitted, the very opposite would be the case. For when she is full to us she must be dark on the further hemisphere, that is to that star which stands above her; and when dark to us she is full to that other star, upon which only then, on the contrary, does she look with her light. To the moon itself, in fact, it can make no difference in what aspect she stands, for she is always lit on the upper or on the under half: to the other star, the warmth from the moon, of which they speak, might make a difference; but that warmth would reach it precisely when the moon is without light to us; at its darkest to us it is full to that other, and therefore beneficent. The darkness of the moon to us is of moment to the earth, but brings no trouble to the planet above. That planet, it is alleged, can give no help on account of its remoteness and therefore seems less well disposed; but the moon at its full suffices to the lower realm so that the distance of the other is of no importance. When the moon, though dark to us, is in aspect with the Fiery Star she is held to be favourable: the reason alleged is that the force of Mars is all-sufficient since it contains more fire than it needs.

The truth is that while the material emanations from the living beings of the heavenly system are of various degrees of warmth- planet differing from planet in this respect- no cold comes from them: the nature of the space in which they have their being is voucher for that.

The star known as Jupiter includes a due measure of fire [and warmth], in this resembling the Morning-star and therefore seeming to be in alliance with it. In aspect with what is known as the Fiery Star, Jupiter is beneficent by virtue of the mixing of influences: in aspect with Saturn unfriendly by dint of distance. Mercury, it would seem, is indifferent whatever stars it be in aspect with; for it adopts any and every character.

But all the stars are serviceable to the Universe, and therefore can stand to each other only as the service of the Universe demands, in a harmony like that observed in the members of any one animal form. They exist essentially for the purpose of the Universe, just as the gall exists for the purposes of the body as a whole not less than for its own immediate function: it is to be the inciter of the animal spirits but without allowing the entire organism and its own especial region to run riot. Some such balance of function was indispensable in the All- bitter with sweet. There must be differentiation- eyes and so forth- but all the members will be in sympathy with the entire animal frame to which they belong. Only so can there be a unity and a total harmony.

And in such a total, analogy will make every part a Sign.

6. But that this same Mars, or Aphrodite, in certain aspects should cause adulteries- as

if they could thus, through the agency of human incontinence, satisfy their own mutual desires- is not such a notion the height of unreason? And who could accept the fancy that their happiness comes from their seeing each other in this or that relative position and not from their own settled nature?

Again: countless myriads of living beings are born and continue to be: to minister continuously to every separate one of these; to make them famous, rich, poor, lascivious; to shape the active tendencies of every single one- what kind of life is this for the stars, how could they possibly handle a task so huge?

They are to watch, we must suppose, the rising of each several constellation and upon that signal to act; such a one, they see, has risen by so many degrees, representing so many of the periods of its upward path; they reckon on their fingers at what moment they must take the action which, executed prematurely, would be out of order: and in the sum, there is no One Being controlling the entire scheme; all is made over to the stars singly, as if there were no Sovereign Unity, standing as source of all the forms of Being in subordinate association with it, and delegating to the separate members, in their appropriate Kinds, the task of accomplishing its purposes and bringing its latent potentiality into act.

This is a separatist theory, tenable only by minds ignorant of the nature of a Universe which has a ruling principle and a first cause operative downwards through every member.

7. But, if the stars announce the future- as we hold of many other things also- what explanation of the cause have we to offer? What explains the purposeful arrangement thus implied? Obviously, unless the particular is included under some general principle of order, there can be no signification.

We may think of the stars as letters perpetually being inscribed on the heavens or inscribed once for all and yet moving as they pursue the other tasks allotted to them: upon these main tasks will follow the quality of signifying, just as the one principle underlying any living unit enables us to reason from member to member, so that for example we may judge of character and even of perils and safeguards by indications in the eyes or in some other part of the body. If these parts of us are members of a whole, so are we: in different ways the one law applies.

All teems with symbol; the wise man is the man who in any one thing can read another, a process familiar to all of us in not a few examples of everyday experience.

But what is the comprehensive principle of co-ordination? Establish this and we have a reasonable basis for the divination, not only by stars but also by birds and other animals, from which we derive guidance in our varied concerns.

All things must be enchained; and the sympathy and correspondence obtaining in any one closely knit organism must exist, first, and most intensely, in the All. There must be one principle constituting this unit of many forms of life and enclosing the several

members within the unity, while at the same time, precisely as in each thing of detail the parts too have each a definite function, so in the All each several member must have its own task- but more markedly so since in this case the parts are not merely members but themselves Alls, members of the loftier Kind.

Thus each entity takes its origin from one Principle and, therefore, while executing its own function, works in with every other member of that All from which its distinct task has by no means cut it off: each performs its act, each receives something from the others, every one at its own moment bringing its touch of sweet or bitter. And there is nothing undesigned, nothing of chance, in all the process: all is one scheme of differentiation, starting from the Firsts and working itself out in a continuous progression of Kinds.

8. Soul, then, in the same way, is intent upon a task of its own; alike in its direct course and in its divagation it is the cause of all by its possession of the Thought of the First Principle: thus a Law of Justice goes with all that exists in the Universe which, otherwise, would be dissolved, and is perdurable because the entire fabric is guided as much by the orderliness as by the power of the controlling force. And in this order the stars, as being no minor members of the heavenly system, are co-operators contributing at once to its stately beauty and to its symbolic quality. Their symbolic power extends to the entire realm of sense, their efficacy only to what they patently do.

For our part, nature keeps us upon the work of the Soul as long as we are not wrecked in the multiplicity of the Universe: once thus sunk and held we pay the penalty, which consists both in the fall itself and in the lower rank thus entailed upon us: riches and poverty are caused by the combinations of external fact.

And what of virtue and vice?

That question has been amply discussed elsewhere: in a word, virtue is ours by the ancient staple of the Soul; vice is due to the commerce of a Soul with the outer world.

9. This brings us to the Spindle-destiny, spun according to the ancients by the Fates. To Plato the Spindle represents the co-operation of the moving and the stable elements of the kosmic circuit: the Fates with Necessity, Mother of the Fates, manipulate it and spin at the birth of every being, so that all comes into existence through Necessity.

In the Timaeus, the creating God bestows the essential of the Soul, but it is the divinities moving in the kosmos [the stars] that infuse the powerful affections holding from Necessity our impulse and our desire, our sense of pleasure and of pain- and that lower phase of the Soul in which such experiences originate. By this statement our personality is bound up with the stars, whence our Soul [as total of Principle and affections] takes shape; and we are set under necessity at our very entrance into the world: our temperament will be of the stars' ordering, and so, therefore, the actions which derive from temperament, and all the experiences of a nature shaped to impressions.

What, after all this, remains to stand for the "We"?

The "We" is the actual resultant of a Being whose nature includes, with certain sensibilities, the power of governing them. Cut off as we are by the nature of the body, God has yet given us, in the midst of all this evil, virtue the unconquerable, meaningless in a state of tranquil safety but everything where its absence would be peril of fall.

Our task, then, is to work for our liberation from this sphere, severing ourselves from all that has gathered about us; the total man is to be something better than a body ensouled- the bodily element dominant with a trace of Soul running through it and a resultant life-course mainly of the body- for in such a combination all is, in fact, bodily. There is another life, emancipated, whose quality is progression towards the higher realm, towards the good and divine, towards that Principle which no one possesses except by deliberate usage but so may appropriate, becoming, each personally, the higher, the beautiful, the Godlike, and living, remote, in and by It- unless one choose to go bereaved of that higher Soul and therefore, to live fate-bound, no longer profiting, merely, by the significance of the sidereal system but becoming as it were a part sunken in it and dragged along with the whole thus adopted.

For every human Being is of twofold character; there is that compromise-total and there is the Authentic Man: and it is so with the Kosmos as a whole; it is in the one phase a conjunction of body with a certain form of the Soul bound up in body; in the other phase it is the Universal Soul, that which is not itself embodied but flashes down its rays into the embodied Soul: and the same twofold quality belongs to the Sun and the other members of the heavenly system.

To the remoter Soul, the pure, sun and stars communicate no baseness. In their efficacy upon the [material] All, they act as parts of it, as ensouled bodies within it; and they act only upon what is partial; body is the agent while, at the same time, it becomes the vehicle through which is transmitted something of the star's will and of that authentic Soul in it which is steadfastly in contemplation of the Highest.

But [with every allowance to the lower forces] all follows either upon that Highest or rather upon the Beings about It- we may think of the Divine as a fire whose outgoing warmth pervades the Universe- or upon whatsoever is transmitted by the one Soul [the divine first Soul] to the other, its Kin [the Soul of any particular being]. All that is graceless is admixture. For the Universe is in truth a thing of blend, and if we separate from it that separable Soul, the residue is little. The All is a God when the divine Soul is counted in with it; "the rest," we read, "is a mighty spirit and its ways are subdivine."

10. If all this be true, we must at once admit signification, though, neither singly nor collectively, can we ascribe to the stars any efficacy except in what concerns the [material] All and in what is of their own function.

We must admit that the Soul before entering into birth presents itself bearing with it something of its own, for it could never touch body except under stress of a powerful inner impulse; we must admit some element of chance around it from its very entry, since the moment and conditions are determined by the kosmic circuit: and we must

admit some effective power in that circuit itself; it is co-operative, and completes of its own act the task that belongs to the All of which everything in the circuit takes the rank and function of a part.

11. And we must remember that what comes from the supernals does not enter into the recipients as it left the source; fire, for instance, will be duller; the loving instinct will degenerate and issue in ugly forms of the passion; the vital energy in a subject not so balanced as to display the mean of manly courage, will come out as either ferocity or faint-heartedness; and ambition... in love...; and the instinct towards good sets up the pursuit of semblant beauty; intellectual power at its lowest produces the extreme of wickedness, for wickedness is a miscalculating effort towards Intelligence.

Any such quality, modified at best from its supreme form, deteriorates again within itself: things of any kind that approach from above, altered by merely leaving their source change further still by their blending with bodies, with Matter, with each other.

12. All that thus proceeds from the supernal combines into a unity and every existing entity takes something from this blended infusion so that the result is the thing itself plus some quality. The effluence does not make the horse but adds something to it; for horse comes by horse, and man by man: the sun plays its part no doubt in the shaping, but the man has his origin in the Human-Principle. Outer things have their effect, sometimes to hurt and sometimes to help; like a father, they often contribute to good but sometimes also to harm; but they do not wrench the human being from the foundations of its nature; though sometimes Matter is the dominant, and the human principle takes the second place so that there is a failure to achieve perfection; the Ideal has been attenuated.

13. Of phenomena of this sphere some derive from the Kosmic Circuit and some not: we must take them singly and mark them off, assigning to each its origin.

The gist of the whole matter lies in the consideration that Soul governs this All by the plan contained in the Reason-Principle and plays in the All exactly the part of the particular principle which in every living-thing forms the members of the organism and adjusts them to the unity of which they are portions; the entire force of the Soul is represented in the All, but, in the parts, Soul is present only in proportion to the degree of essential reality held by each of such partial objects. Surrounding every separate entity there are other entities, whose approach will sometimes be hostile and sometimes helpful to the purpose of its nature; but to the All taken in its length and breadth each and every separate existent is an adjusted part, holding its own characteristic and yet contributing by its own native tendency to the entire life-history of the Universe.

The soulless parts of the All are merely instruments; all their action is effected, so to speak, under a compulsion from outside themselves.

The ensouled fall into two classes. The one kind has a motion of its own, but haphazard like that of horses between the shafts but before their driver sets the course; they are set right by the whip. In the Living-Being possessed of Reason, the nature-principle

includes the driver; where the driver is intelligent, it takes in the main a straight path to a set end. But both classes are members of the All and co-operate towards the general purpose.

The greater and most valuable among them have an important operation over a wide range: their contribution towards the life of the whole consists in acting, not in being acted upon; others, but feebly equipped for action, are almost wholly passive; there is an intermediate order whose members contain within themselves a principle of productivity and activity and make themselves very effective in many spheres or ways and yet serve also by their passivity.

Thus the All stands as one all-complete Life, whose members, to the measure in which each contains within itself the Highest, effect all that is high and noble: and the entire scheme must be subordinate to its Dirigeant as an army to its general, "following upon Zeus"- it has been said- "as he proceeds towards the Intelligible Kind."

Secondary in the All are those of its parts which possess a less exalted nature just as in us the members rank lower than the Soul; and so all through, there is a general analogy between the things of the All and our own members- none of quite equal rank.

All living things, then- all in the heavens and all elsewhere- fall under the general Reason-Principle of the All- they have been made parts with a view to the whole: not one of these parts, however exalted, has power to effect any alteration of these Reason-Principles or of things shaped by them and to them; some modification one part may work upon another, whether for better or for worse; but there is no power that can wrest anything outside of its distinct nature.

The part effecting such a modification for the worse may act in several ways.

It may set up some weakness restricted to the material frame. Or it may carry the weakness through to the sympathetic Soul which by the medium of the material frame, become a power to debasement, has been delivered over, though never in its essence, to the inferior order of being. Or, in the case of a material frame ill-organized, it may check all such action [of the Soul] upon the material frame as demands a certain collaboration in the part acted upon: thus a lyre may be so ill-strung as to be incapable of the melodic exactitude necessary to musical effect.

14. What of poverty and riches, glory and power?

In the case of inherited fortune, the stars merely announce a rich man, exactly as they announce the high social standing of the child born to a distinguished house.

Wealth may be due to personal activity: in this case if the body has contributed, part of the effect is due to whatever has contributed towards the physical powers, first the parents and then, if place has had its influence, sky and earth; if the body has borne no part of the burden, then the success, and all the splendid accompaniments added by the Recompensers, must be attributed to virtue exclusively. If fortune has come by gift

from the good, then the source of the wealth is, again, virtue: if by gift from the evil, but to a meritorious recipient, then the credit must be given to the action of the best in them: if the recipient is himself unprincipled, the wealth must be attributed primarily to the very wickedness and to whatsoever is responsible for the wickedness, while the givers bear an equal share in the wrong.

When the success is due to labour, tillage for example, it must be put down to the tiller, with all his environment as contributory. In the case of treasure-trove, something from the All has entered into action; and if this be so, it will be foreshown- since all things make a chain, so that we can speak of things universally. Money is lost: if by robbery, the blame lies with the robber and the native principle guiding him: if by shipwreck, the cause is the chain of events. As for good fame, it is either deserved and then is due to the services done and to the merit of those appraising them, or it is undeserved, and then must be attributed to the injustice of those making the award. And the same principle holds in regards power- for this also may be rightly or unrightly placed- it depends either upon the merit of the dispensers of place or upon the man himself who has effected his purpose by the organization of supporters or in many other possible ways. Marriages, similarly, are brought about either by choice or by chance interplay of circumstance. And births are determined by marriages: the child is moulded true to type when all goes well; otherwise it is marred by some inner detriment, something due to the mother personally or to an environment unfavourable to that particular conception.

15. According to Plato, lots and choice play a part [in the determination of human conditions] before the Spindle of Necessity is turned; that once done, only the Spindle-destiny is valid; it fixes the chosen conditions irretrievably since the elected guardian-spirit becomes accessory to their accomplishment.

But what is the significance of the Lots?

By the Lots we are to understand birth into the conditions actually existent in the All at the particular moment of each entry into body, birth into such and such a physical frame, from such and such parents, in this or that place, and generally all that in our phraseology is the External.

For Particulars and Universals alike it is established that to the first of those known as the Fates, to Clotho the Spinner, must be due the unity and as it were interweaving of all that exists: Lachesis presides over the Lots: to Atropos must necessarily belong the conduct of mundane events.

Of men, some enter into life as fragments of the All, bound to that which is external to themselves: they are victims of a sort of fascination, and are hardly, or not at all, themselves: but others mastering all this- straining, so to speak, by the head towards the Higher, to what is outside even the Soul- preserve still the nobility and the ancient privilege of the Soul's essential being.

For certainly we cannot think of the Soul as a thing whose nature is just a sum of impressions from outside- as if it, alone, of all that exists, had no native character.

No: much more than all else, the Soul, possessing the Idea which belongs to a Principle, must have as its native wealth many powers serving to the activities of its Kind. It is an Essential-Existent and with this Existence must go desire and act and the tendency towards some good.

While body and soul stand one combined thing, there is a joint nature, a definite entity having definite functions and employments; but as soon as any Soul is detached, its employments are kept apart, its very own: it ceases to take the body's concerns to itself: it has vision now: body and soul stand widely apart.

16. The question arises what phase of the Soul enters into the union for the period of embodiment and what phase remains distinct, what is separable and what necessarily interlinked, and in general what the Living-Being is.

On all this there has been a conflict of teaching: the matter must be examined later on from quite other considerations than occupy us here. For the present let us explain in what sense we have described the All as the expressed idea of the Governing Soul.

One theory might be that the Soul creates the particular entities in succession- man followed by horse and other animals domestic or wild: fire and earth, though, first of all- that it watches these creations acting upon each other whether to help or to harm, observes, and no more, the tangled web formed of all these strands, and their unfailing sequences; and that it makes no concern of the result beyond securing the reproduction of the primal living-beings, leaving them for the rest to act upon each other according to their definite natures.

Another view makes the soul answerable for all that thus comes about, since its first creations have set up the entire enchainment.

No doubt the Reason-Principle [conveyed by the Soul] covers all the action and experience of this realm: nothing happens, even here, by any form of haphazard; all follows a necessary order.

Is everything, then, to be attributed to the act of the Reason-Principles?

To their existence, no doubt, but not to their effective action; they exist and they know; or better, the Soul, which contains the engendering Reason-Principle, knows the results of all it has brought to pass. For whensoever similar factors meet and act in relation to each other, similar consequences must inevitably ensue: the Soul adopting or foreplanning the given conditions accomplishes the due outcome and links all into a total.

All, then, is antecedent and resultant, each sequent becoming in turn an antecedent once it has taken its place among things. And perhaps this is a cause of progressive deterioration: men, for instance, are not as they were of old; by dint of interval and of the inevitable law, the Reason-Principles have ceded something to the characteristics of the

Matter.

But:

The Soul watches the ceaselessly changing universe and follows all the fate of all its works: this is its life, and it knows no respite from this care, but is ever labouring to bring about perfection, planning to lead all to an unending state of excellence- like a farmer, first sowing and planting and then constantly setting to rights where rainstorms and long frosts and high gales have played havoc.

If such a conception of Soul be rejected as untenable, we are obliged to think that the Reason-Principles themselves foreknew or even contained the ruin and all the consequences of flaw.

But then we would be imputing the creation of evil to the Reason-Principles, though the arts and their guiding principle do not include blundering, do not cover the inartistic, the destruction of the work of art.

And here it will be objected that in All there is nothing contrary to nature, nothing evil.

Still, by the side of the better there exists also what is less good.

Well, perhaps even the less good has its contributory value in the All. Perhaps there is no need that everything be good. Contraries may co-operate; and without opposites there could be no ordered Universe: all living beings of the partial realm include contraries. The better elements are compelled into existence and moulded to their function by the Reason-Principle directly; the less good are potentially present in the Reason-Principles, actually present in the phenomena themselves; the Soul's power had reached its limit, and failed to bring the Reason-Principles into complete actuality since, amid the clash of these antecedent Principles, Matter had already from its own stock produced the less good.

Yet, with all this, Matter is continuously overruled towards the better; so that out of the total of things- modified by Soul on the one hand and by Matter on the other hand, and on neither hand as sound as in the Reason-Principles- there is, in the end, a Unity.

17. But these Reason-Principles, contained in the Soul, are they Thoughts?

And if so, by what process does the Soul create in accordance with these Thoughts?

It is upon Matter that this act of the Reason is exercised; and what acts physically is not an intellectual operation or a vision, but a power modifying matter, not conscious of it but merely acting upon it: the Reason-Principle, in other words, acts much like a force producing a figure or pattern upon water- that of a circle, suppose, where the formation of the ring is conditioned by something distinct from that force itself.

If this is so, the prior puissance of the Soul [that which conveys the Reason-Principles]

must act by manipulating the other Soul, that which is united with Matter and has the generative function.

But is this handling the result of calculation?

Calculation implies reference. Reference, then, to something outside or to something contained within itself? If to its own content, there is no need of reasoning, which could not itself perform the act of creation; creation is the operation of that phase of the Soul which contains Ideal-Principles; for that is its stronger puissance, its creative part.

It creates, then, on the model of the Ideas; for, what it has received from the Intellectual-Principle it must pass on in turn.

In sum, then, the Intellectual-Principle gives from itself to the Soul of the All which follows immediately upon it: this again gives forth from itself to its next, illuminated and imprinted by it; and that secondary Soul at once begins to create, as under order, unhindered in some of its creations, striving in others against the repugnance of Matter.

It has a creative power, derived; it is stored with Reason-Principles not the very originals: therefore it creates, but not in full accordance with the Principles from which it has been endowed: something enters from itself; and, plainly, this is inferior. The issue then is something living, yes; but imperfect, hindering its own life, something very poor and reluctant and crude, formed in a Matter that is the fallen sediment of the Higher Order, bitter and embittering. This is the Soul's contribution to the All.

18. Are the evils in the Universe necessary because it is of later origin than the Higher Sphere?

Perhaps rather because without evil the All would be incomplete. For most or even all forms of evil serve the Universe- much as the poisonous snake has its use- though in most cases their function is unknown. Vice itself has many useful sides: it brings about much that is beautiful, in artistic creations for example, and it stirs us to thoughtful living, not allowing us to drowse in security.

If all this is so, then [the secret of creation is that] the Soul of the All abides in contemplation of the Highest and Best, ceaselessly striving towards the Intelligible Kind and towards God: but, thus absorbing and filled full, it overflows- so to speak- and the image it gives forth, its last utterance towards the lower, will be the creative puissance.

This ultimate phase, then, is the Maker, secondary to that aspect of the Soul which is primarily saturated from the Divine Intelligence. But the Creator above all is the Intellectual-Principle, as giver, to the Soul that follows it, of those gifts whose traces exist in the Third Kind.

Rightly, therefore, is this Kosmos described as an image continuously being imaged, the First and the Second Principles immobile, the Third, too, immobile essentially, but, accidentally and in Matter, having motion.

For as long as divine Mind and Soul exist, the divine Thought-Forms will pour forth into that phase of the Soul: as long as there is a sun, all that streams from it will be some form of Light.

FOURTH TRACTATE.

MATTER IN ITS TWO KINDS.

1. By common agreement of all that have arrived at the conception of such a Kind, what is known as Matter is understood to be a certain base, a recipient of Form-Ideas. Thus far all go the same way. But departure begins with the attempt to establish what this basic Kind is in itself, and how it is a recipient and of what.

To a certain school, body-forms exclusively are the Real Beings; existence is limited to bodies; there is one only Matter, the stuff underlying the primal-constituents of the Universe: existence is nothing but this Matter: everything is some modification of this; the elements of the Universe are simply this Matter in a certain condition.

The school has even the audacity to foist Matter upon the divine beings so that, finally, God himself becomes a mode of Matter- and this though they make it corporeal, describing it as a body void of quality, but a magnitude.

Another school makes it incorporeal: among these, not all hold the theory of one only Matter; some of them while they maintain the one Matter, in which the first school believes, the foundation of bodily forms, admit another, a prior, existing in the divine-sphere, the base of the Ideas there and of the unembodied Beings.

2. We are obliged, therefore, at the start, both to establish the existence of this other Kind and to examine its nature and the mode of its Being.

Now if Matter must characteristically be undetermined, void of shape, while in that sphere of the Highest there can be nothing that lacks determination, nothing shapeless, there can be no Matter there. Further, if all that order is simplex, there can be no need of Matter, whose function is to join with some other element to form a compound: it will be found of necessity in things of derived existence and shifting nature- the signs which lead us to the notion of Matter- but it is unnecessary to the primal.

And again, where could it have come from? whence did it take its being? If it is derived, it has a source: if it is eternal, then the Primal-Principles are more numerous than we thought, the Firsts are a meeting-ground. Lastly, if that Matter has been entered by Idea, the union constitutes a body; and, so, there is Body in the Supreme.

3. Now it may be observed, first of all, that we cannot hold utterly cheap either the indeterminate, or even a Kind whose very idea implies absence of form, provided only that it offer itself to its Priors and [through them] to the Highest Beings. We have the parallel of the Soul itself in its relation to the Intellectual-Principle and the Divine

Reason, taking shape by these and led so to a nobler principle of form.

Further, a compound in the Intellectual order is not to be confounded with a compound in the realm of Matter; the Divine Reasons are compounds and their Act is to produce a compound, namely that [lower] Nature which works towards Idea. And there is not only a difference of function; there is a still more notable difference of source. Then, too, the Matter of the realm of process ceaselessly changes its form: in the eternal, Matter is immutably one and the same, so that the two are diametrically opposites. The Matter of this realm is all things in turn, a new entity in every separate case, so that nothing is permanent and one thing ceaselessly pushes another out of being: Matter has no identity here. In the Intellectual it is all things at once: and therefore has nothing to change into: it already and ever contains all. This means that not even in its own Sphere is the Matter there at any moment shapeless: no doubt that is true of the Matter here as well; but shape is held by a very different right in the two orders of Matter.

As to whether Matter is eternal or a thing of process, this will be clear when we are sure of its precise nature.

4. The present existence of the Ideal-Forms has been demonstrated elsewhere: we take up our argument from that point.

If, then, there is more than one of such forming Ideas, there must of necessity be some character common to all and equally some peculiar character in each keeping them distinct.

This peculiar characteristic, this distinguishing difference, is the individual shape. But if shape, then there is the shaped, that in which the difference is lodged.

There is, therefore, a Matter accepting the shape, a permanent substratum.

Further, admitting that there is an Intelligible Realm beyond, of which this world is an image, then, since this world-compound is based on Matter, there must be Matter there also.

And how can you predicate an ordered system without thinking of form, and how think of form apart from the notion of something in which the form is lodged?

No doubt that Realm is, in the strict fact, utterly without parts, but in some sense there is part there too. And in so far as these parts are really separate from each other, any such division and difference can be no other than a condition of Matter, of a something divided and differentiated: in so far as that realm, though without parts, yet consists of a variety of entities, these diverse entities, residing in a unity of which they are variations, reside in a Matter; for this unity, since it is also a diversity, must be conceived of as varied and multiform; it must have been shapeless before it took the form in which variation occurs. For if we abstract from the Intellectual-Principle the variety and the particular shapes, the Reason-Principles and the Thoughts, what precedes these was something shapeless and undetermined, nothing of what is actually present there.

5. It may be objected that the Intellectual-Principle possesses its content in an eternal conjunction so that the two make a perfect unity, and that thus there is no Matter there.

But that argument would equally cancel the Matter present in the bodily forms of this realm: body without shape has never existed, always body achieved and yet always the two constituents. We discover these two- Matter and Idea- by sheer force of our reasoning which distinguishes continually in pursuit of the simplex, the irreducible, working on, until it can go no further, towards the ultimate in the subject of enquiry. And the ultimate of every partial-thing is its Matter, which, therefore, must be all darkness since light is a Reason-Principle. The Mind, too, as also a Reason-Principle, sees only in each particular object the Reason-Principle lodging there; anything lying below that it declares to lie below the light, to be therefore a thing of darkness, just as the eye, a thing of light, seeks light and colours which are modes of light, and dismisses all that is below the colours and hidden by them, as belonging to the order of the darkness, which is the order of Matter.

The dark element in the Intelligible, however, differs from that in the sense-world: so therefore does the Matter- as much as the forming-Idea presiding in each of the two realms. The Divine Matter, though it is the object of determination has, of its own nature, a life defined and intellectual; the Matter of this sphere while it does accept determination is not living or intellective, but a dead thing decorated: any shape it takes is an image, exactly as the Base is an image. There on the contrary the shape is a real-existent as is the Base. Those that ascribe Real Being to Matter must be admitted to be right as long as they keep to the Matter of the Intelligible Realm: for the Base there is Being, or even, taken as an entirety with the higher that accompanies it, is illuminated Being.

But does this Base, of the Intellectual Realm, possess eternal existence?

The solution of that question is the same as for the Ideas.

Both are engendered, in the sense that they have had a beginning, but unengendered in that this beginning is not in Time: they have a derived being but by an eternal derivation: they are not, like the Kosmos, always in process but, in the character of the Supernal, have their Being permanently. For that differentiation within the Intelligible which produces Matter has always existed and it is this cleavage which produces the Matter there: it is the first movement; and movement and differentiation are convertible terms since the two things arose as one: this motion, this cleavage, away from the first is indetermination [= Matter], needing The First to its determination which it achieves by its Return, remaining, until then, an Alienism, still lacking good; unlit by the Supernal. It is from the Divine that all light comes, and, until this be absorbed, no light in any recipient of light can be authentic; any light from elsewhere is of another order than the true.

6. We are led thus to the question of receptivity in things of body.

An additional proof that bodies must have some substratum different from themselves is found in the changing of the basic-constituents into one another. Notice that the destruction of the elements passing over is not complete- if it were we would have a Principle of Being wrecked in Non-being- nor does an engendered thing pass from utter non-being into Being: what happens is that a new form takes the place of an old. There is, then, a stable element, that which puts off one form to receive the form of the incoming entity.

The same fact is clearly established by decay, a process implying a compound object; where there is decay there is a distinction between Matter and Form.

And the reasoning which shows the destructible to be a compound is borne out by practical examples of reduction: a drinking vessel is reduced to its gold, the gold to liquid; analogy forces us to believe that the liquid too is reducible.

The basic-constituents of things must be either their Form-Idea or that Primal Matter [of the Intelligible] or a compound of the Form and Matter.

Form-Idea, pure and simple, they cannot be: for without Matter how could things stand in their mass and magnitude?

Neither can they be that Primal Matter, for they are not indestructible.

They must, therefore, consist of Matter and Form-Idea- Form for quality and shape, Matter for the base, indeterminate as being other than Idea.

7. Empedokles in identifying his “elements” with Matter is refuted by their decay.

Anaxagoras, in identifying his “primal-combination” with Matter- to which he allots no mere aptness to any and every nature or quality but the effective possession of all- withdraws in this way the very Intellectual-Principle he had introduced; for this Mind is not to him the bestower of shape, of Forming Idea; and it is co-aeval with Matter, not its prior. But this simultaneous existence is impossible: for if the combination derives Being by participation, Being is the prior; if both are Authentic Existents, then an additional Principle, a third, is imperative [a ground of unification]. And if this Creator, Mind, must pre-exist, why need Matter contain the Forming-Ideas parcel-wise for the Mind, with unending labour, to assort and allot? Surely the undetermined could be brought to quality and pattern in the one comprehensive act?

As for the notion that all is in all, this clearly is impossible.

Those who make the base to be “the infinite” must define the term.

If this “infinite” means “of endless extension” there is no infinite among beings; there is neither an infinity-in-itself [Infinity Abstract] nor an infinity as an attribute to some body; for in the first case every part of that infinity would be infinite and in the second an object in which the infinity was present as an attribute could not be infinite apart from

that attribute, could not be simplex, could not therefore be Matter.

Atoms again cannot meet the need of a base.

There are no atoms; all body is divisible endlessly: besides neither the continuity nor the ductility of corporeal things is explicable apart from Mind, or apart from the Soul which cannot be made up of atoms; and, again, out of atoms creation could produce nothing but atoms: a creative power could produce nothing from a material devoid of continuity. Any number of reasons might be brought, and have been brought, against this hypothesis and it need detain us no longer.

8. What, then, is this Kind, this Matter, described as one stuff, continuous and without quality?

Clearly since it is without quality it is incorporeal; bodiliness would be quality.

It must be the basic stuff of all the entities of the sense-world and not merely base to some while being to others achieved form.

Clay, for example, is matter to the potter but is not Matter pure and simple. Nothing of this sort is our object: we are seeking the stuff which underlies all alike. We must therefore refuse to it all that we find in things of sense- not merely such attributes as colour, heat or cold, but weight or weightlessness, thickness or thinness, shape and therefore magnitude; though notice that to be present within magnitude and shape is very different from possessing these qualities.

It cannot be a compound, it must be a simplex, one distinct thing in its nature; only so can it be void of all quality. The Principle which gives it form gives this as something alien: so with magnitude and all really-existent things bestowed upon it. If, for example, it possessed a magnitude of its own, the Principle giving it form would be at the mercy of that magnitude and must produce not at will, but only within the limit of the Matter's capacity: to imagine that Will keeping step with its material is fantastic.

The Matter must be of later origin than the forming-power, and therefore must be at its disposition throughout, ready to become anything, ready therefore to any bulk; besides, if it possessed magnitude, it would necessarily possess shape also: it would be doubly inductile.

No: all that ever appears upon it is brought in by the Idea: the Idea alone possesses: to it belongs the magnitude and all else that goes with the Reason-Principle or follows upon it. Quantity is given with the Ideal-Form in all the particular species- man, bird, and particular kind of bird.

The imaging of Quantity upon Matter by an outside power is not more surprising than the imaging of Quality; Quality is no doubt a Reason-Principle, but Quantity also- being measure, number- is equally so.

9. But how can we conceive a thing having existence without having magnitude?

We have only to think of things whose identity does not depend on their quantity- for certainly magnitude can be distinguished from existence as can many other forms and attributes.

In a word, every unembodied Kind must be classed as without quantity, and Matter is unembodied.

Besides quantitateness itself [the Absolute-Principle] does not possess quantity, which belongs only to things participating in it, a consideration which shows that Quantitateness is an Idea-Principle. A white object becomes white by the presence of whiteness; what makes an organism white or of any other variety of colour is not itself a specific colour but, so to speak, a specific Reason-Principle: in the same way what gives an organism a certain bulk is not itself a thing of magnitude but is Magnitude itself, the abstract Absolute, or the Reason-Principle.

This Magnitude-Absolute, then, enters and beats the Matter out into Magnitude?

Not at all: the Matter was not previously shrunken small: there was no littleness or bigness: the Idea gives Magnitude exactly as it gives every quality not previously present.

10. But how can I form the conception of the sizelessness of Matter?

How do you form the concept of any absence of quality? What is the Act of the Intellect, what is the mental approach, in such a case?

The secret is Indetermination.

Likeness knows its like: the indeterminate knows the indeterminate. Around this indefinite a definite conception will be realized, but the way lies through indefiniteness.

All knowledge comes by Reason and the Intellectual Act; in this case Reason conveys information in any account it gives, but the act which aims at being intellectual is, here, not intellection but rather its failure: therefore the representation of Matter must be spurious, unreal, something sprung of the Alien, of the unreal, and bound up with the alien reason.

This is Plato's meaning where he says that Matter is apprehended by a sort of spurious reasoning.

What, then, is this indetermination in the Soul? Does it amount to an utter absence of Knowledge, as if the Soul or Mind had withdrawn?

No: the indeterminate has some footing in the sphere of affirmation. The eye is aware of darkness as a base capable of receiving any colour not yet seen against it: so the Mind,

putting aside all attributes perceptible to sense- all that corresponds to light- comes upon a residuum which it cannot bring under determination: it is thus in the state of the eye which, when directed towards darkness, has become in some way identical with the object of its spurious vision.

There is vision, then, in this approach of the Mind towards Matter?

Some vision, yes; of shapelessness, of colourlessness, of the unlit, and therefore of the sizeless. More than this would mean that the Soul is already bestowing Form.

But is not such a void precisely what the Soul experiences when it has no intellection whatever?

No: in that case it affirms nothing, or rather has no experience: but in knowing Matter, it has an experience, what may be described as the impact of the shapeless; for in its very consciousness of objects that have taken shape and size it knows them as compounds [i.e., as possessing with these forms a formless base] for they appear as things that have accepted colour and other quality.

It knows, therefore, a whole which includes two components; it has a clear Knowledge or perception of the overlie [the Ideas] but only a dim awareness of the underlie, the shapeless which is not an Ideal-Principle.

With what is perceptible to it there is presented something else: what it can directly apprehend it sets on one side as its own; but the something else which Reason rejects, this, the dim, it knows dimly, this, the dark, it knows darkly, this it knows in a sort of non-knowing.

And just as even Matter itself is not stably shapeless but, in things, is always shaped, the Soul also is eager to throw over it the thing-form; for the Soul recoils from the indefinite, dreads, almost, to be outside of reality, does not endure to linger about Non-Being.

11. "But, given Magnitude and the properties we know, what else can be necessary to the existence of body?"

Some base to be the container of all the rest.

"A certain mass then; and if mass, then Magnitude? Obviously if your Base has no Magnitude it offers no footing to any entrant. And suppose it sizeless; then, what end does it serve? It never helped Idea or quality; now it ceases to account for differentiation or for magnitude, though the last, wheresoever it resides, seems to find its way into embodied entities by way of Matter."

"Or, taking a larger view, observe that actions, productive operations, periods of time, movements, none of these have any such substratum and yet are real things; in the same way the most elementary body has no need of Matter; things may be, all, what

they are, each after its own kind, in their great variety, deriving the coherence of their being from the blending of the various Ideal-Forms. This Matter with its sizelessness seems, then, to be a name without a content."

Now, to begin with: extension is not an imperative condition of being a recipient; it is necessary only where it happens to be a property inherent to the recipient's peculiar mode of being. The Soul, for example, contains all things but holds them all in an unextended unity; if magnitude were one of its attributes it would contain things in extension. Matter does actually contain in spatial extension what it takes in; but this is because itself is a potential recipient of spatial extension: animals and plants, in the same way, as they increase in size, take quality in parallel development with quantity, and they lose in the one as the other lessens.

No doubt in the case of things as we know them there is a certain mass lying ready beforehand to the shaping power: but that is no reason for expecting bulk in Matter strictly so called; for in such cases Matter is not the absolute; it is that of some definite object; the Absolute Matter must take its magnitude, as every other property, from outside itself.

A thing then need not have magnitude in order to receive form: it may receive mass with everything else that comes to it at the moment of becoming what it is to be: a phantasm of mass is enough, a primary aptness for extension, a magnitude of no content- whence the identification that has been made of Matter with The Void.

But I prefer to use the word phantasm as hinting the indefiniteness into which the Soul spills itself when it seeks to communicate with Matter, finding no possibility of delimiting it, neither encompassing it nor able to penetrate to any fixed point of it, either of which achievements would be an act of delimitation.

In other words, we have something which is to be described not as small or great but as the great-and-small: for it is at once a mass and a thing without magnitude, in the sense that it is the Matter on which Mass is based and that, as it changes from great to small and small to great, it traverses magnitude. Its very undeterminateness is a mass in the same sense that of being a recipient of Magnitude- though of course only in the visible object.

In the order of things without Mass, all that is Ideal-Principle possesses delimitation, each entity for itself, so that the conception of Mass has no place in them: Matter, not delimited, having in its own nature no stability, swept into any or every form by turns, ready to go here, there and everywhere, becomes a thing of multiplicity: driven into all shapes, becoming all things, it has that much of the character of mass.

12. It is the corporeal, then, that demands magnitude: the Ideal-Forms of body are Ideas installed in Mass.

But these Ideas enter, not into Magnitude itself but into some subject that has been brought to Magnitude. For to suppose them entering into Magnitude and not into Matter-

is to represent them as being either without Magnitude and without Real-Existence [and therefore undistinguishable from the Matter] or not Ideal-Forms [apt to body] but Reason-Principles [utterly removed] whose sphere could only be Soul; at this, there would be no such thing as body [i.e., instead of Ideal-Forms shaping Matter and so producing body, there would be merely Reason-Principles dwelling remote in Soul.]

The multiplicity here must be based upon some unity which, since it has been brought to Magnitude, must be, itself, distinct from Magnitude. Matter is the base of Identity to all that is composite: once each of the constituents comes bringing its own Matter with it, there is no need of any other base. No doubt there must be a container, as it were a place, to receive what is to enter, but Matter and even body precede place and space; the primal necessity, in order to the existence of body, is Matter.

There is no force in the suggestion that, since production and act are immaterial, corporeal entities also must be immaterial.

Bodies are compound, actions not. Further, Matter does in some sense underlie action; it supplies the substratum to the doer: it is permanently within him though it does not enter as a constituent into the act where, indeed, it would be a hindrance. Doubtless, one act does not change into another- as would be the case if there were a specific Matter of actions- but the doer directs himself from one act to another so that he is the Matter, himself, to his varying actions.

Matter, in sum, is necessary to quality and to quantity, and, therefore, to body.

It is, thus, no name void of content; we know there is such a base, invisible and without bulk though it be.

If we reject it, we must by the same reasoning reject qualities and mass: for quality, or mass, or any such entity, taken by itself apart, might be said not to exist. But these do exist, though in an obscure existence: there is much less ground for rejecting Matter, however it lurk, discerned by none of the senses.

It eludes the eye, for it is utterly outside of colour: it is not heard, for it is no sound: it is no flavour or savour for nostrils or palate: can it, perhaps, be known to touch? No: for neither is it corporeal; and touch deals with body, which is known by being solid, fragile, soft, hard, moist, dry- all properties utterly lacking in Matter.

It is grasped only by a mental process, though that not an act of the intellective mind but a reasoning that finds no subject; and so it stands revealed as the spurious thing it has been called. No bodiliness belongs to it; bodiliness is itself a phase of Reason-Principle and so is something different from Matter, as Matter, therefore, from it: bodiliness already operative and so to speak made concrete would be body manifest and not Matter unelaborated.

13. Are we asked to accept as the substratum some attribute or quality present to all the elements in common?

Then, first, we must be told what precise attribute this is and, next, how an attribute can be a substratum.

The elements are sizeless, and how conceive an attribute where there is neither base nor bulk?

Again, if the quality possesses determination, it is not Matter the undetermined; and anything without determination is not a quality but is the substratum- the very Matter we are seeking.

It may be suggested that perhaps this absence of quality means simply that, of its own nature, it has no participation in any of the set and familiar properties, but takes quality by this very non-participation, holding thus an absolutely individual character, marked off from everything else, being as it were the negation of those others. Deprivation, we will be told, comports quality: a blind man has the quality of his lack of sight. If then- it will be urged- Matter exhibits such a negation, surely it has a quality, all the more so, assuming any deprivation to be a quality, in that here the deprivation is all comprehensive.

But this notion reduces all existence to qualified things or qualities: Quantity itself becomes a Quality and so does even Existence. Now this cannot be: if such things as Quantity and Existence are qualified, they are, by that very fact, not qualities: Quality is an addition to them; we must not commit the absurdity of giving the name Quality to something distinguishable from Quality, something therefore that is not Quality.

Is it suggested that its mere Alienism is a quality in Matter?

If this Alienism is difference-absolute [the abstract entity] it possesses no Quality: absolute Quality cannot be itself a qualified thing.

If the Alienism is to be understood as meaning only that Matter is differentiated, then it is different not by itself [since it is certainly not an absolute] but by this Difference, just as all identical objects are so by virtue of Identicalness [the Absolute principle of Identity].

An absence is neither a Quality nor a qualified entity; it is the negation of a Quality or of something else, as noiselessness is the negation of noise and so on. A lack is negative; Quality demands something positive. The distinctive character of Matter is unshape, the lack of qualification and of form; surely then it is absurd to pretend that it has Quality in not being qualified; that is like saying that sizelessness constitutes a certain size.

The distinctive character of Matter, then, is simply its manner of being- not something definite inserted in it but, rather a relation towards other things, the relation of being distinct from them.

Other things possess something besides this relation of Alienism: their form makes

each an entity. Matter may with propriety be described as merely alien; perhaps, even, we might describe it as "The Aliens," for the singular suggests a certain definiteness while the plural would indicate the absence of any determination.

14. But is Absence this privation itself, or something in which this Privation is lodged?

Anyone maintaining that Matter and Privation are one and the same in substratum but stand separable in reason cannot be excused from assigning to each the precise principle which distinguishes it in reason from the other: that which defines Matter must be kept quite apart from that defining the Privation and vice versa.

There are three possibilities: Matter is not in Privation and Privation is not in Matter; or each is in each; or each is in itself alone.

Now if they should stand quite apart, neither calling for the other, they are two distinct things: Matter is something other than Privation even though Privation always goes with it: into the principle of the one, the other cannot enter even potentially.

If their relation to each other is that of a snubnose to snubness, here also there is a double concept; we have two things.

If they stand to each other as fire to heat- heat in fire, but fire not included in the concept of heat- if Matter is Privation in the way in which fire is heat, then the Privation is a form under which Matter appears but there remains a base distinct from the Privation and this base must be the Matter. Here, too, they are not one thing.

Perhaps the identity in substance with differentiation in reason will be defended on the ground that Privation does not point to something present but precisely to an absence, to something absent, to the negation or lack of Real-being: the case would be like that of the affirmation of non-existence, where there is no real predication but simply a denial.

Is, then, this Privation simply a non-existence?

If a non-existence in the sense that it is not a thing of Real-being, but belongs to some other Kind of existent, we have still two Principles, one referring directly to the substratum, the other merely exhibiting the relation of the Privation to other things.

Or we might say that the one concept defines the relation of substratum to what is not substratum, while that of Privation, in bringing out the indeterminateness of Matter, applies to the Matter in itself: but this still makes Privation and Matter two in reason though one in substratum.

Now if Matter possesses an identity- though only the identity of being indeterminate, unfixed and without quality- how can we bring it so under two principles?

15. The further question, therefore, is raised whether boundlessness and

indetermination are things lodging in something other than themselves as a sort of attribute and whether Privation [or Negation of quality] is also an attribute residing in some separate substratum.

Now all that is Number and Reason-Principle is outside of boundlessness: these bestow bound and settlement and order in general upon all else: neither anything that has been brought under order nor any Order-Absolute is needed to bring them under order. The thing that has to be brought under order [e.g., Matter] is other than the Ordering Principle which is Limit and Definiteness and Reason-Principle. Therefore, necessarily, the thing to be brought under order and to definiteness must be in itself a thing lacking delimitation.

Now Matter is a thing that is brought under order- like all that shares its nature by participation or by possessing the same principle- therefore, necessarily, Matter is The Undelimited and not merely the recipient of a nonessential quality of Indefiniteness entering as an attribute.

For, first, any attribute to any subject must be a Reason-Principle; and Indefiniteness is not a Reason-Principle.

Secondly, what must a thing be to take Indefiniteness as an attribute? Obviously it must, beforehand, be either Definiteness or a defined thing. But Matter is neither.

Then again Indefiniteness entering as an attribute into the definite must cease to be indefinite: but Indefiniteness has not entered as an attribute into Matter: that is, Matter is essentially Indefiniteness.

The Matter even of the Intellectual Realm is the Indefinite, [the undelimited]; it must be a thing generated by the undefined nature, the illimitable nature, of the Eternal Being, The One illimitableness, however, not possessing native existence There but engendered by The One.

But how can Matter be common to both spheres, be here and be There?

Because even Indefiniteness has two phases.

But what difference can there be between phase and phase of Indefiniteness?

The difference of archetype and image.

So that Matter here [as only an image of Indefiniteness] would be less indefinite?

On the contrary, more indefinite as an Image-thing remote from true being. Indefiniteness is the greater in the less ordered object; the less deep in good, the deeper in evil. The Indeterminate in the Intellectual Realm, where there is truer being, might almost be called merely an Image of Indefiniteness: in this lower Sphere where there is less Being, where there is a refusal of the Authentic, and an adoption of the

Image-Kind, Indefiniteness is more authentically indefinite.

But this argument seems to make no difference between the indefinite object and Indefiniteness-essential. Is there none?

In any object in which Reason and Matter co-exist we distinguish between Indeterminateness and the Indeterminate subject: but where Matter stands alone we make them identical, or, better, we would say right out that in that case essential Indeterminateness is not present; for it is a Reason-Principle and could not lodge in the indeterminate object without at once annulling the indeterminateness.

Matter, then, must be described as Indefinite of itself, by its natural opposition to Reason-Principle. Reason is Reason and nothing else; just so Matter, opposed by its indeterminateness to Reason, is Indeterminateness and nothing else.

16. Then Matter is simply Alienism [the Principle of Difference]?

No: it is merely that part of Alienism which stands in contradiction with the Authentic Existents which are Reason-Principles. So understood, this non-existent has a certain measure of existence; for it is identical with Privation, which also is a thing standing in opposition to the things that exist in Reason.

But must not Privation cease to have existence, when what has been lacking is present at last?

By no means: the recipient of a state or character is not a state but the Privation of the state; and that into which determination enters is neither a determined object nor determination itself, but simply the wholly or partly undetermined.

Still, must not the nature of this Undetermined be annulled by the entry of Determination, especially where this is no mere attribute?

No doubt to introduce quantitative determination into an undetermined object would annul the original state; but in the particular case, the introduction of determination only confirms the original state, bringing it into actuality, into full effect, as sowing brings out the natural quality of land or as a female organism impregnated by the male is not defeminized but becomes more decidedly of its sex; the thing becomes more emphatically itself.

But on this reasoning must not Matter owe its evil to having in some degree participated in good?

No: its evil is in its first lack: it was not a possessor (of some specific character).

To lack one thing and to possess another, in something like equal proportions, is to hold a middle state of good and evil: but whatsoever possesses nothing and so is in destitution- and especially what is essentially destitution- must be evil in its own Kind.

For in Matter we have no mere absence of means or of strength; it is utter destitution- of sense, of virtue, of beauty, of pattern, of Ideal principle, of quality. This is surely ugliness, utter disgracefulness, unredeemed evil.

The Matter in the Intellectual Realm is an Existent, for there is nothing previous to it except the Beyond-Existence; but what precedes the Matter of this sphere is Existence; by its alienism in regard to the beauty and good of Existence, Matter is therefore a non-existent.

FIFTH TRACTATE.

ON POTENTIALITY AND ACTUALITY.

1. A distinction is made between things existing actually and things existing potentially; a certain Actuality, also, is spoken of as a really existent entity. We must consider what content there is in these terms.

Can we distinguish between Actuality [an absolute, abstract Principle] and the state of being-in-act? And if there is such an Actuality, is this itself in Act, or are the two quite distinct so that this actually existent thing need not be, itself, an Act?

It is indubitable that Potentiality exists in the Realm of Sense: but does the Intellectual Realm similarly include the potential or only the actual? and if the potential exists there, does it remain merely potential for ever? And, if so, is this resistance to actualization due to its being precluded [as a member of the Divine or Intellectual world] from time-processes?

First we must make clear what potentiality is.

We cannot think of potentiality as standing by itself; there can be no potentiality apart from something which a given thing may be or become. Thus bronze is the potentiality of a statue: but if nothing could be made out of the bronze, nothing wrought upon it, if it could never be anything as a future to what it has been, if it rejected all change, it would be bronze and nothing else: its own character it holds already as a present thing, and that would be the full of its capacity: it would be destitute of potentiality. Whatsoever has a potentiality must first have a character of its own; and its potentiality will consist in its having a reach beyond that character to some other.

Sometimes after it has turned its potentiality into actuality it will remain what it was; sometimes it will sink itself to the fullest extent in the new form and itself disappear: these two different modes are exemplified in (1) bronze as potentially a statue and (2) water [= primal-liquid] as potentially bronze or, again, air as potentially fire.

But if this be the significance of potentiality, may we describe it as a Power towards the thing that is to be? Is the Bronze a power towards a statue?

Not in the sense of an effectively productive force: such a power could not be called a potentiality. Of course Potentiality may be a power, as, for instance, when we are referring not merely to a thing which may be brought into actualization but to Actuality itself [the Principle or Abstract in which potentiality and the power of realizing potentiality may be thought of as identical]: but it is better, as more conducive to clarity, to use "Potentiality" in regard to the process of Actualization and "Power" in regard to the Principle, Actuality.

Potentiality may be thought of as a Substratum to states and shapes- and forms which are to be received, which it welcomes by its nature and even strives for- sometimes in gain but sometimes, also, to loss, to the annulling of some distinctive manner of Being already actually achieved.

2. Then the question rises whether Matter- potentially what it becomes by receiving shape- is actually something else or whether it has no actuality at all. In general terms: When a potentiality has taken a definite form, does it retain its being? Is the potentiality, itself, in actualization? The alternative is that, when we speak of the "Actual Statue" and of the "Potential Statue," the Actuality is not predicated of the same subject as the "Potentiality." If we have really two different subjects, then the potential does not really become the actual: all that happens is that an actual entity takes the place of a potential.

The actualized entity is not the Matter [the Potentiality, merely] but a combination, including the Form-Idea upon the Matter.

This is certainly the case when a quite different thing results from the actualization- statue, for example, the combination, is distinctly different from the bronze, the base; where the resultant is something quite new, the Potentiality has clearly not, itself, become what is now actualized. But take the case where a person with a capacity for education becomes in fact educated: is not potentiality, here, identical with actualization? Is not the potentially wise Socrates the same man as the Socrates actually wise?

But is an ignorant man a being of knowledge because he is so potentially? Is he, in virtue of his non-essential ignorance, potentially an instructed being?

It is not because of his accidental ignorance that he is a being of Knowledge: it is because, ignorant though he be by accident, his mind, apt to knowledge, is the potentiality through which he may become so. Thus, in the case of the potentially instructed who have become so in fact, the potentiality is taken up into the actual; or, if we prefer to put it so, there is on the one side the potentiality while, on the other, there is the power in actual possession of the form.

If, then, the Potentiality is the Substratum while the thing in actualization- the Statue for example a combination, how are we to describe the form that has entered the bronze?

There will be nothing unsound in describing this shape, this Form which has brought the

entity from potentiality to actuality, as the actualization; but of course as the actualization of the definite particular entity, not as Actuality the abstract: we must not confuse it with the other actualization, strictly so called, that which is contrasted with the power producing actualization. The potential is led out into realization by something other than itself; power accomplishes, of itself, what is within its scope, but by virtue of Actuality [the abstract]: the relation is that existing between a temperament and its expression in act, between courage and courageous conduct. So far so good:

3. We come now to the purpose of all this discussion; to make clear in what sense or to what degree Actualization is predicable in the Intellectual Realm and whether all is in Actualization there, each and every member of that realm being an Act, or whether Potentiality also has place there.

Now: if there is no Matter there to harbour potentiality: if nothing there has any future apart from its actual mode: if nothing there generates, whether by changes or in the permanence of its identity; if nothing goes outside of itself to give being to what is other than itself; then, potentiality has no place there: the Beings there possess actuality as belonging to eternity, not to time.

Those, however, who assert Matter in the Intellectual Realm will be asked whether the existence of that Matter does not imply the potential there too; for even if Matter there exists in another mode than here, every Being there will have its Matter, its form and the union of the two [and therefore the potential, separable from the actual]. What answer is to be made?

Simply, that even the Matter there is Idea, just as the Soul, an Idea, is Matter to another [a higher] Being.

But relatively to that higher, the Soul is a potentiality?

No: for the Idea [to which it is Matter] is integral to the Soul and does not look to a future; the distinction between the Soul and its Idea is purely mental: the Idea and the Matter it includes are conceived as a conjunction but are essentially one Kind: remember that Aristotle makes his Fifth Body immaterial.

But surely Potentiality exists in the Soul? Surely the Soul is potentially the living-being of this world before it has become so? Is it not potentially musical, and everything else that it has not been and becomes? Does not this imply potentiality even in the Intellectual Existences?

No: the Soul is not potentially these things; it is a Power towards them.

But after what mode does Actualization exist in the Intellectual Realm?

Is it the Actualization of a statue, where the combination is realized because the Form-Idea has mastered each separate constituent of the total?

No: it is that every constituent there is a Form-Idea and, thus, is perfect in its Being.

There is in the Intellectual Principle no progression from some power capable of intellection to the Actuality of intellection: such a progression would send us in search of a Prior Principle not progressing from Power to Act; there all stands ever realized. Potentiality requires an intervention from outside itself to bring it to the actualization which otherwise cannot be; but what possesses, of itself, identity unchangeable for ever is an actualization: all the Firsts then are actualizations, simply because eternally and of themselves they possess all that is necessary to their completion.

This applies equally to the Soul, not to that in Matter but to that in the Intellectual Sphere; and even that in Matter, the Soul of Growth, is an actualization in its difference; it possesses actually [and not, like material things, merely in image] the Being that belongs to it.

Then, everything, in the intellectual is in actualization and so all There is Actuality?

Why not? If that Nature is rightly said to be "Sleepless," and to be Life and the noblest mode of Life, the noblest Activities must be there; all then is actualization there, everything is an Actuality, for everything is a Life, and all Place there is the Place of Life, in the true sense the ground and spring of Soul and of the Intellectual Principle.

4. Now, in general anything that has a potentiality is actually something else, and this potentiality of the future mode of being is an existing mode.

But what we think of as Matter, what we assert to be the potentiality of all things, cannot be said to be actually any one being among beings: if it were of itself any definite being, it could not be potentially all.

If, then, it is not among existences, it must necessarily be without existence.

How, therefore, can it be actually anything?

The answer is that while Matter can not be any of the things which are founded upon it, it may quite well be something else, admitting that all existences are not rooted in Matter.

But once more, if it is excluded from the entities founded upon it and all these are Beings, it must itself be a Non-Being.

It is, further, by definition, formless and therefore not an Idea: it cannot then be classed among things of the Intellectual Realm, and so is, once more, a Non-Being. Falling, as regards both worlds, under Non-Being, it is all the more decidedly the Non-Being.

It has eluded the Nature of the Authentic Existences; it has even failed to come up with the things to which a spurious existence can be attributed- for it is not even a phantasm of Reason as these are- how is it possible to include it under any mode of Being?

And if it falls under no mode of Being, what can it actually be?

5. How can we talk of it? How can it be the Matter of real things?

It is talked of, and it serves, precisely, as a Potentiality.

And, as being a Potentiality, it is not of the order of the thing it is to become: its existence is no more than an announcement of a future, as it were a thrust forward to what is to come into existence.

As Potentiality then, it is not any definite thing but the potentiality of everything: being nothing in itself- beyond what being Matter amounts to- it is not in actualization. For if it were actually something, that actualized something would not be Matter, or at least not Matter out and out, but merely Matter in the limited sense in which bronze is the matter of the statue.

And its Non-Being must be no mere difference from Being.

Motion, for example, is different from Being, but plays about it, springing from it and living within it: Matter is, so to speak, the outcast of Being, it is utterly removed, irredeemably what it was from the beginning: in origin it was Non-Being and so it remains.

Nor are we to imagine that, standing away at the very beginning from the universal circle of Beings, it was thus necessarily an active Something or that it became a Something. It has never been able to annex for itself even a visible outline from all the forms under which it has sought to creep: it has always pursued something other than itself; it was never more than a Potentiality towards its next: where all the circle of Being ends, there only is it manifest; discerned underneath things produced after it, it is remoter [from Real-Being] even than they.

Grasped, then, as an underlie in each order of Being, it can be no actualization of either: all that is allowed to it is to be a Potentiality, a weak and blurred phantasm, a thing incapable of a Shape of its own.

Its actuality is that of being a phantasm, the actuality of being a falsity; and the false in actualization is the veritably false, which again is Authentic Non-Existence.

So that Matter, as the Actualization of Non-Being, is all the more decidedly Non-Being, is Authentic Non-Existence.

Thus, since the very reality of its Nature is situated in Non-Being, it is in no degree the Actualization of any definite Being.

If it is to be present at all, it cannot be an Actualization, for then it would not be the stray from Authentic Being which it is, the thing having its Being in Non-Beingness: for, note,

in the case of things whose Being is a falsity, to take away the falsity is to take away what Being they have, and if we introduce actualization into things whose Being and Essence is Potentiality, we destroy the foundation of their nature since their Being is Potentiality.

If Matter is to be kept as the unchanging substratum, we must keep it as Matter: that means- does it not?- that we must define it as a Potentiality and nothing more- or refute these considerations.

SIXTH TRACTATE.

QUALITY AND FORM-IDEA.

1. Are not Being and Reality (to on and he ousia) distinct; must we not envisage Being as the substance stripped of all else, while Reality is this same thing, Being, accompanied by the others- Movement, Rest, Identity, Difference- so that these are the specific constituents of Reality?

The universal fabric, then, is Reality in which Being, Movement, and so on are separate constituents.

Now Movement has Being as an accident and therefore should have Reality as an accident; or is it something serving to the completion of Reality?

No: Movement is a Reality; everything in the Supreme is a Reality.

Why, then, does not Reality reside, equally, in this sphere?

In the Supreme there is Reality because all things are one; ours is the sphere of images whose separation produces grades of difference. Thus in the spermatic unity all the human members are present undistinguishably; there is no separation of head and hand: their distinct existence begins in the life here, whose content is image, not Authentic Existence.

And are the distinct Qualities in the Authentic Realm to be explained in the same way? Are they differing Realities centred in one Reality or gathered round Being- differences which constitute Realities distinct from each other within the common fact of Reality?

This is sound enough; but it does not apply to all the qualities of this sphere, some of which, no doubt, are differentiations of Reality- such as the quality of two-footedness or four-footedness- but others are not such differentiations of Reality and, because they are not so, must be called qualities and nothing more.

On the other hand, one and the same thing may be sometimes a differentiation of Reality and sometimes not- a differentiation when it is a constitutive element, and no differentiation in some other thing, where it is not a constitutive element but an accidental. The distinction may be seen in the [constitutive] whiteness of a swan or of

ceruse and the whiteness which in a man is an accidental.

Where whiteness belongs to the very Reason-Form of the thing it is a constitutive element and not a quality; where it is a superficial appearance it is a quality.

In other words, qualification may be distinguished. We may think of a qualification that is of the very substance of the thing, something exclusively belonging to it. And there is a qualifying that is nothing more, [not constituting but simply] giving some particular character to the real thing; in this second case the qualification does not produce any alteration towards Reality or away from it; the Reality has existed fully constituted before the incoming of the qualification which- whether in soul or body- merely introduces some state from outside, and by this addition elaborates the Reality into the particular thing.

But what if [the superficial appearance such as] the visible whiteness in ceruse is constitutive? In the swan the whiteness is not constitutive since a swan need not be white: it is constitutive in ceruse, just as warmth is constitutive of the Reality, fire.

No doubt we may be told that the Reality in fire is [not warmth but] fieriness and in ceruse an analogous abstraction: yet the fact remains that in visible fire warmth or fieriness is constitutive and in the ceruse whiteness.

Thus the same entities are represented at once as being not qualities but constituents of Reality and not constituents but qualities.

Now it is absurd to talk as if one identical thing changed its own nature according to whether it is present as a constituent or as an accidental.

The truth is that while the Reason-Principles producing these entities contain nothing but what is of the nature of Reality, yet only in the Intellectual Realm do the produced things possess real existence: here they are not real; they are qualified.

And this is the starting-point of an error we constantly make: in our enquiries into things we let realities escape us and fasten on what is mere quality. Thus fire is not the thing we so name from the observation of certain qualities present; fire is a Reality [not a combination of material phenomena]; the phenomena observed here and leading us to name fire call us away from the authentic thing; a quality is erected into the very matter of definition- a procedure, however, reasonable enough in regard to things of the realm of sense which are in no case realities but accidents of Reality.

And this raises the question how Reality can ever spring from what are not Realities.

It has been shown that a thing coming into being cannot be identical with its origins: it must here be added that nothing thus coming into being [no "thing of process"] can be a Reality.

Then how do we assert the rising in the Supreme of what we have called Reality from

what is not Reality [i.e., from the pure Being which is above Reality]?

The Reality there- possessing Authentic Being in the strictest sense, with the least admixture- is Reality by existing among the differentiations of the Authentic Being; or, better, Reality is affirmed in the sense that with the existence of the Supreme is included its Act so that Reality seems to be a perfectionment of the Authentic Being, though in the truth it is a diminution; the produced thing is deficient by the very addition, by being less simplex, by standing one step away from the Authentic.

2. But we must enquire into Quality in itself: to know its nature is certainly the way to settle our general question.

The first point is to assure ourselves whether or not one and the same thing may be held to be sometimes a mere qualification and sometimes a constituent of Reality- not staying on the point that qualification could not be constitutive of a Reality but of a qualified Reality only.

Now in a Reality possessing a determined quality, the Reality and the fact of existence precede the qualified Reality.

What, then, in the case of fire is the Reality which precedes the qualified Reality?

Its mere body, perhaps? If so, body being the Reality, fire is a warmed body; and the total thing is not the Reality; and the fire has warmth as a man might have a snub nose.

Rejecting its warmth, its glow, its lightness- all which certainly do seem to be qualities- and its resistance, there is left only its extension by three dimensions: in other words, its Matter is its Reality.

But that cannot be held: surely the form is much more likely than the Matter to be the Reality.

But is not the Form of Quality?

No, the Form is not a Quality: it is a Reason-Principle.

And the outcome of this Reason-Principle entering into the underlying Matter, what is that?

Certainly not what is seen and burns, for that is the something in which these qualities inhere.

We might define the burning as an Act springing from the Reason-Principle: then the warming and lighting and other effects of fire will be its Acts and we still have found no foothold for its quality.

Such completions of a Reality cannot be called qualities since they are its Acts

emanating from the Reason-Principles and from the essential powers. A quality is something persistently outside Reality; it cannot appear as Reality in one place after having figured in another as quality; its function is to bring in the something more after the Reality is established, such additions as virtue, vice, ugliness, beauty, health, a certain shape. On this last, however, it may be remarked that triangularity and quadrangularity are not in themselves qualities, but there is quality when a thing is triangular by having been brought to that shape; the quality is not the triangularity but the patterning to it. The case is the same with the arts and avocations.

Thus: Quality is a condition superadded to a Reality whose existence does not depend upon it, whether this something more be a later acquirement or an accompaniment from the first; it is something in whose absence the Reality would still be complete. It will sometimes come and go, sometimes be inextricably attached, so that there are two forms of Quality, the moveable and the fixed.

3. The Whiteness, therefore, in a human being is, clearly, to be classed not as a quality but as an activity- the act of a power which can make white; and similarly what we think of as qualities in the Intellectual Realm should be known as activities; they are activities which to our minds take the appearance of quality from the fact that, differing in character among themselves, each of them is a particularity which, so to speak, distinguishes those Realities from each other.

What, then, distinguishes Quality in the Intellectual Realm from that here, if both are Acts?

The difference is that these ["Quality-Activities"] in the Supreme do not indicate the very nature of the Reality [as do the corresponding Activities here] nor do they indicate variations of substance or of [essential] character; they merely indicate what we think of as Quality but in the Intellectual Realm must still be Activity.

In other words this thing, considered in its aspect as possessing the characteristic property of Reality is by that alone recognised as no mere Quality. But when our reason separates what is distinctive in these ["Quality-Activities"]- not in the sense of abolishing them but rather as taking them to itself and making something new of them- this new something is Quality: reason has, so to speak, appropriated a portion of Reality, that portion manifest to it on the surface.

By this analogy, warmth, as a concomitant of the specific nature of fire, may very well be no quality in fire but an Idea-Form belonging to it, one of its activities, while being merely a Quality in other things than fire: as it is manifested in any warm object, it is not a mode of Reality but merely a trace, a shadow, an image, something that has gone forth from its own Reality- where it was an Act- and in the warm object is a quality.

All, then, that is accident and not Act; all but what is Idea-form of the Reality; all that merely confers pattern; all this is Quality: qualities are characteristics and modes other than those constituting the substratum of a thing.

But the Archetypes of all such qualities, the foundation in which they exist primarily, these are Activities of the Intellectual Beings.

And; one and the same thing cannot be both Quality and non-quality: the thing void of Real-Existence is Quality; but the thing accompanying Reality is either Form or Activity: there is no longer self-identity when, from having its being in itself, anything comes to be in something else with a fall from its standing as Form and Activity.

Finally, anything which is never Form but always accidental to something else is Quality unmixed and nothing more.

SEVENTH TRACTATE.

ON COMPLETE TRANSFUSION.

1. Some enquiry must be made into what is known as the complete transfusion of material substances.

Is it possible that fluid be blended with fluid in such a way that each penetrate the other through and through? or- a difference of no importance if any such penetration occurs- that one of them pass completely through the other?

Those that admit only contact need not detain us. They are dealing with mixture, not with the coalescence which makes the total a thing of like parts, each minutest particle being composed of all the combined elements.

But there are those who, admitting coalescence, confine it to the qualities: to them the material substances of two bodies are in contact merely, but in this contact of the matter they find footing for the qualities of each.

Their view is plausible because it rejects the notion of total admixture and because it recognizes that the masses of the mixing bodies must be whittled away if there is to be mixture without any gap, if, that is to say, each substance must be divided within itself through and through for complete interpenetration with the other. Their theory is confirmed by the cases in which two mixed substances occupy a greater space than either singly, especially a space equal to the conjoined extent of each: for, as they point out, in an absolute interpenetration the infusion of the one into the other would leave the occupied space exactly what it was before and, where the space occupied is not increased by the juxtaposition, they explain that some expulsion of air has made room for the incoming substance. They ask further, how a minor quantity of one substance can be spread out so as to interpenetrate a major quantity of another. In fact they have a multitude of arguments.

Those, on the other hand, that accept "complete transfusion," might object that it does not require the reduction of the mixed things to fragments, a certain cleavage being sufficient: thus, for instance, sweat does not split up the body or even pierce holes in it. And if it is answered that this may well be a special decree of Nature to allow of the

sweat exuding, there is the case of those manufactured articles, slender but without puncture, in which we can see a liquid wetting them through and through so that it runs down from the upper to the under surface. How can this fact be explained, since both the liquid and the solid are bodily substances? Interpenetration without disintegration is difficult to conceive, and if there is such mutual disintegration the two must obviously destroy each other.

When they urge that often there is a mixing without augmentation their adversaries can counter at once with the exit of air.

When there is an increase in the space occupied, nothing refutes the explanation- however unsatisfying- that this is a necessary consequence of two bodies bringing to a common stock their magnitude equally with their other attributes: size is as permanent as any other property; and, exactly as from the blending of qualities there results a new form of thing, the combination of the two, so we find a new magnitude; the blending gives us a magnitude representing each of the two. But at this point the others will answer, "If you mean that substance lies side by side with substance and mass with mass, each carrying its quantum of magnitude, you are at one with us: if there were complete transfusion, one substance sinking its original magnitude in the other, we would have no longer the case of two lines joined end to end by their terminal points and thus producing an increased extension; we would have line superimposed upon line with, therefore, no increase."

But a lesser quantity permeates the entire extent of a larger; the smallest is sunk in the greatest; transfusion is exhibited unmistakably. In certain cases it is possible to pretend that there is no total penetration but there are manifest examples leaving no room for the pretence. In what they say of the spreading out of masses they cannot be thought very plausible; the extension would have to be considerable indeed in the case of a very small quantity [to be in true mixture with a very large mass]; for they do not suggest any such extension by change as that of water into air.

2. This, however, raises a problem deserving investigation in itself: what has happened when a definite magnitude of water becomes air, and how do we explain the increase of volume? But for the present we must be content with the matter thus far discussed out of all the varied controversy accumulated on either side.

It remains for us to make out on our own account the true explanation of the phenomenon of mixing, without regard to the agreement or disagreement of that theory with any of the current opinions mentioned.

When water runs through wool or when papyrus-pulp gives up its moisture why is not the moist content expressed to the very last drop or even, without question of outflow, how can we possibly think that in a mixture the relation of matter with matter, mass with mass, is contact and that only the qualities are fused? The pulp is not merely in touch with water outside it or even in its pores; it is wet through and through so that every particle of its matter is drenched in that quality. Now if the matter is soaked all through with the quality, then the water is everywhere in the pulp.

“Not the water; the quality of the water.”

But then, where is the water? and [if only a quality has entered] why is there a change of volume? The pulp has been expanded by the addition: that is to say it has received magnitude from the incoming substance but if it has received the magnitude, magnitude has been added; and a magnitude added has not been absorbed; therefore the combined matter must occupy two several places. And as the two mixing substances communicate quality and receive matter in mutual give and take so they may give and take magnitude. Indeed when a quality meets another quality it suffers some change; it is mixed, and by that admixture it is no longer pure and therefore no longer itself but a blunter thing, whereas magnitude joining magnitude retains its full strength.

But let it be understood how we came to say that body passing through and through another body must produce disintegration, while we make qualities pervade their substances without producing disintegration: the bodilessness of qualities is the reason. Matter, too, is bodiless: it may, then, be supposed that as Matter pervades everything so the bodiless qualities associated with it- as long as they are few- have the power of penetration without disintegration. Anything solid would be stopped either in virtue of the fact that a solid has the precise quality which forbids it to penetrate or in that the mere coexistence of too many qualities in Matter [constitutes density and so] produces the same inhibition.

If, then, what we call a dense body is so by reason of the presence of many qualities, that plenitude of qualities will be the cause [of the inhibition].

If on the other hand density is itself a quality like what they call corporeity, then the cause will be that particular quality.

This would mean that the qualities of two substances do not bring about the mixing by merely being qualities but by being apt to mixture; nor does Matter refuse to enter into a mixing as Matter but as being associated with a quality repugnant to mixture; and this all the more since it has no magnitude of its own but only does not reject magnitude.

3. We have thus covered our main ground, but since corporeity has been mentioned, we must consider its nature: is it the conjunction of all the qualities or is it an Idea, or Reason-Principle, whose presence in Matter constitutes a body?

Now if body is the compound, the thing made up of all the required qualities plus Matter, then corporeity is nothing more than their conjunction.

And if it is a Reason-Principle, one whose incoming constitutes the body, then clearly this Principle contains embraced within itself all the qualities. If this Reason-Principle is to be no mere principle of definition exhibiting the nature of a thing but a veritable Reason constituting the thing, then it cannot itself contain Matter but must encircle Matter, and by being present to Matter elaborate the body: thus the body will be Matter associated with an indwelling Reason-Principle which will be in itself immaterial, pure

Idea, even though irremoveably attached to the body. It is not to be confounded with that other Principle in man- treated elsewhere- which dwells in the Intellectual World by right of being itself an Intellectual Principle.

EIGHTH TRACTATE.

WHY DISTANT OBJECTS APPEAR SMALL.

1. Seen from a distance, objects appear reduced and close together, however far apart they be: within easy range, their sizes and the distances that separate them are observed correctly.

Distant objects show in this reduction because they must be drawn together for vision and the light must be concentrated to suit the size of the pupil; besides, as we are placed farther and farther away from the material mass under observation, it is more and more the bare form that reaches us, stripped, so to speak, of magnitude as of all other quality.

Or it may be that we appreciate the magnitude of an object by observing the salience and recession of its several parts, so that to perceive its true size we must have it close at hand.

Or again, it may be that magnitude is known incidentally [as a deduction] from the observation of colour. With an object at hand we know how much space is covered by the colour; at a distance, only that something is coloured, for the parts, quantitatively distinct among themselves, do not give us the precise knowledge of that quantity, the colours themselves reaching us only in a blurred impression.

What wonder, then, if size be like sound- reduced when the form reaches us but faintly- for in sound the hearing is concerned only about the form; magnitude is not discerned except incidentally.

Well, in hearing magnitude is known incidentally; but how? Touch conveys a direct impression of a visible object; what gives us the same direct impression of an object of hearing?

The magnitude of a sound is known not by actual quantity but by degree of impact, by intensity- and this in no indirect knowledge; the ear appreciates a certain degree of force, exactly as the palate perceives by no indirect knowledge, a certain degree of sweetness. But the true magnitude of a sound is its extension; this the hearing may define to itself incidentally by deduction from the degree of intensity but not to the point of precision. The intensity is merely the definite effect at a particular spot; the magnitude is a matter of totality, the sum of space occupied.

Still the colours seen from a distance are faint; but they are not small as the masses are.

True; but there is the common fact of diminution. There is colour with its diminution, faintness; there is magnitude with its diminution, smallness; and magnitude follows colour diminishing stage by stage with it.

But, the phenomenon is more easily explained by the example of things of wide variety. Take mountains dotted with houses, woods and other land-marks; the observation of each detail gives us the means of calculating, by the single objects noted, the total extent covered: but, where no such detail of form reaches us, our vision, which deals with detail, has not the means towards the knowledge of the whole by measurement of any one clearly discerned magnitude. This applies even to objects of vision close at hand: where there is variety and the eye sweeps over all at one glance so that the forms are not all caught, the total appears the less in proportion to the detail which has escaped the eye; observe each single point and then you can estimate the volume precisely. Again, magnitudes of one colour and unbroken form trick the sense of quantity: the vision can no longer estimate by the particular; it slips away, not finding the stand-by of the difference between part and part.

It was the detail that prevented a near object deceiving our sense of magnitude: in the case of the distant object, because the eye does not pass stage by stage through the stretch of intervening space so as to note its forms, therefore it cannot report the magnitude of that space.

2. The explanation by lesser angle of vision has been elsewhere dismissed; one point, however, we may urge here.

Those attributing the reduced appearance to the lesser angle occupied allow by their very theory that the unoccupied portion of the eye still sees something beyond or something quite apart from the object of vision, if only air-space.

Now consider some very large object of vision, that mountain for example. No part of the eye is unoccupied; the mountain adequately fills it so that it can take in nothing beyond, for the mountain as seen either corresponds exactly to the eye-space or stretches away out of range to right and to left. How does the explanation by lesser angle of vision hold good in this case, where the object still appears smaller, far, than it is and yet occupies the eye entire?

Or look up to the sky and no hesitation can remain. Of course we cannot take in the entire hemisphere at one glance; the eye directed to it could not cover so vast an expanse. But suppose the possibility: the entire eye, then, embraces the hemisphere entire; but the expanse of the heavens is far greater than it appears; how can its appearing far less than it is be explained by a lessening of the angle of vision?

NINTH TRACTATE.

AGAINST THOSE THAT AFFIRM THE CREATOR OF THE KOSMOS AND

THE KOSMOS ITSELF TO BE EVIL: [GENERALLY QUOTED

AS "AGAINST THE GNOSTICS"].

1. We have seen elsewhere that the Good, the Principle, is simplex, and, correspondingly, primal- for the secondary can never be simplex- that it contains nothing: that it is an integral Unity.

Now the same Nature belongs to the Principle we know as The One. just as the goodness of The Good is essential and not the outgrowth of some prior substance so the Unity of The One is its essential.

Therefore:

When we speak of The One and when we speak of The Good we must recognize an Identical Nature; we must affirm that they are the same- not, it is true, as venturing any predication with regard to that [unknowable] Hypostasis but simply as indicating it to ourselves in the best terms we find.

Even in calling it "The First" we mean no more than to express that it is the most absolutely simplex: it is the Self-Sufficing only in the sense that it is not of that compound nature which would make it dependent upon any constituent; it is "the Self-Contained" because everything contained in something alien must also exist by that alien.

Deriving, then, from nothing alien, entering into nothing alien, in no way a made-up thing, there can be nothing above it.

We need not, then, go seeking any other Principles; this- the One and the Good- is our First; next to it follows the Intellectual Principle, the Primal Thinker; and upon this follows Soul. Such is the order in nature. The Intellectual Realm allows no more than these and no fewer.

Those who hold to fewer Principles must hold the identity of either Intellectual-Principle and Soul or of Intellectual-Principle and The First; but we have abundantly shown that these are distinct.

It remains for us to consider whether there are more than these Three.

Now what other [Divine] Kinds could there be? No Principles of the universe could be found at once simpler and more transcendent than this whose existence we have affirmed and described.

They will scarcely urge upon us the doubling of the Principle in Act by a Principle in Potentiality. It is absurd to seek such a plurality by distinguishing between potentiality and actuality in the case of immaterial beings whose existence is in Act- even in lower forms no such division can be made and we cannot conceive a duality in the Intellectual-Principle, one phase in some vague calm, another all astir. Under what form

can we think of repose in the Intellectual Principle as contrasted with its movement or utterance? What would the quiescence of the one phase be as against the energy of the others?

No: the Intellectual-Principle is continuously itself, unchangeably constituted in stable Act. With movement- towards it or within it- we are in the realm of the Soul's operation: such act is a Reason-Principle emanating from it and entering into Soul, thus made an Intellectual Soul, but in no sense creating an intermediate Principle to stand between the two.

Nor are we warranted in affirming a plurality of Intellectual Principles on the ground that there is one that knows and thinks and another knowing that it knows and thinks. For whatever distinction be possible in the Divine between its Intellectual Act and its Consciousness of that Act, still all must be one projection not unaware of its own operation: it would be absurd to imagine any such unconsciousness in the Authentic Intelligence; the knowing principle must be one and the selfsame with that which knows of the knowing.

The contrary supposition would give us two beings, one that merely knows, and another separate being that knows of the act of knowing.

If we are answered that the distinction is merely a process of our thought, then, at once, the theory of a plurality in the Divine Hypostasis is abandoned: further, the question is opened whether our thought can entertain a knowing principle so narrowed to its knowing as not to know that it knows- a limitation which would be charged as imbecility even in ourselves, who if but of very ordinary moral force are always master of our emotions and mental processes.

No: The Divine Mind in its mentation thinks itself; the object of the thought is nothing external: Thinker and Thought are one; therefore in its thinking and knowing it possesses itself, observes itself and sees itself not as something unconscious but as knowing: in this Primal Knowing it must include, as one and the same Act, the knowledge of the knowing; and even the logical distinction mentioned above cannot be made in the case of the Divine; the very eternity of its self-thinking precludes any such separation between that intellective act and the consciousness of the act.

The absurdity becomes still more blatant if we introduce yet a further distinction- after that which affirms the knowledge of the knowing, a third distinction affirming the knowing of the knowledge of the knowing: yet there is no reason against carrying on the division for ever and ever.

To increase the Primals by making the Supreme Mind engender the Reason-Principle, and this again engender in the Soul a distinct power to act as mediator between Soul and the Supreme Mind, this is to deny intellection to the Soul, which would no longer derive its Reason from the Intellectual-Principle but from an intermediate: the Soul then would possess not the Reason-Principle but an image of it: the Soul could not know the Intellectual-Principle; it could have no intellection.

2. Therefore we must affirm no more than these three Primals: we are not to introduce superfluous distinctions which their nature rejects. We are to proclaim one Intellectual-Principle unchangeably the same, in no way subject to decline, acting in imitation, as true as its nature allows, of the Father.

And as to our own Soul we are to hold that it stands, in part, always in the presence of The Divine Beings, while in part it is concerned with the things of this sphere and in part occupies a middle ground. It is one nature in graded powers; and sometimes the Soul in its entirety is borne along by the loftiest in itself and in the Authentic Existent; sometimes, the less noble part is dragged down and drags the mid-soul with it, though the law is that the Soul may never succumb entire.

The Soul's disaster falls upon it when it ceases to dwell in the perfect Beauty- the appropriate dwelling-place of that Soul which is no part and of which we too are no part- thence to pour forth into the frame of the All whatsoever the All can hold of good and beauty. There that Soul rests, free from all solicitude, not ruling by plan or policy, not redressing, but establishing order by the marvellous efficacy of its contemplation of the things above it.

For the measure of its absorption in that vision is the measure of its grace and power, and what it draws from this contemplation it communicates to the lower sphere, illuminated and illuminating always.

3. Ever illuminated, receiving light unfailing, the All-Soul imparts it to the entire series of later Being which by this light is sustained and fostered and endowed with the fullest measure of life that each can absorb. It may be compared with a central fire warming every receptive body within range.

Our fire, however, is a thing of limited scope: given powers that have no limitation and are never cut off from the Authentic Existences, how imagine anything existing and yet failing to receive from them?

It is of the essence of things that each gives of its being to another: without this communication, The Good would not be Good, nor the Intellectual-Principle an Intellective Principle, nor would Soul itself be what it is: the law is, "some life after the Primal Life, a second where there is a first; all linked in one unbroken chain; all eternal; divergent types being engendered only in the sense of being secondary."

In other words, things commonly described as generated have never known a beginning: all has been and will be. Nor can anything disappear unless where a later form is possible: without such a future there can be no dissolution.

If we are told that there is always Matter as a possible term, we ask why then should not Matter itself come to nothingness. If we are told it may, then we ask why it should ever have been generated. If the answer comes that it had its necessary place as the ultimate of the series, we return that the necessity still holds.

With Matter left aside as wholly isolated, the Divine Beings are not everywhere but in some bounded place, walled off, so to speak; if that is not possible, Matter itself must receive the Divine light [and so cannot be annihilated].

4. To those who assert that creation is the work of the Soul after the failing of its wings, we answer that no such disgrace could overtake the Soul of the All. If they tell us of its falling, they must tell us also what caused the fall. And when did it take place? If from eternity, then the Soul must be essentially a fallen thing: if at some one moment, why not before that?

We assert its creative act to be a proof not of decline but rather of its steadfast hold. Its decline could consist only in its forgetting the Divine: but if it forgot, how could it create? Whence does it create but from the things it knew in the Divine? If it creates from the memory of that vision, it never fell. Even supposing it to be in some dim intermediate state, it need not be supposed more likely to decline: any inclination would be towards its Prior, in an effort to the clearer vision. If any memory at all remained, what other desire could it have than to retrace the way?

What could it have been planning to gain by world-creating? Glory? That would be absurd- a motive borrowed from the sculptors of our earth.

Finally, if the Soul created by policy and not by sheer need of its nature, by being characteristically the creative power- how explain the making of this universe?

And when will it destroy the work? If it repents of its work, what is it waiting for? If it has not yet repented, then it will never repent: it must be already accustomed to the world, must be growing more tender towards it with the passing of time.

Can it be waiting for certain souls still here? Long since would these have ceased returning for such re-birth, having known in former life the evils of this sphere; long since would they have foreborne to come.

Nor may we grant that this world is of unhappy origin because there are many jarring things in it. Such a judgement would rate it too high, treating it as the same with the Intelligible Realm and not merely its reflection.

And yet- what reflection of that world could be conceived more beautiful than this of ours? What fire could be a nobler reflection of the fire there than the fire we know here? Or what other earth than this could have been modelled after that earth? And what globe more minutely perfect than this, or more admirably ordered in its course could have been conceived in the image of the self-centred circling of the World of Intelligibles? And for a sun figuring the Divine sphere, if it is to be more splendid than the sun visible to us, what a sun it must be.

5. Still more unreasonably:

There are men, bound to human bodies and subject to desire, grief, anger, who think so generously of their own faculty that they declare themselves in contact with the Intelligible World, but deny that the sun possesses a similar faculty less subject to influence, to disorder, to change; they deny that it is any wiser than we, the late born, hindered by so many cheats on the way towards truth.

Their own soul, the soul of the least of mankind, they declare deathless, divine; but the entire heavens and the stars within the heavens have had no communion with the Immortal Principle, though these are far purer and lovelier than their own souls- yet they are not blind to the order, the shapely pattern, the discipline prevailing in the heavens, since they are the loudest in complaint of the disorder that troubles our earth. We are to imagine the deathless Soul choosing of design the less worthy place, and preferring to abandon the nobler to the Soul that is to die.

Equally unreasonable is their introduction of that other Soul which they piece together from the elements.

How could any form or degree of life come about by a blend of the elements? Their conjunction could produce only a warm or cold or an intermediate substance, something dry or wet or intermediate.

Besides, how could such a soul be a bond holding the four elements together when it is a later thing and rises from them? And this element- soul is described as possessing consciousness and will and the rest- what can we think?

Furthermore, these teachers, in their contempt for this creation and this earth, proclaim that another earth has been made for them into which they are to enter when they depart. Now this new earth is the Reason-Form [the Logos] of our world. Why should they desire to live in the archetype of a world abhorrent to them?

Then again, what is the origin of that pattern world? It would appear, from the theory, that the Maker had already declined towards the things of this sphere before that pattern came into being.

Now let us suppose the Maker craving to construct such an Intermediate World- though what motive could He have?- in addition to the Intellectual world which He eternally possesses. If He made the mid-world first, what end was it to serve?

To be a dwelling-place for Souls?

How then did they ever fall from it? It exists in vain.

If He made it later than this world- abstracting the formal-idea of this world and leaving the Matter out- the Souls that have come to know that intermediate sphere would have experienced enough to keep them from entering this. If the meaning is simply that Souls exhibit the Ideal-Form of the Universe, what is there distinctive in the teaching?

6. And, what are we to think of the new forms of being they introduce- their “Exiles” and “Impressions” and “Repentings”?

If all comes to states of the Soul- “Repentance” when it has undergone a change of purpose; “Impressions” when it contemplates not the Authentic Existences but their simulacra- there is nothing here but a jargon invented to make a case for their school: all this terminology is piled up only to conceal their debt to the ancient Greek philosophy which taught, clearly and without bombast, the ascent from the cave and the gradual advance of souls to a truer and truer vision.

For, in sum, a part of their doctrine comes from Plato; all the novelties through which they seek to establish a philosophy of their own have been picked up outside of the truth.

From Plato come their punishments, their rivers of the underworld and the changing from body to body; as for the plurality they assert in the Intellectual Realm- the Authentic Existent, the Intellectual-Principle, the Second Creator and the Soul- all this is taken over from the Timaeus, where we read:

“As many Ideal-Forms as the Divine Mind beheld dwelling within the Veritably Living Being, so many the Maker resolved should be contained in this All.”

Misunderstanding their text, they conceived one Mind passively including within itself all that has being, another mind, a distinct existence, having vision, and a third planning the Universe- though often they substitute Soul for this planning Mind as the creating Principle- and they think that this third being is the Creator according to Plato.

They are in fact quite outside of the truth in their identification of the Creator.

In every way they misrepresent Plato's theory as to the method of creation as in many other respects they dishonour his teaching: they, we are to understand, have penetrated the Intellectual Nature, while Plato and all those other illustrious teachers have failed.

They hope to get the credit of minute and exact identification by setting up a plurality of intellectual Essences; but in reality this multiplication lowers the Intellectual Nature to the level of the Sense-Kind: their true course is to seek to reduce number to the least possible in the Supreme, simply referring all things to the Second Hypostasis- which is all that exists as it is Primal Intellect and Reality and is the only thing that is good except only for the first Nature- and to recognize Soul as the third Principle, accounting for the difference among souls merely by diversity of experience and character. Instead of insulting those venerable teachers they should receive their doctrine with the respect due to the older thought and honour all that noble system- an immortal soul, an Intellectual and Intelligible Realm, the Supreme God, the Soul's need of emancipation from all intercourse with the body, the fact of separation from it, the escape from the world of process to the world of essential-being. These doctrines, all emphatically asserted by Plato, they do well to adopt: where they differ, they are at full liberty to speak their minds, but not to procure assent for their own theories by flaying and

flouting the Greeks: where they have a divergent theory to maintain they must establish it by its own merits, declaring their own opinions with courtesy and with philosophical method and stating the controverted opinion fairly; they must point their minds towards the truth and not hunt fame by insult, reviling and seeking in their own persons to replace men honoured by the fine intelligences of ages past.

As a matter of fact the ancient doctrine of the Divine Essences was far the sounder and more instructed, and must be accepted by all not caught in the delusions that beset humanity: it is easy also to identify what has been conveyed in these later times from the ancients with incongruous novelties- how for example, where they must set up a contradictory doctrine, they introduce a medley of generation and destruction, how they cavil at the Universe, how they make the Soul blameable for the association with body, how they revile the Administrator of this All, how they ascribe to the Creator, identified with the Soul, the character and experiences appropriate to partial beings.

7. That this world has neither beginning nor end but exists for ever as long as the Supreme stands is certainly no novel teaching. And before this school rose it had been urged that commerce with the body is no gain to a Soul.

But to treat the human Soul as a fair presentment of the Soul of the Universe is like picking out potters and blacksmiths and making them warrant for discrediting an entire well-ordered city.

We must recognize how different is the governance exercised by the All-Soul; the relation is not the same: it is not in fetters. Among the very great number of differences it should not have been overlooked that the We [the human Soul] lies under fetter; and this in a second limitation, for the Body-Kind, already fettered within the All-Soul, imprisons all that it grasps.

But the Soul of the Universe cannot be in bond to what itself has bound: it is sovereign and therefore immune of the lower things, over which we on the contrary are not masters. That in it which is directed to the Divine and Transcendent is ever unmingled, knows no encumbering; that in it which imparts life to the body admits nothing bodily to itself. It is the general fact that an inset [as the Body], necessarily shares the conditions of its containing principle [as the Soul], and does not communicate its own conditions where that principle has an independent life: thus a graft will die if the stock dies, but the stock will live on by its proper life though the graft wither. The fire within your own self may be quenched, but the thing, fire, will exist still; and if fire itself were annihilated that would make no difference to the Soul, the Soul in the Supreme, but only to the plan of the material world; and if the other elements sufficed to maintain a Kosmos, the Soul in the Supreme would be unconcerned.

The constitution of the All is very different from that of the single, separate forms of life: there, the established rule commanding to permanence is sovereign; here things are like deserters kept to their own place and duty by a double bond; there is no outlet from the All, and therefore no need of restraining or of driving errants back to bounds: all remains where from the beginning the Soul's nature appointed.

The natural movement within the plan will be injurious to anything whose natural tendency it opposes: one group will sweep bravely onward with the great total to which it is adapted; the others, not able to comply with the larger order, are destroyed. A great choral is moving to its concerted plan; midway in the march, a tortoise is intercepted; unable to get away from the choral line it is trampled under foot; but if it could only range itself within the greater movement it too would suffer nothing.

8. To ask why the Soul has created the Kosmos, is to ask why there is a Soul and why a Creator creates. The question, also, implies a beginning in the eternal and, further, represents creation as the act of a changeful Being who turns from this to that.

Those that so think must be instructed- if they would but bear with correction- in the nature of the Supernals, and brought to desist from that blasphemy of majestic powers which comes so easily to them, where all should be reverent scruple.

Even in the administration of the Universe there is no ground for such attack, for it affords manifest proof of the greatness of the Intellectual Kind.

This All that has emerged into life is no amorphous structure- like those lesser forms within it which are born night and day out of the lavishness of its vitality- the Universe is a life organized, effective, complex, all-comprehensive, displaying an unfathomable wisdom. How, then, can anyone deny that it is a clear image, beautifully formed, of the Intellectual Divinities? No doubt it is copy, not original; but that is its very nature; it cannot be at once symbol and reality. But to say that it is an inadequate copy is false; nothing has been left out which a beautiful representation within the physical order could include.

Such a reproduction there must necessarily be- though not by deliberation and contrivance- for the Intellectual could not be the last of things, but must have a double Act, one within itself and one outgoing; there must, then, be something later than the Divine; for only the thing with which all power ends fails to pass downwards something of itself. In the Supreme there flourishes a marvellous vigour, and therefore it produces.

Since there is no Universe nobler than this, is it not clear what this must be? A representation carrying down the features of the Intellectual Realm is necessary; there is no other Kosmos than this; therefore this is such a representation.

This earth of ours is full of varied life-forms and of immortal beings; to the very heavens it is crowded. And the stars, those of the upper and the under spheres, moving in their ordered path, fellow-travellers with the universe, how can they be less than gods? Surely they must be morally good: what could prevent them? All that occasions vice here below is unknown there evil of body, perturbed and perturbing.

Knowledge, too; in their unbroken peace, what hinders them from the intellectual grasp of the God-Head and the Intellectual Gods? What can be imagined to give us a wisdom higher than belongs to the Supernals? Could anyone, not fallen to utter folly, bear with

such an idea?

Admitting that human Souls have descended under constraint of the All-Soul, are we to think the constrained the nobler? Among Souls, what commands must be higher than what obeys. And if the coming was unconstrained, why find fault with a world you have chosen and can quit if you dislike it?

And further, if the order of this Universe is such that we are able, within it, to practise wisdom and to live our earthly course by the Supernal, does not that prove it a dependency of the Divine?

9. Wealth and poverty, and all inequalities of that order, are made ground of complaint. But this is to ignore that the Sage demands no equality in such matters: he cannot think that to own many things is to be richer or that the powerful have the better of the simple; he leaves all such preoccupations to another kind of man. He has learned that life on earth has two distinct forms, the way of the Sage and the way of the mass, the Sage intent upon the sublimest, upon the realm above, while those of the more strictly human type fall, again, under two classes, the one reminiscent of virtue and therefore not without touch with good, the other mere populace, serving to provide necessities to the better sort.

But what of murder? What of the feebleness that brings men under slavery to the passions?

Is it any wonder that there should be failing and error, not in the highest, the intellectual, Principle but in Souls that are like undeveloped children? And is not life justified even so if it is a training ground with its victors and its vanquished?

You are wronged; need that trouble an immortal? You are put to death; you have attained your desire. And from the moment your citizenship of the world becomes irksome you are not bound to it.

Our adversaries do not deny that even here there is a system of law and penalty: and surely we cannot in justice blame a dominion which awards to every one his due, where virtue has its honour, and vice comes to its fitting shame, in which there are not merely representations of the gods, but the gods themselves, watchers from above, and- as we read- easily rebutting human reproaches, since they lead all things in order from a beginning to an end, allotting to each human being, as life follows life, a fortune shaped to all that has preceded- the destiny which, to those that do not penetrate it, becomes the matter of boorish insolence upon things divine.

A man's one task is to strive towards making himself perfect- though not in the idea- really fatal to perfection- that to be perfect is possible to himself alone.

We must recognize that other men have attained the heights of goodness; we must admit the goodness of the celestial spirits, and above all of the gods- those whose presence is here but their contemplation in the Supreme, and loftiest of them, the lord of

this All, the most blessed Soul. Rising still higher, we hymn the divinities of the Intellectual Sphere, and, above all these, the mighty King of that dominion, whose majesty is made patent in the very multitude of the gods.

It is not by crushing the divine unto a unity but by displaying its exuberance- as the Supreme himself has displayed it- that we show knowledge of the might of God, who, abidingly what He is, yet creates that multitude, all dependent on Him, existing by Him and from Him.

This Universe, too, exists by Him and looks to Him- the Universe as a whole and every God within it- and tells of Him to men, all alike revealing the plan and will of the Supreme.

These, in the nature of things, cannot be what He is, but that does not justify you in contempt of them, in pushing yourself forward as not inferior to them.

The more perfect the man, the more compliant he is, even towards his fellows; we must temper our importance, not thrusting insolently beyond what our nature warrants; we must allow other beings, also, their place in the presence of the Godhead; we may not set ourselves alone next after the First in a dream-flight which deprives us of our power of attaining identity with the Godhead in the measure possible to the human Soul, that is to say, to the point of likeness to which the Intellectual-Principle leads us; to exalt ourselves above the Intellectual-Principle is to fall from it.

Yet imbeciles are found to accept such teaching at the mere sound of the words "You, yourself, are to be nobler than all else, nobler than men, nobler than even gods." Human audacity is very great: a man once modest, restrained and simple hears, "You, yourself, are the child of God; those men whom you used to venerate, those beings whose worship they inherit from antiquity, none of these are His children; you without lifting a hand are nobler than the very heavens"; others take up the cry: the issue will be much as if in a crowd all equally ignorant of figures, one man were told that he stands a thousand cubic feet; he will naturally accept his thousand cubits even though the others present are said to measure only five cubits; he will merely tell himself that the thousand indicates a considerable figure.

Another point: God has care for you; how then can He be indifferent to the entire Universe in which you exist?

We may be told that He is too much occupied to look upon the Universe, and that it would not be right for Him to do so; yet, when He looks down and upon these people, is He not looking outside Himself and upon the Universe in which they exist? If He cannot look outside Himself so as to survey the Kosmos, then neither does He look upon them.

But they have no need of Him?

The Universe has need of Him, and He knows its ordering and its indwellers and how far they belong to it and how far to the Supreme, and which of the men upon it are

friends of God, mildly acquiescing with the Kosmic dispensation when in the total course of things some pain must be brought to them- for we are to look not to the single will of any man but to the universe entire, regarding every one according to worth but not stopping for such things where all that may is hastening onward.

Not one only kind of being is bent upon this quest, which brings bliss to whatsoever achieves, and earns for the others a future destiny in accord with their power. No man, therefore, may flatter himself that he alone is competent; a pretension is not a possession; many boast though fully conscious of their lack and many imagine themselves to possess what was never theirs and even to be alone in possessing what they alone of men never had.

10. Under detailed investigation, many other tenets of this school- indeed we might say all- could be corrected with an abundance of proof. But I am withheld by regard for some of our own friends who fell in with this doctrine before joining our circle and, strangely, still cling to it.

The school, no doubt, is free-spoken enough- whether in the set purpose of giving its opinions a plausible colour of verity or in honest belief- but we are addressing here our own acquaintances, not those people with whom we could make no way. We have spoken in the hope of preventing our friends from being perturbed by a party which brings, not proof- how could it?- but arbitrary, tyrannical assertion; another style of address would be applicable to such as have the audacity to flout the noble and true doctrines of the august teachers of antiquity.

That method we will not apply; anyone that has fully grasped the preceding discussion will know how to meet every point in the system.

Only one other tenet of theirs will be mentioned before passing the matter; it is one which surpasses all the rest in sheer folly, if that is the word.

They first maintain that the Soul and a certain "Wisdom" [Sophia] declined and entered this lower sphere though they leave us in doubt of whether the movement originated in Soul or in this Sophia of theirs, or whether the two are the same to them- then they tell us that the other Souls came down in the descent and that these members of Sophia took to themselves bodies, human bodies, for example.

Yet in the same breath, that very Soul which was the occasion of descent to the others is declared not to have descended. "It knew no decline," but merely illuminated the darkness in such a way that an image of it was formed upon the Matter. Then, they shape an image of that image somewhere below- through the medium of Matter or of Materiality or whatever else of many names they choose to give it in their frequent change of terms, invented to darken their doctrine- and so they bring into being what they call the Creator or Demiurge, then this lower is severed from his Mother [Sophia] and becomes the author of the Kosmos down to the latest of the succession of images constituting it.

Such is the blasphemy of one of their writers.

11. Now, in the first place, if the Soul has not actually come down but has illuminated the darkness, how can it truly be said to have declined? The outflow from it of something in the nature of light does not justify the assertion of its decline; for that, it must make an actual movement towards the object lying in the lower realm and illuminate it by contact.

If, on the other hand, the Soul keeps to its own place and illuminates the lower without directing any act towards that end, why should it alone be the illuminant? Why should not the Kosmos draw light also from the yet greater powers contained in the total of existence?

Again, if the Soul possesses the plan of a Universe, and by virtue of this plan illuminates it, why do not that illumination and the creating of the world take place simultaneously? Why must the Soul wait till the representations of the plan be made actual?

Then again this Plan- the "Far Country" of their terminology- brought into being, as they hold, by the greater powers, could not have been the occasion of decline to the creators.

Further, how explain that under this illumination the Matter of the Kosmos produces images of the order of Soul instead of mere bodily-nature? An image of Soul could not demand darkness or Matter, but wherever formed it would exhibit the character of the producing element and remain in close union with it.

Next, is this image a real-being, or, as they say, an Intellection?

If it is a reality, in what way does it differ from its original? By being a distinct form of the Soul? But then, since the original is the reasoning Soul, this secondary form must be the vegetative and generative Soul; and then, what becomes of the theory that it is produced for glory's sake, what becomes of the creation in arrogance and self-assertion? The theory puts an end also to creation by representation and, still more decidedly, to any thinking in the act; and what need is left for a creator creating by way of Matter and Image?

If it is an Intellection, then we ask first "What justifies the name?" and next, "How does anything come into being unless the Soul give this Intellection creative power and how, after all, can creative power reside in a created thing?" Are we to be told that it is a question of a first Image followed by a second?

But this is quite arbitrary.

And why is fire the first creation?

12. And how does this image set to its task immediately after it comes into being?

By memory of what it has seen?

But it was utterly non-existent, it could have no vision, either it or the Mother they bestow upon it.

Another difficulty: These people come upon earth not as Soul-Images but as veritable Souls; yet, by great stress and strain, one or two of them are able to stir beyond the limits of the world, and when they do attain Reminiscence barely carry with them some slight recollection of the Sphere they once knew: on the other hand, this Image, a new-comer into being, is able, they tell us- as also is its Mother- to form at least some dim representation of the celestial world. It is an Image, stamped in Matter, yet it not merely has the conception of the Supreme and adopts from that world the plan of this, but knows what elements serve the purpose. How, for instance, did it come to make fire before anything else? What made it judge fire a better first than some other object?

Again, if it created the fire of the Universe by thinking of fire, why did it not make the Universe at a stroke by thinking of the Universe? It must have conceived the product complete from the first; the constituent elements would be embraced in that general conception.

The creation must have been in all respects more according to the way of Nature than to that of the arts- for the arts are of later origin than Nature and the Universe, and even at the present stage the partial things brought into being by the natural Kinds do not follow any such order- first fire, then the several other elements, then the various blends of these- on the contrary the living organism entire is encompassed and rounded off within the uterine germ. Why should not the material of the Universe be similarly embraced in a Kosmic Type in which earth, fire and the rest would be included? We can only suppose that these people themselves, acting by their more authentic Soul, would have produced the world by such a process, but that the Creator had not wit to do so.

And yet to conceive the vast span of the Heavens- to be great in that degree- to devise the obliquity of the Zodiac and the circling path of all the celestial bodies beneath it, and this earth of ours- and all in such a way that reason can be given for the plan- this could never be the work of an Image; it tells of that Power [the All-Soul] next to the very Highest Beings.

Against their will, they themselves admit this: their "outshining upon the darkness," if the doctrine is sifted, makes it impossible to deny the true origins of the Kosmos.

Why should this down-shining take place unless such a process belonged to a universal law?

Either the process is in the order of Nature or against that order. If it is in the nature of things, it must have taken place from eternity; if it is against the nature of things, then the breach of natural right exists in the Supreme also; evil antedates this world; the cause of evil is not the world; on the contrary the Supreme is the evil to us; instead of the Soul's harm coming from this sphere, we have this Sphere harmed by the Soul.

In fine, the theory amounts to making the world one of the Primals, and with it the Matter from which it emerges.

The Soul that declined, they tell us, saw and illuminated the already existent Darkness. Now whence came that Darkness?

If they tell us that the Soul created the Darkness by its Decline, then, obviously, there was nowhere for the Soul to decline to; the cause of the decline was not the Darkness but the very nature of the Soul. The theory, therefore, refers the entire process to pre-existing compulsions: the guilt inheres in the Primal Beings.

13. Those, then, that censure the constitution of the Kosmos do not understand what they are doing or where this audacity leads them. They do not understand that there is a successive order of Primals, Secondaries, Tertiaries and so on continuously to the Ultimates; that nothing is to be blamed for being inferior to the First; that we can but accept, meekly, the constitution of the total, and make our best way towards the Primals, withdrawing from the tragic spectacle, as they see it, of the Kosmic spheres- which in reality are all suave graciousness.

And what, after all, is there so terrible in these Spheres with which it is sought to frighten people unaccustomed to thinking, never trained in an instructive and coherent gnosis?

Even the fact that their material frame is of fire does not make them dreadful; their Movements are in keeping with the All and with the Earth: but what we must consider in them is the Soul, that on which these people base their own title to honour.

And, yet, again, their material frames are pre-eminent in vastness and beauty, as they cooperate in act and in influence with the entire order of Nature, and can never cease to exist as long as the Primals stand; they enter into the completion of the All of which they are major Parts.

If men rank highly among other living Beings, much more do these, whose office in the All is not to play the tyrant but to serve towards beauty and order. The action attributed to them must be understood as a foretelling of coming events, while the causing of all the variety is due, in part to diverse destinies- for there cannot be one lot for the entire body of men- in part to the birth moment, in part to wide divergencies of place, in part to states of the Souls.

Once more, we have no right to ask that all men shall be good, or to rush into censure because such universal virtue is not possible: this would be repeating the error of confusing our sphere with the Supreme and treating evil as a nearly negligible failure in wisdom- as good lessened and dwindling continuously, a continuous fading out; it would be like calling the Nature-Principle evil because it is not Sense-Perception and the thing of sense evil for not being a Reason-Principle. If evil is no more than that, we will be obliged to admit evil in the Supreme also, for there, too, Soul is less exalted than the Intellectual-Principle, and That too has its Superior.

14. In yet another way they infringe still more gravely upon the inviolability of the Supreme.

In the sacred formulas they inscribe, purporting to address the Supernal Beings- not merely the Soul but even the Transcendents- they are simply uttering spells and appeasements and evocations in the idea that these Powers will obey a call and be led about by a word from any of us who is in some degree trained to use the appropriate forms in the appropriate way- certain melodies, certain sounds, specially directed breathings, sibilant cries, and all else to which is ascribed magic potency upon the Supreme. Perhaps they would repudiate any such intention: still they must explain how these things act upon the unembodied: they do not see that the power they attribute to their own words is so much taken away from the majesty of the divine.

They tell us they can free themselves of diseases.

If they meant, by temperate living and an appropriate regime, they would be right and in accordance with all sound knowledge. But they assert diseases to be Spirit-Beings and boast of being able to expel them by formula: this pretension may enhance their importance with the crowd, gaping upon the powers of magicians; but they can never persuade the intelligent that disease arises otherwise than from such causes as overstrain, excess, deficiency, putrid decay; in a word, some variation whether from within or from without.

The nature of illness is indicated by its very cure. A motion, a medicine, the letting of blood, and the disease shifts down and away; sometimes scantiness of nourishment restores the system: presumably the Spiritual power gets hungry or is debilitated by the purge. Either this Spirit makes a hasty exit or it remains within. If it stays, how does the disease disappear, with the cause still present? If it quits the place, what has driven it out? Has anything happened to it? Are we to suppose it throve on the disease? In that case the disease existed as something distinct from the Spirit-Power. Then again, if it steps in where no cause of sickness exists, why should there be anything else but illness? If there must be such a cause, the Spirit is unnecessary: that cause is sufficient to produce that fever. As for the notion, that just when the cause presents itself, the watchful Spirit leaps to incorporate itself with it, this is simply amusing.

But the manner and motive of their teaching have been sufficiently exhibited; and this was the main purpose of the discussion here upon their Spirit-Powers. I leave it to yourselves to read the books and examine the rest of the doctrine: you will note all through how our form of philosophy inculcates simplicity of character and honest thinking in addition to all other good qualities, how it cultivates reverence and not arrogant self-assertion, how its boldness is balanced by reason, by careful proof, by cautious progression, by the utmost circumspection- and you will compare those other systems to one proceeding by this method. You will find that the tenets of their school have been huddled together under a very different plan: they do not deserve any further examination here.

15. There is, however, one matter which we must on no account overlook- the effect of these teachings upon the hearers led by them into despising the world and all that is in it.

There are two theories as to the attainment of the End of life. The one proposes pleasure, bodily pleasure, as the term; the other pronounces for good and virtue, the desire of which comes from God and moves, by ways to be studied elsewhere, towards God.

Epicurus denies a Providence and recommends pleasure and its enjoyment, all that is left to us: but the doctrine under discussion is still more wanton; it carps at Providence and the Lord of Providence; it scorns every law known to us; immemorial virtue and all restraint it makes into a laughing stock, lest any loveliness be seen on earth; it cuts at the root of all orderly living, and of the righteousness which, innate in the moral sense, is made perfect by thought and by self-discipline: all that would give us a noble human being is gone. What is left for them except where the pupil by his own character betters the teaching- comes to pleasure, self-seeking, the grudge of any share with one's fellows, the pursuit of advantage.

Their error is that they know nothing good here: all they care for is something else to which they will at some future time apply themselves: yet, this world, to those that have known it once, must be the starting-point of the pursuit: arrived here from out of the divine nature, they must inaugurate their effort by some earthly correction. The understanding of beauty is not given except to a nature scorning the delight of the body, and those that have no part in well-doing can make no step towards the Supernal.

This school, in fact, is convicted by its neglect of all mention of virtue: any discussion of such matters is missing utterly: we are not told what virtue is or under what different kinds it appears; there is no word of all the numerous and noble reflections upon it that have come down to us from the ancients; we do not learn what constitutes it or how it is acquired, how the Soul is tended, how it is cleaned. For to say "Look to God" is not helpful without some instruction as to what this looking imports: it might very well be said that one can "look" and still sacrifice no pleasure, still be the slave of impulse, repeating the word God but held in the grip of every passion and making no effort to master any. Virtue, advancing towards the Term and, linked with thought, occupying a Soul makes God manifest: God on the lips, without a good conduct of life, is a word.

16. On the other hand, to despise this Sphere, and the Gods within it or anything else that is lovely, is not the way to goodness.

Every evil-doer began by despising the Gods; and one not previously corrupt, taking to this contempt, even though in other respects not wholly bad, becomes an evil-doer by the very fact.

Besides, in this slighting of the Mundane Gods and the world, the honour they profess for the gods of the Intellectual Sphere becomes an inconsistency; Where we love, our hearts are warm also to the Kin of the beloved; we are not indifferent to the children of

our friend. Now every Soul is a child of that Father; but in the heavenly bodies there are Souls, intellectual, holy, much closer to the Supernal Beings than are ours; for how can this Kosmos be a thing cut off from That and how imagine the gods in it to stand apart?

But of this matter we have treated elsewhere: here we urge that where there is contempt for the Kin of the Supreme the knowledge of the Supreme itself is merely verbal.

What sort of piety can make Providence stop short of earthly concerns or set any limit whatsoever to it?

And what consistency is there in this school when they proceed to assert that Providence cares for them, though for them alone?

And is this Providence over them to be understood of their existence in that other world only or of their lives here as well? If in the other world, how came they to this? If in this world, why are they not already raised from it?

Again, how can they deny that the Lord of Providence is here? How else can He know either that they are here, or that in their sojourn here they have not forgotten Him and fallen away? And if He is aware of the goodness of some, He must know of the wickedness of others, to distinguish good from bad. That means that He is present to all, is, by whatever mode, within this Universe. The Universe, therefore, must be participant in Him.

If He is absent from the Universe, He is absent from yourselves, and you can have nothing to tell about Him or about the powers that come after Him.

But, allowing that a Providence reaches to you from the world beyond- making any concession to your liking- it remains none the less certain that this world holds from the Supernal and is not deserted and will not be: a Providence watching entire is even more likely than one over fragments only; and similarly, Participation is more perfect in the case of the All-Soul- as is shown, further, by the very existence of things and the wisdom manifest in their existence. Of those that advance these wild pretensions, who is so well ordered, so wise, as the Universe? The comparison is laughable, utterly out of place; to make it, except as a help towards truth, would be impiety.

The very question can be entertained by no intelligent being but only by one so blind, so utterly devoid of perception and thought, so far from any vision of the Intellectual Universe as not even to see this world of our own.

For who that truly perceives the harmony of the Intellectual Realm could fail, if he has any bent towards music, to answer to the harmony in sensible sounds? What geometrician or arithmetician could fail to take pleasure in the symmetries, correspondences and principles of order observed in visible things? Consider, even, the case of pictures: those seeing by the bodily sense the productions of the art of painting do not see the one thing in the one only way; they are deeply stirred by recognizing in

the objects depicted to the eyes the presentation of what lies in the idea, and so are called to recollection of the truth- the very experience out of which Love rises. Now, if the sight of Beauty excellently reproduced upon a face hurries the mind to that other Sphere, surely no one seeing the loveliness lavish in the world of sense- this vast orderliness, the Form which the stars even in their remoteness display- no one could be so dull-witted, so immoveable, as not to be carried by all this to recollection, and gripped by reverent awe in the thought of all this, so great, sprung from that greatness. Not to answer thus could only be to have neither fathomed this world nor had any vision of that other.

17. Perhaps the hate of this school for the corporeal is due to their reading of Plato who inveighs against body as a grave hindrance to Soul and pronounces the corporeal to be characteristically the inferior.

Then let them for the moment pass over the corporeal element in the Universe and study all that still remains.

They will think of the Intellectual Sphere which includes within itself the Ideal-Form realized in the Kosmos. They will think of the Souls, in their ordered rank, that produce incorporeal magnitude and lead the Intelligible out towards spatial extension, so that finally the thing of process becomes, by its magnitude, as adequate a representation as possible of the principle void of parts which is its model- the greatness of power there being translated here into greatness of bulk. Then whether they think of the Kosmic Sphere [the All-Soul] as already in movement under the guidance of that power of God which holds it through and through, beginning and middle and end, or whether they consider it as in rest and exercising as yet no outer governance: either approach will lead to a true appreciation of the Soul that conducts this Universe.

Now let them set body within it- not in the sense that Soul suffers any change but that, since "In the Gods there can be no grudging," it gives to its inferior all that any partial thing has strength to receive and at once their conception of the Kosmos must be revised; they cannot deny that the Soul of the Kosmos has exercised such a weight of power as to have brought the corporeal-principle, in itself unlovely, to partake of good and beauty to the utmost of its receptivity- and to a pitch which stirs Souls, beings of the divine order.

These people may no doubt say that they themselves feel no such stirring, and that they see no difference between beautiful and ugly forms of body; but, at that, they can make no distinction between the ugly and the beautiful in conduct; sciences can have no beauty; there can be none in thought; and none, therefore, in God. This world descends from the Firsts: if this world has no beauty, neither has its Source; springing thence, this world, too, must have its beautiful things. And while they proclaim their contempt for earthly beauty, they would do well to ignore that of youths and women so as not to be overcome by incontinence.

In fine, we must consider that their self-satisfaction could not turn upon a contempt for anything indisputably base; theirs is the perverse pride of despising what was once

admired.

We must always keep in mind that the beauty in a partial thing cannot be identical with that in a whole; nor can any several objects be as stately as the total.

And we must recognize, that, even in the world of sense and part, there are things of a loveliness comparable to that of the Celestials- forms whose beauty must fill us with veneration for their creator and convince us of their origin in the divine, forms which show how ineffable is the beauty of the Supreme since they cannot hold us but we must, though in all admiration, leave these for those. Further, wherever there is interior beauty, we may be sure that inner and outer correspond; where the interior is vile, all is brought low by that flaw in the dominants.

Nothing base within can be beautiful without- at least not with an authentic beauty, for there are examples of a good exterior not sprung from a beauty dominant within; people passing as handsome but essentially base have that, a spurious and superficial beauty: if anyone tells me he has seen people really fine-looking but interiorly vile, I can only deny it; we have here simply a false notion of personal beauty; unless, indeed, the inner vileness were an accident in a nature essentially fine; in this Sphere there are many obstacles to self-realization.

In any case the All is beautiful, and there can be no obstacle to its inner goodness: where the nature of a thing does not comport perfection from the beginning, there may be a failure in complete expression; there may even be a fall to vileness, but the All never knew a childlike immaturity; it never experienced a progress bringing novelty into it; it never had bodily growth: there was nowhere from whence it could take such increment; it was always the All-Container.

And even for its Soul no one could imagine any such a path of process: or, if this were conceded, certainly it could not be towards evil.

18. But perhaps this school will maintain that, while their teaching leads to a hate and utter abandonment of the body, ours binds the Soul down in it.

In other words: two people inhabit the one stately house; one of them declaims against its plan and against its Architect, but none the less maintains his residence in it; the other makes no complaint, asserts the entire competency of the Architect and waits cheerfully for the day when he may leave it, having no further need of a house: the malcontent imagines himself to be the wiser and to be the readier to leave because he has learned to repeat that the walls are of soulless stone and timber and that the place falls far short of a true home; he does not see that his only distinction is in not being able to bear with necessity assuming that his conduct, his grumbling, does not cover a secret admiration for the beauty of those same "stones." As long as we have bodies we must inhabit the dwellings prepared for us by our good sister the Soul in her vast power of labourless creation.

Or would this school reject the word Sister? They are willing to address the lowest of

men as brothers; are they capable of such raving as to disown the tie with the Sun and the powers of the Heavens and the very Soul of the Kosmos? Such kinship, it is true, is not for the vile; it may be asserted only of those that have become good and are no longer body but embodied Soul and of a quality to inhabit the body in a mode very closely resembling the indwelling. of the All-Soul in the universal frame. And this means continence, self-restraint, holding staunch against outside pleasure and against outer spectacle, allowing no hardship to disturb the mind. The All-Soul is immune from shock; there is nothing that can affect it: but we, in our passage here, must call on virtue in repelling these assaults, reduced for us from the beginning by a great conception of life, annulled by matured strength.

Attaining to something of this immunity, we begin to reproduce within ourselves the Soul of the vast All and of the heavenly bodies: when we are come to the very closest resemblance, all the effort of our fervid pursuit will be towards that goal to which they also tend; their contemplative vision becomes ours, prepared as we are, first by natural disposition and afterwards by all this training, for that state which is theirs by the Principle of their Being.

This school may lay claim to vision as a dignity reserved to themselves, but they are not any the nearer to vision by the claim- or by the boast that while the celestial powers, bound for ever to the ordering of the Heavens, can never stand outside the material universe, they themselves have their freedom in their death. This is a failure to grasp the very notion of "standing outside," a failure to appreciate the mode in which the All-Soul cares for the unensouled.

No: it is possible to go free of love for the body; to be clean-living, to disregard death; to know the Highest and aim at that other world; not to slander, as negligent in the quest, others who are able for it and faithful to it; and not to err with those that deny vital motion to the stars because to our sense they stand still- the error which in another form leads this school to deny outer vision to the Star-Nature, only because they do not see the Star-Soul in outer manifestation.

First Tractate

Fate 1. In the two orders of things- those whose existence is that of process and those in whom it is Authentic Being- there is a variety of possible relation to Cause.

Cause might conceivably underly all the entities in both orders or none in either. It might underly some, only, in each order, the others being causeless. It might, again, underly the Realm of Process universally while in the Realm of Authentic Existence some things were caused, others not, or all were causeless. Conceivably, on the other hand, the Authentic Existents are all caused while in the Realm of Process some things are caused and others not, or all are causeless.

Now, to begin with the Eternal Existents:

The Firsts among these, by the fact that they are Firsts, cannot be referred to outside Causes; but all such as depend upon those Firsts may be admitted to derive their Being from them.

And in all cases the Act may be referred to the Essence [as its cause], for their Essence consists, precisely, in giving forth an appropriate Act.

As for Things of Process- or for Eternal Existents whose Act is not eternally invariable- we must hold that these are due to Cause; Causelessness is quite inadmissible; we can make no place here for unwarranted "slantings," for sudden movement of bodies apart from any initiating power, for precipitate spurts in a soul with nothing to drive it into the new course of action. Such causelessness would bind the Soul under an even sterner compulsion, no longer master of itself, but at the mercy of movements apart from will and cause. Something willed- within itself or without- something desired, must lead it to action; without motive it can have no motion.

On the assumption that all happens by Cause, it is easy to discover the nearest determinants of any particular act or state and to trace it plainly to them.

The cause of a visit to the centre of affairs will be that one thinks it necessary to see some person or to receive a debt, or, in a word, that one has some definite motive or impulse confirmed by a judgement of expediency. Sometimes a condition may be referred to the arts, the recovery of health for instance to medical science and the doctor. Wealth has for its cause the discovery of a treasure or the receipt of a gift, or the earning of money by manual or intellectual labour. The child is traced to the father as its Cause and perhaps to a chain of favourable outside circumstances such as a particular diet or, more immediately, a special organic aptitude or a wife apt to childbirth.

And the general cause of all is Nature.

2. But to halt at these nearest determinants, not to be willing to penetrate deeper, indicates a sluggish mind, a dullness to all that calls us towards the primal and transcendent causes.

How comes it that the same surface causes produce different results? There is moonshine, and one man steals and the other does not: under the influence of exactly similar surroundings one man falls sick and the other keeps well; an identical set of operations makes one rich and leaves another poor. The differences amongst us in manners, in characters, in success, force us to go still further back.

Men therefore have never been able to rest at the surface causes.

One school postulates material principles, such as atoms; from the movement, from the collisions and combinations of these, it derives the existence and the mode of being of all particular phenomena, supposing that all depends upon how these atoms are agglomerated, how they act, how they are affected; our own impulses and states, even, are supposed to be determined by these principles.

Such teaching, then, obtrudes this compulsion, an atomic Anagke, even upon Real Being. Substitute, for the atoms, any other material entities as principles and the cause of all things, and at once Real Being becomes servile to the determination set up by them.

Others rise to the first-principle of all that exists and from it derive all they tell of a cause penetrating all things, not merely moving all but making each and everything; but they pose this as a fate and a supremely dominating cause; not merely all else that comes into being, but even our own thinking and thoughts would spring from its movement, just as the several members of an animal move not at their own choice but at the dictation of the leading principle which animal life presupposes.

Yet another school fastens on the universal Circuit as embracing all things and producing all by its motion and by the positions and mutual aspect of the planets and fixed stars in whose power of foretelling they find warrant for the belief that this Circuit is the universal determinant.

Finally, there are those that dwell on the interconnection of the causative forces and on

their linked descent- every later phenomenon following upon an earlier, one always leading back to others by which it arose and without which it could not be, and the latest always subservient to what went before them- but this is obviously to bring in fate by another path. This school may be fairly distinguished into two branches; a section which makes all depend upon some one principle and a section which ignores such a unity.

Of this last opinion we will have something to say, but for the moment we will deal with the former, taking the others in their turn.

3. "Atoms" or "elements"- it is in either case an absurdity, an impossibility, to hand over the universe and its contents to material entities, and out of the disorderly swirl thus occasioned to call order, reasoning, and the governing soul into being; but the atomic origin is, if we may use the phrase, the most impossible.

A good deal of truth has resulted from the discussion of this subject; but, even to admit such principles does not compel us to admit universal compulsion or any kind of "fate."

Suppose the atoms to exist:

These atoms are to move, one downwards- admitting a down and an up- another slant-wise, all at haphazard, in a confused conflict. Nothing here is orderly; order has not come into being, though the outcome, this Universe, when it achieves existence, is all order; and thus prediction and divination are utterly impossible, whether by the laws of the science- what science can operate where there is no order?- or by divine possession and inspiration, which no less require that the future be something regulated.

Material entities exposed to all this onslaught may very well be under compulsion to yield to whatsoever the atoms may bring: but would anyone pretend that the acts and states of a soul or mind could be explained by any atomic movements? How can we imagine that the onslaught of an atom, striking downwards or dashing in from any direction, could force the soul to definite and necessary reasonings or impulses or into any reasonings, impulses or thoughts at all, necessary or otherwise? And what of the soul's resistance to bodily states? What movement of atoms could compel one man to be a geometrician, set another studying arithmetic or astronomy, lead a third to the philosophic life? In a word, if we must go, like soulless bodies, wherever bodies push and drive us, there is an end to our personal act and to our very existence as living beings.

The School that erects other material forces into universal causes is met by the same reasoning: we say that while these can warm us and chill us, and destroy weaker forms of existence, they can be causes of nothing that is done in the sphere of mind or soul: all this must be traceable to quite another kind of Principle.

4. Another theory:

The Universe is permeated by one Soul, Cause of all things and events; every separate

phenomenon as a member of a whole moves in its place with the general movement; all the various causes spring into action from one source: therefore, it is argued, the entire descending chain of causes and all their interaction must follow inevitably and so constitute a universal determination. A plant rises from a root, and we are asked on that account to reason that not only the interconnection linking the root to all the members and every member to every other but the entire activity and experience of the plant, as well, must be one organized overruling, a "destiny" of the plant.

But such an extremity of determination, a destiny so all-pervasive, does away with the very destiny that is affirmed: it shatters the sequence and co-operation of causes.

It would be unreasonable to attribute to destiny the movement of our limbs dictated by the mind and will: this is no case of something outside bestowing motion while another thing accepts it and is thus set into action; the mind itself is the prime mover.

Similarly in the case of the universal system; if all that performs act and is subject to experience constitutes one substance, if one thing does not really produce another thing under causes leading back continuously one to another, then it is not a truth that all happens by causes, there is nothing but a rigid unity. We are no "We": nothing is our act; our thought is not ours; our decisions are the reasoning of something outside ourselves; we are no more agents than our feet are kickers when we use them to kick with.

No; each several thing must be a separate thing; there must be acts and thoughts that are our own; the good and evil done by each human being must be his own; and it is quite certain that we must not lay any vileness to the charge of the All.

5. But perhaps the explanation of every particular act or event is rather that they are determined by the spheric movement- the Phora- and by the changing position of the heavenly bodies as these stand at setting or rising or in mid-course and in various aspects with each other.

Augury, it is urged, is able from these indications to foretell what is to happen not merely to the universe as a whole, but even to individuals, and this not merely as regards external conditions of fortune but even as to the events of the mind. We observe, too, how growth or check in other orders of beings- animals and Plants- is determined by their sympathetic relations with the heavenly bodies and how widely they are influenced by them, how, for example, the various countries show a different produce according to their situation on the earth and especially their lie towards the sun. And the effect of place is not limited to plants and animals; it rules human beings too, determining their appearance, their height and colour, their mentality and their desires, their pursuits and their moral habit. Thus the universal circuit would seem to be the monarch of the All.

Now a first answer to this theory is that its advocates have merely devised another shift to immolate to the heavenly bodies all that is ours, our acts of will and our states, all the evil in us, our entire personality; nothing is allowed to us; we are left to be stones set rolling, not men, not beings whose nature implies a task.

But we must be allowed our own- with the understanding that to what is primarily ours, our personal holding, there is added some influx from the All- the distinction must be made between our individual act and what is thrust upon us: we are not to be immolated to the stars.

Place and climate, no doubt, produce constitutions warmer or colder; and the parents tell on the offspring, as is seen in the resemblance between them, very general in personal appearance and noted also in some of the unreflecting states of the mind.

None the less, in spite of physical resemblance and similar environment, we observe the greatest difference in temperament and in ideas: this side of the human being, then, derives from some quite other Principle [than any external causation or destiny]. A further confirmation is found in the efforts we make to correct both bodily constitution and mental aspirations.

If the stars are held to be causing principles on the ground of the possibility of foretelling individual fate or fortune from observation of their positions, then the birds and all the other things which the soothsayer observes for divination must equally be taken as causing what they indicate.

Some further considerations will help to clarify this matter:

The heavens are observed at the moment of a birth and the individual fate is thence predicted in the idea that the stars are no mere indications, but active causes, of the future events. Sometimes the Astrologers tell of noble birth; "the child is born of highly placed parents"; yet how is it possible to make out the stars to be causes of a condition which existed in the father and mother previously to that star pattern on which the prediction is based?

And consider still further:

They are really announcing the fortunes of parents from the birth of children; the character and career of children are included in the predictions as to the parents- they predict for the yet unborn!- in the lot of one brother they are foretelling the death of another; a girl's fate includes that of a future husband, a boy's that of a wife.

Now, can we think that the star-grouping over any particular birth can be the cause of what stands already announced in the facts about the parents? Either the previous star-groupings were the determinants of the child's future career or, if they were not, then neither is the immediate grouping. And notice further that physical likeness to the parents- the Astrologers hold- is of purely domestic origin: this implies that ugliness and beauty are so caused and not by astral movements.

Again, there must at one and the same time be a widespread coming to birth- men, and the most varied forms of animal life at the same moment- and these should all be under the one destiny since the one pattern rules at the moment; how explain that identical

star-groupings give here the human form, there the animal?

6. But in fact everything follows its own Kind; the birth is a horse because it comes from the Horse Kind, a man by springing from the Human Kind; offspring answers to species. Allow the kosmic circuit its part, a very powerful influence upon the thing brought into being: allow the stars a wide material action upon the bodily part of the man, producing heat and cold and their natural resultants in the physical constitution; still does such action explain character, vocation and especially all that seems quite independent of material elements, a man taking to letters, to geometry, to gambling, and becoming an originator in any of these pursuits? And can we imagine the stars, divine beings, bestowing wickedness? And what of a doctrine that makes them wreak vengeance, as for a wrong, because they are in their decline or are being carried to a position beneath the earth- as if a decline from our point of view brought any change to themselves, as if they ever ceased to traverse the heavenly spheres and to make the same figure around the earth.

Nor may we think that these divine beings lose or gain in goodness as they see this one or another of the company in various aspects, and that in their happier position they are benignant to us and, less pleasantly situated, turn maleficent. We can but believe that their circuit is for the protection of the entirety of things while they furnish the incidental service of being letters on which the augur, acquainted with that alphabet, may look and read the future from their pattern- arriving at the thing signified by such analogies as that a soaring bird tells of some lofty event.

7. It remains to notice the theory of the one Causing-Principle alleged to interweave everything with everything else, to make things into a chain, to determine the nature and condition of each phenomenon- a Principle which, acting through seminal Reason-Forms- Logoi Spermatikoi- elaborates all that exists and happens.

The doctrine is close to that which makes the Soul of the Universe the source and cause of all condition and of all movement whether without or- supposing that we are allowed as individuals some little power towards personal act- within ourselves.

But it is the theory of the most rigid and universal Necessity: all the causative forces enter into the system, and so every several phenomenon rises necessarily; where nothing escapes Destiny, nothing has power to check or to change. Such forces beating upon us, as it were, from one general cause leave us no resource but to go where they drive. All our ideas will be determined by a chain of previous causes; our doings will be determined by those ideas; personal action becomes a mere word. That we are the agents does not save our freedom when our action is prescribed by those causes; we have precisely what belongs to everything that lives, to infants guided by blind impulses, to lunatics; all these act; why, even fire acts; there is act in everything that follows the plan of its being, servilely.

No one that sees the implications of this theory can hesitate: unable to halt at such a determinant principle, we seek for other explanations of our action.

8. What can this other cause be; one standing above those treated of; one that leaves nothing causeless, that preserves sequence and order in the Universe and yet allows ourselves some reality and leaves room for prediction and augury?

Soul: we must place at the crest of the world of beings, this other Principle, not merely the Soul of the Universe but, included in it, the Soul of the individual: this, no mean Principle, is needed to be the bond of union in the total of things, not, itself, a thing sprung like things from life-seeds, but a first-hand Cause, bodiless and therefore supreme over itself, free, beyond the reach of kosmic Cause: for, brought into body, it would not be unrestrictedly sovereign; it would hold rank in a series.

Now the environment into which this independent principle enters, when it comes to this midpoint, will be largely led by secondary causes [or, by chance-causes]: there will therefore be a compromise; the action of the Soul will be in part guided by this environment while in other matters it will be sovereign, leading the way where it will. The nobler Soul will have the greater power; the poorer Soul, the lesser. A soul which defers to the bodily temperament cannot escape desire and rage and is abject in poverty, overbearing in wealth, arbitrary in power. The soul of nobler nature holds good against its surroundings; it is more apt to change them than to be changed, so that often it improves the environment and, where it must make concession, at least keeps its innocence.

9. We admit, then, a Necessity in all that is brought about by this compromise between evil and accidental circumstance: what room was there for anything else than the thing that is? Given all the causes, all must happen beyond aye or nay- that is, all the external and whatever may be due to the sidereal circuit- therefore when the Soul has been modified by outer forces and acts under that pressure so that what it does is no more than an unreflecting acceptance of stimulus, neither the act nor the state can be described as voluntary: so, too, when even from within itself, it falls at times below its best and ignores the true, the highest, laws of action.

But when our Soul holds to its Reason-Principle, to the guide, pure and detached and native to itself, only then can we speak of personal operation, of voluntary act. Things so done may truly be described as our doing, for they have no other source; they are the issue of the unmingled Soul, a Principle that is a First, a leader, a sovereign not subject to the errors of ignorance, not to be overthrown by the tyranny of the desires which, where they can break in, drive and drag, so as to allow of no act of ours, but mere answer to stimulus.

10. To sum the results of our argument: All things and events are foreshown and brought into being by causes; but the causation is of two Kinds; there are results originating from the Soul and results due to other causes, those of the environment.

In the action of our Souls all that is done of their own motion in the light of sound reason is the Soul's work, while what is done where they are hindered from their own action is not so much done as suffered. Unwisdom, then, is not due to the Soul, and, in general- if we mean by Fate a compulsion outside ourselves- an act is fated when it is contrary to

wisdom.

But all our best is of our own doing: such is our nature as long as we remain detached. The wise and good do perform acts; their right action is the expression of their own power: in the others it comes in the breathing spaces when the passions are in abeyance; but it is not that they draw this occasional wisdom from outside themselves; simply, they are for the time being unhindered.

SECOND TRACTATE.

ON PROVIDENCE (1).

1. To make the existence and coherent structure of this Universe depend upon automatic activity and upon chance is against all good sense.

Such a notion could be entertained only where there is neither intelligence nor even ordinary perception; and reason enough has been urged against it, though none is really necessary.

But there is still the question as to the process by which the individual things of this sphere have come into being, how they were made.

Some of them seem so undesirable as to cast doubts upon a Universal Providence; and we find, on the one hand, the denial of any controlling power, on the other the belief that the Kosmos is the work of an evil creator.

This matter must be examined through and through from the very first principles. We may, however, omit for the present any consideration of the particular providence, that beforehand decision which accomplishes or holds things in abeyance to some good purpose and gives or withholds in our own regard: when we have established the Universal Providence which we affirm, we can link the secondary with it.

Of course the belief that after a certain lapse of time a Kosmos previously non-existent came into being would imply a foreseeing and a reasoned plan on the part of God providing for the production of the Universe and securing all possible perfection in it- a guidance and partial providence, therefore, such as is indicated. But since we hold the eternal existence of the Universe, the utter absence of a beginning to it, we are forced, in sound and sequent reasoning, to explain the providence ruling in the Universe as a universal consonance with the divine Intelligence to which the Kosmos is subsequent not in time but in the fact of derivation, in the fact that the Divine Intelligence, preceding it in Kind, is its cause as being the Archetype and Model which it merely images, the primal by which, from all eternity, it has its existence and subsistence.

The relationship may be presented thus:

The authentic and primal Kosmos is the Being of the Intellectual Principle and of the Veritable Existent. This contains within itself no spatial distinction, and has none of the

feebleness of division, and even its parts bring no incompleteness to it since here the individual is not severed from the entire. In this Nature inheres all life and all intellect, a life living and having intellection as one act within a unity: every part that it gives forth is a whole; all its content is its very own, for there is here no separation of thing from thing, no part standing in isolated existence estranged from the rest, and therefore nowhere is there any wronging of any other, any opposition. Everywhere one and complete, it is at rest throughout and shows difference at no point; it does not make over any of its content into any new form; there can be no reason for changing what is everywhere perfect.

Why should Reason elaborate yet another Reason, or Intelligence another Intelligence? An indwelling power of making things is in the character of a being not at all points as it should be but making, moving, by reason of some failure in quality. Those whose nature is all blessedness have no more to do than to repose in themselves and be their being.

A widespread activity is dangerous to those who must go out from themselves to act. But such is the blessedness of this Being that in its very non-action it magnificently operates and in its self-dwelling it produces mightily.

2. By derivation from that Authentic Kosmos, one within itself, there subsists this lower kosmos, no longer a true unity.

It is multiple, divided into various elements, thing standing apart from thing in a new estrangement. No longer is there concord unbroken; hostility, too, has entered as the result of difference and distance; imperfection has inevitably introduced discord; for a part is not self-sufficient, it must pursue something outside itself for its fulfillment, and so it becomes the enemy to what it needs.

This Kosmos of parts has come into being not as the result of a judgement establishing its desirability, but by the sheer necessity of a secondary Kind.

The Intellectual Realm was not of a nature to be the ultimate of existents. It was the First and it held great power, all there is of power; this means that it is productive without seeking to produce; for if effort and search were incumbent upon it, the Act would not be its own, would not spring from its essential nature; it would be, like a craftsman, producing by a power not inherent but acquired, mastered by dint of study.

The Intellectual Principle, then, in its unperturbed serenity has brought the universe into being, by communicating from its own store to Matter: and this gift is the Reason-Form flowing from it. For the Emanation of the Intellectual Principle is Reason, an emanation unfailing as long as the Intellectual Principle continues to have place among beings.

The Reason-Principle within a seed contains all the parts and qualities concentrated in identity; there is no distinction, no jarring, no internal hindering; then there comes a pushing out into bulk, part rises in distinction with part, and at once the members of the organism stand in each other's way and begin to wear each other down.

So from this, the One Intellectual Principle, and the Reason-Form emanating from it, our Universe rises and develops part, and inevitably are formed groups concordant and helpful in contrast with groups discordant and combative; sometimes of choice and sometimes incidentally, the parts maltreat each other; engendering proceeds by destruction.

Yet: Amid all that they effect and accept, the divine Realm imposes the one harmonious act; each utters its own voice, but all is brought into accord, into an ordered system, for the universal purpose, by the ruling Reason-Principle. This Universe is not Intelligence and Reason, like the Supernal, but participant in Intelligence and Reason: it stands in need of the harmonizing because it is the meeting ground of Necessity and divine Reason-Necessity pulling towards the lower, towards the unreason which is its own characteristic, while yet the Intellectual Principle remains sovereign over it.

The Intellectual Sphere [the Divine] alone is Reason, and there can never be another Sphere that is Reason and nothing else; so that, given some other system, it cannot be as noble as that first; it cannot be Reason: yet since such a system cannot be merely Matter, which is the utterly unordered, it must be a mixed thing. Its two extremes are Matter and the Divine Reason; its governing principle is Soul, presiding over the conjunction of the two, and to be thought of not as labouring in the task but as administering serenely by little more than an act of presence.

3. Nor would it be sound to condemn this Kosmos as less than beautiful, as less than the noblest possible in the corporeal; and neither can any charge be laid against its source.

The world, we must reflect, is a product of Necessity, not of deliberate purpose: it is due to a higher Kind engendering in its own likeness by a natural process. And none the less, a second consideration, if a considered plan brought it into being it would still be no disgrace to its maker- for it stands a stately whole, complete within itself, serving at once its own purpose and that of all its parts which, leading and lesser alike, are of such a nature as to further the interests of the total. It is, therefore, impossible to condemn the whole on the merits of the parts which, besides, must be judged only as they enter harmoniously or not into the whole, the main consideration, quite overpassing the members which thus cease to have importance. To linger about the parts is to condemn not the Kosmos but some isolated appendage of it; in the entire living Being we fasten our eyes on a hair or a toe neglecting the marvellous spectacle of the complete Man; we ignore all the tribes and kinds of animals except for the meanest; we pass over an entire race, humanity, and bring forward- Thersites.

No: this thing that has come into Being is the Kosmos complete: do but survey it, and surely this is the pleading you will hear:

I am made by a God: from that God I came perfect above all forms of life, adequate to my function, self-sufficing, lacking nothing: for I am the container of all, that is, of every plant and every animal, of all the Kinds of created things, and many Gods and nations of Spirit-Beings and lofty souls and men happy in their goodness.

And do not think that, while earth is ornate with all its growths and with living things of every race, and while the very sea has answered to the power of Soul, do not think that the great air and the ether and the far-spread heavens remain void of it: there it is that all good Souls dwell, infusing life into the stars and into that orderly eternal circuit of the heavens which in its conscious movement ever about the one Centre, seeking nothing beyond, is a faithful copy of the divine Mind. And all that is within me strives towards the Good; and each, to the measure of its faculty, attains. For from that Good all the heavens depend, with all my own Soul and the Gods that dwell in my every part, and all that lives and grows, and even all in me that you may judge inanimate.

But there are degrees of participation: here no more than Existence, elsewhere Life; and, in Life, sometimes mainly that of Sensation, higher again that of Reason, finally Life in all its fullness. We have no right to demand equal powers in the unequal: the finger is not to be asked to see; there is the eye for that; a finger has its own business- to be finger and have finger power.

4. That water extinguishes fire and fire consumes other things should not astonish us. The thing destroyed derived its being from outside itself: this is no case of a self-originating substance being annihilated by an external; it rose on the ruin of something else, and thus in its own ruin it suffers nothing strange; and for every fire quenched, another is kindled.

In the immaterial heaven every member is unchangeably itself for ever; in the heavens of our universe, while the whole has life eternally and so too all the nobler and lordlier components, the Souls pass from body to body entering into varied forms- and, when it may, a Soul will rise outside of the realm of birth and dwell with the one Soul of all. For the embodied lives by virtue of a Form or Idea: individual or partial things exist by virtue of Universals; from these priors they derive their life and maintenance, for life here is a thing of change; only in that prior realm is it unmoving. From that unchangingness, change had to emerge, and from that self-cloistered Life its derivative, this which breathes and stirs, the respiration of the still life of the divine.

The conflict and destruction that reign among living beings are inevitable, since things here are derived, brought into existence because the Divine Reason which contains all of them in the upper Heavens- how could they come here unless they were There?- must outflow over the whole extent of Matter.

Similarly, the very wronging of man by man may be derived from an effort towards the Good; foiled, in their weakness, of their true desire, they turn against each other: still, when they do wrong, they pay the penalty- that of having hurt their Souls by their evil conduct and of degradation to a lower place- for nothing can ever escape what stands decreed in the law of the Universe.

This is not to accept the idea, sometimes urged, that order is an outcome of disorder and law of lawlessness, as if evil were a necessary preliminary to their existence or their manifestation: on the contrary order is the original and enters this sphere as imposed

from without: it is because order, law and reason exist that there can be disorder; breach of law and unreason exist because Reason exists- not that these better things are directly the causes of the bad but simply that what ought to absorb the Best is prevented by its own nature, or by some accident, or by foreign interference. An entity which must look outside itself for a law, may be foiled of its purpose by either an internal or an external cause; there will be some flaw in its own nature, or it will be hurt by some alien influence, for often harm follows, unintended, upon the action of others in the pursuit of quite unrelated aims. Such living beings, on the other hand, as have freedom of motion under their own will sometimes take the right turn, sometimes the wrong.

Why the wrong course is followed is scarcely worth enquiring: a slight deviation at the beginning develops with every advance into a continuously wider and graver error- especially since there is the attached body with its inevitable concomitant of desire- and the first step, the hasty movement not previously considered and not immediately corrected, ends by establishing a set habit where there was at first only a fall.

Punishment naturally follows: there is no injustice in a man suffering what belongs to the condition in which he is; nor can we ask to be happy when our actions have not earned us happiness; the good, only, are happy; divine beings are happy only because they are good.

5. Now, once Happiness is possible at all to Souls in this Universe, if some fail of it, the blame must fall not upon the place but upon the feebleness insufficient to the staunch combat in the one arena where the rewards of excellence are offered. Men are not born divine; what wonder that they do not enjoy a divine life. And poverty and sickness mean nothing to the good- only to the evil are they disastrous- and where there is body there must be ill health.

Besides, these accidents are not without their service in the co-ordination and completion of the Universal system.

One thing perishes, and the Kosmic Reason- whose control nothing anywhere eludes- employs that ending to the beginning of something new; and, so, when the body suffers and the Soul, under the affliction, loses power, all that has been bound under illness and evil is brought into a new set of relations, into another class or order. Some of these troubles are helpful to the very sufferers- poverty and sickness, for example- and as for vice, even this brings something to the general service: it acts as a lesson in right doing, and, in many ways even, produces good; thus, by setting men face to face with the ways and consequences of iniquity, it calls them from lethargy, stirs the deeper mind and sets the understanding to work; by the contrast of the evil under which wrong-doers labour it displays the worth of the right. Not that evil exists for this purpose; but, as we have indicated, once the wrong has come to be, the Reason of the Kosmos employs it to good ends; and, precisely, the proof of the mightiest power is to be able to use the ignoble nobly and, given formlessness, to make it the material of unknown forms.

The principle is that evil by definition is a falling short in good, and good cannot be at full strength in this Sphere where it is lodged in the alien: the good here is in something

else, in something distinct from the Good, and this something else constitutes the falling short for it is not good. And this is why evil is ineradicable: there is, first, the fact that in relation to this principle of Good, thing will always stand less than thing, and, besides, all things come into being through it and are what they are by standing away from it.

6. As for the disregard of desert- the good afflicted, the unworthy thriving- it is a sound explanation no doubt that to the good nothing is evil and to the evil nothing can be good: still the question remains why should what essentially offends our nature fall to the good while the wicked enjoy all it demands? How can such an allotment be approved?

No doubt since pleasant conditions add nothing to true happiness and the unpleasant do not lessen the evil in the wicked, the conditions matter little: as well complain that a good man happens to be ugly and a bad man handsome.

Still, under such a dispensation, there would surely be a propriety, a reasonableness, a regard to merit which, as things are, do not appear, though this would certainly be in keeping with the noblest Providence: even though external conditions do not affect a man's hold upon good or evil, none the less it would seem utterly unfitting that the bad should be the masters, be sovereign in the state, while honourable men are slaves: a wicked ruler may commit the most lawless acts; and in war the worst men have a free hand and perpetrate every kind of crime against their prisoners.

We are forced to ask how such things can be, under a Providence. Certainly a maker must consider his work as a whole, but none the less he should see to the due ordering of all the parts, especially when these parts have Soul, that is, are Living and Reasoning Beings: the Providence must reach to all the details; its functioning must consist in neglecting no point.

Holding, therefore, as we do, despite all, that the Universe lies under an Intellectual Principle whose power has touched every existent, we cannot be absolved from the attempt to show in what way the detail of this sphere is just.

7. A preliminary observation: in looking for excellence in this thing of mixture, the Kosmos, we cannot require all that is implied in the excellence of the unmingled; it is folly to ask for Firsts in the Secondary, and since this Universe contains body, we must allow for some bodily influence upon the total and be thankful if the mingled existent lack nothing of what its nature allowed it to receive from the Divine Reason.

Thus, supposing we were enquiring for the finest type of the human being as known here, we would certainly not demand that he prove identical with Man as in the Divine Intellect; we would think it enough in the Creator to have so brought this thing of flesh and nerve and bone under Reason as to give grace to these corporeal elements and to have made it possible for Reason to have contact with Matter.

Our progress towards the object of our investigation must begin from this principle of gradation which will open to us the wonder of the Providence and of the power by which our universe holds its being.

We begin with evil acts entirely dependent upon the Souls which perpetrate them- the harm, for example, which perverted Souls do to the good and to each other. Unless the foreplanning power alone is to be charged with the vice in such Souls, we have no ground of accusation, no claim to redress: the blame lies on the Soul exercising its choice. Even a Soul, we have seen, must have its individual movement; it is not abstract Spirit; the first step towards animal life has been taken and the conduct will naturally be in keeping with that character.

It is not because the world existed that Souls are here: before the world was, they had it in them to be of the world, to concern themselves with it, to presuppose it, to administer it: it was in their nature to produce it- by whatever method, whether by giving forth some emanation while they themselves remained above, or by an actual descent, or in both ways together, some presiding from above, others descending; some for we are not at the moment concerned about the mode of creation but are simply urging that, however the world was produced, no blame falls on Providence for what exists within it.

There remains the other phase of the question- the distribution of evil to the opposite classes of men: the good go bare while the wicked are rich: all that human need demands, the least deserving have in abundance; it is they that rule; peoples and states are at their disposal. Would not all this imply that the divine power does not reach to earth?

That it does is sufficiently established by the fact that Reason rules in the lower things: animals and plants have their share in Reason, Soul and Life.

Perhaps, then, it reaches to earth but is not master over all?

We answer that the universe is one living organism: as well maintain that while human head and face are the work of nature and of the ruling reason-principle, the rest of the frame is due to other agencies- accident or sheer necessity- and owes its inferiority to this origin, or to the incompetence of unaided Nature. And even granting that those less noble members are not in themselves admirable it would still be neither pious nor even reverent to censure the entire structure.

8. Thus we come to our enquiry as to the degree of excellence found in things of this Sphere, and how far they belong to an ordered system or in what degree they are, at least, not evil.

Now in every living being the upper parts- head, face- are the most beautiful, the mid and lower members inferior. In the Universe the middle and lower members are human beings; above them, the Heavens and the Gods that dwell there; these Gods with the entire circling expanse of the heavens constitute the greater part of the Kosmos: the earth is but a central point, and may be considered as simply one among the stars. Yet human wrong-doing is made a matter of wonder; we are evidently asked to take humanity as the choice member of the Universe, nothing wiser existent!

But humanity, in reality, is poised midway between gods and beasts, and inclines now to the one order, now to the other; some men grow like to the divine, others to the brute, the greater number stand neutral. But those that are corrupted to the point of approximating to irrational animals and wild beasts pull the mid-folk about and inflict wrong upon them; the victims are no doubt better than the wrongdoers, but are at the mercy of their inferiors in the field in which they themselves are inferior, where, that is, they cannot be classed among the good since they have not trained themselves in self-defence.

A gang of lads, morally neglected, and in that respect inferior to the intermediate class, but in good physical training, attack and throw another set, trained neither physically nor morally, and make off with their food and their dainty clothes. What more is called for than a laugh?

And surely even the lawgiver would be right in allowing the second group to suffer this treatment, the penalty of their sloth and self-indulgence: the gymnasium lies there before them, and they, in laziness and luxury and listlessness, have allowed themselves to fall like fat-loaded sheep, a prey to the wolves.

But the evil-doers also have their punishment: first they pay in that very wolfishness, in the disaster to their human quality: and next there is laid up for them the due of their Kind: living ill here, they will not get off by death; on every precedent through all the line there waits its sequent, reasonable and natural- worse to the bad, better to the good.

This at once brings us outside the gymnasium with its fun for boys; they must grow up, both kinds, amid their childishness and both one day stand girt and armed. Then there is a finer spectacle than is ever seen by those that train in the ring. But at this stage some have not armed themselves- and the duly armed win the day.

Not even a God would have the right to deal a blow for the unwarlike: the law decrees that to come safe out of battle is for fighting men, not for those that pray. The harvest comes home not for praying but for tilling; healthy days are not for those that neglect their health: we have no right to complain of the ignoble getting the richer harvest if they are the only workers in the fields, or the best.

Again: it is childish, while we carry on all the affairs of our life to our own taste and not as the Gods would have us, to expect them to keep all well for us in spite of a life that is lived without regard to the conditions which the Gods have prescribed for our well-being. Yet death would be better for us than to go on living lives condemned by the laws of the Universe. If things took the contrary course, if all the modes of folly and wickedness brought no trouble in life- then indeed we might complain of the indifference of a Providence leaving the victory to evil.

Bad men rule by the feebleness of the ruled: and this is just; the triumph of weaklings would not be just.

9. It would not be just, because Providence cannot be a something reducing us to

nothingness: to think of Providence as everything, with no other thing in existence, is to annihilate the Universe; such a providence could have no field of action; nothing would exist except the Divine. As things are, the Divine, of course, exists, but has reached forth to something other- not to reduce that to nothingness but to preside over it; thus in the case of Man, for instance, the Divine presides as the Providence, preserving the character of human nature, that is the character of a being under the providential law, which, again, implies subjection to what that law may enjoin.

And that law enjoins that those who have made themselves good shall know the best of life, here and later, the bad the reverse. But the law does not warrant the wicked in expecting that their prayers should bring others to sacrifice themselves for their sakes; or that the gods should lay aside the divine life in order to direct their daily concerns; or that good men, who have chosen a path nobler than all earthly rule, should become their rulers. The perverse have never made a single effort to bring the good into authority, nor do they take any steps to improve themselves; they are all spite against anyone that becomes good of his own motion, though if good men were placed in authority the total of goodness would be increased.

In sum: Man has come into existence, a living being but not a member of the noblest order; he occupies by choice an intermediate rank; still, in that place in which he exists, Providence does not allow him to be reduced to nothing; on the contrary he is ever being led upwards by all those varied devices which the Divine employs in its labour to increase the dominance of moral value. The human race, therefore, is not deprived by Providence of its rational being; it retains its share, though necessarily limited, in wisdom, intelligence, executive power and right doing, the right doing, at least, of individuals to each other- and even in wronging others people think they are doing right and only paying what is due.

Man is, therefore, a noble creation, as perfect as the scheme allows; a part, no doubt, in the fabric of the All, he yet holds a lot higher than that of all the other living things of earth.

Now, no one of any intelligence complains of these others, man's inferiors, which serve to the adornment of the world; it would be feeble indeed to complain of animals biting man, as if we were to pass our days asleep. No: the animal, too, exists of necessity, and is serviceable in many ways, some obvious and many progressively discovered- so that not one lives without profit to itself and even to humanity. It is ridiculous, also, to complain that many of them are dangerous- there are dangerous men abroad as well- and if they distrust us, and in their distrust attack, is that anything to wonder at?

10. But: if the evil in men is involuntary, if their own will has not made them what they are, how can we either blame wrong-doers or even reproach their victims with suffering through their own fault?

If there is a Necessity, bringing about human wickedness either by force of the celestial movement or by a rigorous sequence set up by the First Cause, is not the evil a thin rooted in Nature? And if thus the Reason-Principle of the universe is the creator of evil,

surely all is injustice?

No: Men are no doubt involuntary sinners in the sense that they do not actually desire to sin; but this does not alter the fact that wrongdoers, of their own choice, are, themselves, the agents; it is because they themselves act that the sin is in their own; if they were not agents they could not sin.

The Necessity [held to underlie human wickedness] is not an outer force [actually compelling the individual], but exists only in the sense of a universal relationship.

Nor is the force of the celestial Movement such as to leave us powerless: if the universe were something outside and apart from us it would stand as its makers willed so that, once the gods had done their part, no man, however impious, could introduce anything contrary to their intention. But, as things are, efficient act does come from men: given the starting Principle, the secondary line, no doubt, is inevitably completed; but each and every principle contributes towards the sequence. Now Men are Principles, or, at least, they are moved by their characteristic nature towards all that is good, and that nature is a Principle, a freely acting cause.

11. Are we, then, to conclude that particular things are determined by Necessities rooted in Nature and by the sequence of causes, and that everything is as good as anything can be?

No: the Reason-Principle is the sovereign, making all: it wills things as they are and, in its reasonable act, it produces even what we know as evil: it cannot desire all to be good: an artist would not make an animal all eyes; and in the same way, the Reason-Principle would not make all divine; it makes Gods but also celestial spirits, the intermediate order, then men, then the animals; all is graded succession, and this in no spirit of grudging but in the expression of a Reason teeming with intellectual variety.

We are like people ignorant of painting who complain that the colours are not beautiful everywhere in the picture: but the Artist has laid on the appropriate tint to every spot. Or we are censuring a drama because the persons are not all heroes but include a servant and a rustic and some scurrilous clown; yet take away the low characters and the power of the drama is gone; these are part and parcel of it.

12. Suppose this Universe were the direct creation of the Reason-Principle applying itself, quite unchanged, to Matter, retaining, that is, the hostility to partition which it derives from its Prior, the Intellectual Principle- then, this its product, so produced, would be of supreme and unparalleled excellence. But the Reason-Principle could not be a thing of entire identity or even of closely compact diversity; and the mode in which it is here manifested is no matter of censure since its function is to be all things, each single thing in some distinctive way.

But has it not, besides itself entering Matter, brought other beings down? Has it not for example brought Souls into Matter and, in adapting them to its creation, twisted them against their own nature and been the ruin of many of them? And can this be right?

The answer is that the Souls are, in a fair sense, members of this Reason-Principle and that it has not adapted them to the creation by perverting them, but has set them in the place here to which their quality entitles them.

13. And we must not despise the familiar observation that there is something more to be considered than the present. There are the periods of the past and, again, those in the future; and these have everything to do with fixing worth of place.

Thus a man, once a ruler, will be made a slave because he abused his power and because the fall is to his future good. Those that have money will be made poor- and to the good poverty is no hindrance. Those that have unjustly killed, are killed in turn, unjustly as regards the murderer but justly as regards the victim, and those that are to suffer are thrown into the path of those that administer the merited treatment.

It is not an accident that makes a man a slave; no one is a prisoner by chance; every bodily outrage has its due cause. The man once did what he now suffers. A man that murders his mother will become a woman and be murdered by a son; a man that wrongs a woman will become a woman, to be wronged.

Hence arises that awesome word “Adrasteia” [the Inevadable Retribution]; for in very truth this ordinance is an Adrasteia, justice itself and a wonderful wisdom.

We cannot but recognize from what we observe in this universe that some such principle of order prevails throughout the entire of existence- the minutest of things a tributary to the vast total; the marvellous art shown not merely in the mightiest works and sublimest members of the All, but even amid such littleness as one would think Providence must disdain: the varied workmanship of wonder in any and every animal form; the world of vegetation, too; the grace of fruits and even of leaves, the lavishness, the delicacy, the diversity of exquisite bloom; and all this not issuing once, and then to die out, but made ever and ever anew as the Transcendent Beings move variously over this earth.

In all the changing, there is no change by chance: there is no taking of new forms but to desirable ends and in ways worthy of Divine Powers. All that is Divine executes the Act of its quality; its quality is the expression of its essential Being: and this essential Being in the Divine is the Being whose activities produce as one thing the desirable and the just- for if the good and the just are not produced there, where, then, have they their being?

14. The ordinance of the Kosmos, then, is in keeping with the Intellectual Principle. True, no reasoning went to its creation, but it so stands that the keenest reasoning must wonder- since no reasoning could be able to make it otherwise- at the spectacle before it, a product which, even in the Kinds of the partial and particular Sphere, displays the Divine Intelligence to a degree in which no arranging by reason could express it. Every one of the ceaselessly recurrent types of being manifests a creating Reason-Principle above all censure. No fault is to be found unless on the assumption that everything

ought to come into being with all the perfection of those that have never known such a coming, the Eternals. In that case, things of the Intellectual realm and things of the realm of sense must remain one unbroken identity for ever.

In this demand for more good than exists, there is implied a failure to recognize that the form allotted to each entity is sufficient in itself; it is like complaining because one kind of animal lacks horns. We ought to understand both that the Reason-Principle must extend to every possible existent and, at the same time, that every greater must include lesser things, that to every whole belong its parts, and that all cannot be equality unless all part is to be absent.

This is why in the Over-World each entity is all, while here, below, the single thing is not all [is not the Universe but a "Self"]. Thus too, a man, an individual, in so far as he is a part, is not Humanity complete: but wheresoever there is associated with the parts something that is no part [but a Divine, an Intellectual Being], this makes a whole of that in which it dwells. Man, man as partial thing, cannot be required to have attained to the very summit of goodness: if he had, he would have ceased to be of the partial order. Not that there is any grudging in the whole towards the part that grows in goodness and dignity; such an increase in value is a gain to the beauty of the whole; the lesser grows by being made over in the likeness of the greater, by being admitted, as it were, to something of that greatness, by sharing in that rank, and thus even from this place of man, from man's own self, something gleams forth, as the stars shine in the divine firmament, so that all appears one great and lovely figure- living or wrought in the furnaces of craftsmanship- with stars radiant not only in the ears and on the brow but on the breasts too, and wherever else they may be displayed in beauty.

15. These considerations apply very well to things considered as standing alone: but there is a stumbling-block, a new problem, when we think of all these forms, permanent and ceaselessly produced, in mutual relationship.

The animals devour each other: men attack each other: all is war without rest, without truce: this gives new force to the question how Reason can be author of the plan and how all can be declared well done.

This new difficulty is not met by the former answer; that all stands as well as the nature of things allows; that the blame for their condition falls on Matter dragging them down; that, given the plan as we know it, evil cannot be eliminated and should not be; that the Matter making its presence felt is still not supreme but remains an element taken in from outside to contribute to a definite total, or rather to be itself brought to order by Reason.

The Divine Reason is the beginning and the end; all that comes into being must be rational and fall at its coming into an ordered scheme reasonable at every point. Where, then, is the necessity of this bandit war of man and beast?

This devouring of Kind by Kind is necessary as the means to the transmutation of living things which could not keep form for ever even though no other killed them: what grievance is it that when they must go their despatch is so planned as to be serviceable

to others?

Still more, what does it matter when they are devoured only to return in some new form? It comes to no more than the murder of one of the personages in a play; the actor alters his make-up and enters in a new role. The actor, of course, was not really killed; but if dying is but changing a body as the actor changes a costume, or even an exit from the body like the exit of the actor from the boards when he has no more to say or do, what is there so very dreadful in this transformation of living beings one into another?

Surely it is much better so than if they had never existed: that way would mean the bleak quenching of life, precluded from passing outside itself; as the plan holds, life is poured copiously throughout a Universe, engendering the universal things and weaving variety into their being, never at rest from producing an endless sequence of comeliness and shapeliness, a living pastime.

Men directing their weapons against each other- under doom of death yet neatly lined up to fight as in the pyrrhic sword-dances of their sport- this is enough to tell us that all human intentions are but play, that death is nothing terrible, that to die in a war or in a fight is but to taste a little beforehand what old age has in store, to go away earlier and come back the sooner. So for misfortunes that may accompany life, the loss of property, for instance; the loser will see that there was a time when it was not his, that its possession is but a mock boon to the robbers, who will in their turn lose it to others, and even that to retain property is a greater loss than to forfeit it.

Murders, death in all its guises, the reduction and sacking of cities, all must be to us just such a spectacle as the changing scenes of a play; all is but the varied incident of a plot, costume on and off, acted grief and lament. For on earth, in all the succession of life, it is not the Soul within but the Shadow outside of the authentic man, that grieves and complains and acts out the plot on this world stage which men have dotted with stages of their own constructing. All this is the doing of man knowing no more than to live the lower and outer life, and never perceiving that, in his weeping and in his graver doings alike, he is but at play; to handle austere matters austere is reserved for the thoughtful: the other kind of man is himself a futility. Those incapable of thinking gravely read gravity into frivolities which correspond to their own frivolous Nature. Anyone that joins in their trifling and so comes to look on life with their eyes must understand that by lending himself to such idleness he has laid aside his own character. If Socrates himself takes part in the trifling, he trifles in the outer Socrates.

We must remember, too, that we cannot take tears and laments as proof that anything is wrong; children cry and whimper where there is nothing amiss.

16. But if all this is true, what room is left for evil? Where are we to place wrong-doing and sin?

How explain that in a world organized in good, the efficient agents [human beings] behave unjustly, commit sin? And how comes misery if neither sin nor injustice exists?

Again, if all our action is determined by a natural process, how can the distinction be maintained between behaviour in accordance with nature and behaviour in conflict with it?

And what becomes of blasphemy against the divine? The blasphemer is made what he is: a dramatist has written a part insulting and maligning himself and given it to an actor to play.

These considerations oblige us to state the Logos [the Reason-Principle of the Universe] once again, and more clearly, and to justify its nature.

This Reason-Principle, then- let us dare the definition in the hope of conveying the truth- this Logos is not the Intellectual Principle unmingled, not the Absolute Divine Intellect; nor does it descend from the pure Soul alone; it is a dependent of that Soul while, in a sense, it is a radiation from both those divine Hypostases; the Intellectual Principle and the Soul- the Soul as conditioned by the Intellectual Principle engender this Logos which is a Life holding restfully a certain measure of Reason.

Now all life, even the least valuable, is an activity, and not a blind activity like that of flame; even where there is not sensation the activity of life is no mere haphazard play of Movement: any object in which life is present, and object which participates in Life, is at once enreasoned in the sense that the activity peculiar to life is formative, shaping as it moves.

Life, then, aims at pattern as does the pantomimic dancer with his set movements; the mime, in himself, represents life, and, besides, his movements proceed in obedience to a pattern designed to symbolize life.

Thus far to give us some idea of the nature of Life in general.

But this Reason-Principle which emanates from the complete unity, divine Mind, and the complete unity Life [= Soul]- is neither a uniate complete Life nor a uniate complete divine Mind, nor does it give itself whole and all-including to its subject. [By an imperfect communication] it sets up a conflict of part against part: it produces imperfect things and so engenders and maintains war and attack, and thus its unity can be that only of a sum-total not of a thing undivided. At war with itself in the parts which it now exhibits, it has the unity, or harmony, of a drama torn with struggle. The drama, of course, brings the conflicting elements to one final harmony, weaving the entire story of the clashing characters into one thing; while in the Logos the conflict of the divergent elements rises within the one element, the Reason-Principle: the comparison therefore is rather with a harmony emerging directly from the conflicting elements themselves, and the question becomes what introduces clashing elements among these Reason-Principles.

Now in the case of music, tones high and low are the product of Reason-Principles which, by the fact that they are Principles of harmony, meet in the unit of Harmony, the absolute Harmony, a more comprehensive Principle, greater than they and including them as its parts. Similarly in the Universe at large we find contraries- white and black,

hot and cold, winged and wingless, footed and footless, reasoning and unreasoning- but all these elements are members of one living body, their sum-total; the Universe is a self-accordant entity, its members everywhere clashing but the total being the manifestation of a Reason-Principle. That one Reason-Principle, then, must be the unification of conflicting Reason-Principles whose very opposition is the support of its coherence and, almost, of its Being.

And indeed, if it were not multiple, it could not be a Universal Principle, it could not even be at all a Reason-Principle; in the fact of its being a Reason-Principle is contained the fact of interior difference. Now the maximum of difference is contrariety; admitting that this differentiation exists and creates, it will create difference in the greatest and not in the least degree; in other words, the Reason-Principle, bringing about differentiation to the uttermost degree, will of necessity create contrarieties: it will be complete only by producing itself not in merely diverse things but in contrary things.

17. The nature of the Reason-Principle is adequately expressed in its Act and, therefore, the wider its extension the nearer will its productions approach to full contrariety: hence the world of sense is less a unity than is its Reason-Principle; it contains a wider multiplicity and contrariety: its partial members will, therefore, be urged by a closer intention towards fullness of life, a warmer desire for unification.

But desire often destroys the desired; it seeks its own good, and, if the desired object is perishable, the ruin follows: and the partial thing straining towards its completing principle draws towards itself all it possibly can.

Thus, with the good we have the bad: we have the opposed movements of a dancer guided by one artistic plan; we recognize in his steps the good as against the bad, and see that in the opposition lies the merit of the design.

But, thus, the wicked disappear?

No: their wickedness remains; simply, their role is not of their own planning.

But, surely, this excuses them?

No; excuse lies with the Reason-Principle- and the Reason-Principle does not excuse them.

No doubt all are members of this Principle but one is a good man, another is bad- the larger class, this- and it goes as in a play; the poet while he gives each actor a part is also using them as they are in their own persons: he does not himself rank the men as leading actor, second, third; he simply gives suitable words to each, and by that assignment fixes each man's standing.

Thus, every man has his place, a place that fits the good man, a place that fits the bad: each within the two orders of them makes his way, naturally, reasonably, to the place, good or bad, that suits him, and takes the position he has made his own. There he talks

and acts, in blasphemy and crime or in all goodness: for the actors bring to this play what they were before it was ever staged.

In the dramas of human art, the poet provides the words but the actors add their own quality, good or bad- for they have more to do than merely repeat the author's words- in the truer drama which dramatic genius imitates in its degree, the Soul displays itself in a part assigned by the creator of the piece.

As the actors of our stages get their masks and their costume, robes of state or rags, so a Soul is allotted its fortunes, and not at haphazard but always under a Reason: it adapts itself to the fortunes assigned to it, attunes itself, ranges itself rightly to the drama, to the whole Principle of the piece: then it speaks out its business, exhibiting at the same time all that a Soul can express of its own quality, as a singer in a song. A voice, a bearing, naturally fine or vulgar, may increase the charm of a piece; on the other hand, an actor with his ugly voice may make a sorry exhibition of himself, yet the drama stands as good a work as ever: the dramatist, taking the action which a sound criticism suggests, disgraces one, taking his part from him, with perfect justice: another man he promotes to more serious roles or to any more important play he may have, while the first is cast for whatever minor work there may be.

Just so the Soul, entering this drama of the Universe, making itself a part of the Play, bringing to its acting its personal excellence or defect, set in a definite place at the entry and accepting from the author its entire role- superimposed upon its own character and conduct- just so, it receives in the end its punishment and reward.

But these actors, Souls, hold a peculiar dignity: they act in a vaster place than any stage: the Author has made them masters of all this world; they have a wide choice of place; they themselves determine the honour or discredit in which they are agents since their place and part are in keeping with their quality: they therefore fit into the Reason-Principle of the Universe, each adjusted, most legitimately, to the appropriate environment, as every string of the lyre is set in the precisely right position, determined by the Principle directing musical utterance, for the due production of the tones within its capacity. All is just and good in the Universe in which every actor is set in his own quite appropriate place, though it be to utter in the Darkness and in Tartarus the dreadful sounds whose utterance there is well.

This Universe is good not when the individual is a stone, but when everyone throws in his own voice towards a total harmony, singing out a life- thin, harsh, imperfect, though it be. The Syrx does not utter merely one pure note; there is a thin obscure sound which blends in to make the harmony of Syrx music: the harmony is made up from tones of various grades, all the tones differing, but the resultant of all forming one sound.

Similarly the Reason-Principle entire is One, but it is broken into unequal parts: hence the difference of place found in the Universe, better spots and worse; and hence the inequality of Souls, finding their appropriate surroundings amid this local inequality. The diverse places of this sphere, the Souls of unequal grade and unlike conduct, are wen

exemplified by the distinction of parts in the Syrnix or any other instrument: there is local difference, but from every position every string gives forth its own tone, the sound appropriate, at once, to its particular place and to the entire plan.

What is evil in the single Soul will stand a good thing in the universal system; what in the unit offends nature will serve nature in the total event- and still remains the weak and wrong tone it is, though its sounding takes nothing from the worth of the whole, just as, in another order of image, the executioner's ugly office does not mar the well-governed state: such an officer is a civic necessity; and the corresponding moral type is often serviceable; thus, even as things are, all is well.

18. Souls vary in worth; and the difference is due, among other causes, to an almost initial inequality; it is in reason that, standing to the Reason-Principle, as parts, they should be unequal by the fact of becoming separate.

We must also remember that every Soul has its second grade and its third, and that, therefore, its expression may take any one of three main forms. But this point must be dealt with here again: the matter requires all possible elucidation.

We may perhaps think of actors having the right to add something to the poet's words: the drama as it stands is not perfectly filled in, and they are to supply where the Author has left blank spaces here and there; the actors are to be something else as well; they become parts of the poet, who on his side has a foreknowledge of the word they will add, and so is able to bind into one story what the actors bring in and what is to follow.

For, in the All, the sequences, including what follows upon wickedness, become Reason-Principles, and therefore in right reason. Thus: from adultery and the violation of prisoners the process of nature will produce fine children, to grow, perhaps, into fine men; and where wicked violence has destroyed cities, other and nobler cities may rise in their place.

But does not this make it absurd to introduce Souls as responsible causes, some acting for good and some for evil? If we thus exonerate the Reason-Principle from any part in wickedness do we not also cancel its credit for the good? Why not simply take the doings of these actors for representative parts of the Reason-Principle as the doings of stage-actors are representative parts of the stage-drama? Why not admit that the Reason-Principle itself includes evil action as much as good action, and inspires the precise conduct of all its representatives? Would not this be all the more Plausible in that the universal drama is the completer creation and that the Reason-Principle is the source of all that exists?

But this raises the question: "What motive could lead the Logos to produce evil?"

The explanation, also, would take away all power in the Universe from Souls, even those nearest to the divine; they would all be mere parts of a Reason-Principle.

And, further- unless all Reason-Principles are Souls- why should some be souls and

others exclusively Reason-Principles when the All is itself a Soul?

THIRD TRACTATE.

ON PROVIDENCE (2).

1. What is our answer?

All events and things, good and evil alike, are included under the Universal Reason-Principle of which they are parts- strictly "included" for this Universal Idea does not engender them but encompasses them.

The Reason-Principles are acts or expressions of a Universal Soul; its parts [i.e., events good and evil] are expressions of these Soulparts.

This unity, Soul, has different parts; the Reason-Principles, correspondingly, will also have their parts, and so, too, will the ultimates of the system, all that they bring into being.

The Souls are in harmony with each other and so, too, are their acts and effects; but it is harmony in the sense of a resultant unity built out of contraries. All things, as they rise from a unity, come back to unity by a sheer need of nature; differences unfold themselves, contraries are produced, but all is drawn into one organized system by the unity at the source.

The principle may be illustrated from the different classes of animal life: there is one genus, horse, though horses among themselves fight and bite and show malice and angry envy: so all the others within the unity of their Kind; and so humanity.

All these types, again, can be ranged under the one Kind, that of living things; objects without life can be thought of under their specific types and then be resumed under the one Kind of the "non-living"; if we choose to go further yet, living and non-living may be included under the one Kind, "Beings," and, further still, under the Source of Being.

Having attached all to this source, we turn to move down again in continuous division: we see the Unity fissuring, as it reaches out into Universality, and yet embracing all in one system so that with all its differentiation it is one multiple living thing- an organism in which each member executes the function of its own nature while it still has its being in that One Whole; fire burns; horse does horse work; men give, each the appropriate act of the peculiar personal quality- and upon the several particular Kinds to which each belongs follow the acts, and the good or evil of the life.

2. Circumstances are not sovereign over the good of life, for they are themselves moulded by their priors and come in as members of a sequence. The Leading-Principle holds all the threads while the minor agents, the individuals, serve according to their own capacities, as in a war the generalissimo lays down the plan and his subordinates do their best to its furtherance. The Universe has been ordered by a Providence that

may be compared to a general; he has considered operations, conditions and such practical needs as food and drink, arms and engines of war; all the problem of reconciling these complex elements has been worked out beforehand so as to make it probable that the final event may be success. The entire scheme emerges from the general's mind with a certain plausible promise, though it cannot cover the enemy's operations, and there is no power over the disposition of the enemy's forces: but where the mighty general is in question whose power extends over all that is, what can pass unordered, what can fail to fit into the plan?

3. For, even though the I is sovereign in choosing, yet by the fact of the choice the thing done takes its place in the ordered total. Your personality does not come from outside into the universal scheme; you are a part of it, you and your personal disposition.

But what is the cause of this initial personality?

This question resolves itself into two: are we to make the Creator, if Creator there is, the cause of the moral quality of the individual or does the responsibility lie with the creature?

Or is there, perhaps, no responsibility? After all, none is charged in the case of plants brought into being without the perceptive faculties; no one is blamed because animals are not all that men are- which would be like complaining that men are not all that gods are. Reason acquits plant and animal and, their maker; how can it complain because men do not stand above humanity?

If the reproach simply means that Man might improve by bringing from his own stock something towards his betterment we must allow that the man failing in this is answerable for his own inferiority: but if the betterment must come not from within the man but from without, from his Author, it is folly to ask more than has been given, as foolish in the case of man as in plant and animal.

The question is not whether a thing is inferior to something else but whether in its own Kind it suffices to its own part; universal equality there cannot be.

Then the Reason-Principle has measured things out with the set purpose of inequality?

Certainly not: the inequality is inevitable by the nature of things: the Reason-Principle of this Universe follows upon a phase of the Soul; the Soul itself follows upon an Intellectual Principle, and this Intellectual Principle is not one among the things of the Universe but is all things; in all things, there is implied variety of things; where there is variety and not identity there must be primals, secondaries, tertiaries and every grade downward. Forms of life, then, there must be that are not pure Soul but the dwindling of Souls enfeebled stage by stage of the process. There is, of course, a Soul in the Reason-Principle constituting a living being, but it is another Soul [a lesser phase], not that [the Supreme Soul] from which the Reason-Principle itself derives; and this combined vehicle of life weakens as it proceeds towards matter, and what it engenders is still more deficient. Consider how far the engendered stands from its origin and yet,

what a marvel!

In sum nothing can secure to a thing of process the quality of the prior order, loftier than all that is product and amenable to no charge in regard to it: the wonder is, only, that it reaches and gives to the lower at all, and that the traces of its presence should be so noble. And if its outgiving is greater than the lower can appropriate, the debt is the heavier; all the blame must fall upon the unreceptive creature, and Providence be the more exalted.

4. If man were all of one piece- I mean, if he were nothing more than a made thing, acting and acted upon according to a fixed nature- he could be no more subject to reproach and punishment than the mere animals. But as the scheme holds, man is singled out for condemnation when he does evil; and this with justice. For he is no mere thing made to rigid plan; his nature contains a Principle apart and free.

This does not, however, stand outside of Providence or of the Reason of the All; the Over-World cannot be dependent upon the World of Sense. The higher shines down upon the lower, and this illumination is Providence in its highest aspect: The Reason-Principle has two phases, one which creates the things of process and another which links them with the higher beings: these higher beings constitute the over-providence on which depends that lower providence which is the secondary Reason-Principle inseparably united with its primal: the two- the Major and Minor Providence- acting together produce the universal woof, the one all-comprehensive Providence.

Men possess, then, a distinctive Principle: but not all men turn to account all that is in their Nature; there are men that live by one Principle and men that live by another or, rather, by several others, the least noble. For all these Principles are present even when not acting upon the man- though we cannot think of them as lying idle; everything performs its function.

“But,” it will be said, “what reason can there be for their not acting upon the man once they are present; inaction must mean absence?”

We maintain their presence always, nothing void of them.

But surely not where they exercise no action? If they necessarily reside in all men, surely they must be operative in all- this Principle of free action, especially.

First of all, this free Principle is not an absolute possession of the animal Kinds and is not even an absolute possession to all men.

So this Principle is not the only effective force in all men?

There is no reason why it should not be. There are men in whom it alone acts, giving its character to the life while all else is but Necessity [and therefore outside of blame].

For [in the case of an evil life] whether it is that the constitution of the man is such as to drive him down the troubled paths or whether [the fault is mental or spiritual in that] the desires have gained control, we are compelled to attribute the guilt to the substratum [something inferior to the highest principle in Man]. We would be naturally inclined to say that this substratum [the responsible source of evil] must be Matter and not, as our argument implies, the Reason-Principle; it would appear that not the Reason-Principle but Matter were the dominant, crude Matter at the extreme and then Matter as shaped in the realized man: but we must remember that to this free Principle in man [which is a phase of the All Soul] the Substratum [the direct inferior to be moulded] is [not Matter but] the Reason-Principle itself with whatever that produces and moulds to its own form, so that neither crude Matter nor Matter organized in our human total is sovereign within us.

The quality now manifested may be probably referred to the conduct of a former life; we may suppose that previous actions have made the Reason-Principle now governing within us inferior in radiance to that which ruled before; the Soul which later will shine out again is for the present at a feebler power.

And any Reason-Principle may be said to include within itself the Reason-Principle of Matter which therefore it is able to elaborate to its own purposes, either finding it consonant with itself or bestowing upon it the quality which makes it so. The Reason-Principle of an ox does not occur except in connection with the Matter appropriate to the ox-Kind. It must be by such a process that the transmigration, of which we read takes place; the Soul must lose its nature, the Reason-Principle be transformed; thus there comes the ox-soul which once was Man.

The degradation, then, is just.

Still, how did the inferior Principle ever come into being, and how does the higher fall to it?

Once more- not all things are Firsts; there are Secondaries and Tertiaries, of a nature inferior to that of their Priors; and a slight tilt is enough to determine the departure from the straight course. Further, the linking of any one being with any other amounts to a blending such as to produce a distinct entity, a compound of the two; it is not that the greater and prior suffers any diminution of its own nature; the lesser and secondary is such from its very beginning; it is in its own nature the lesser thing it becomes, and if it suffers the consequences, such suffering is merited: all our reasonings on these questions must take account of previous living as the source from which the present takes its rise.

5. There is, then a Providence, which permeates the Kosmos from first to last, not everywhere equal, as in a numerical distribution, but proportioned, differing, according to the grades of place- just as in some one animal, linked from first to last, each member has its own function, the nobler organ the higher activity while others successively concern the lower degrees of the life, each part acting of itself, and experiencing what belongs to its own nature and what comes from its relation with every

other. Strike, and what is designed for utterance gives forth the appropriate volume of sound while other parts take the blow in silence but react in their own especial movement; the total of all the utterance and action and receptivity constitutes what we may call the personal voice, life and history of the living form. The parts, distinct in Kind, have distinct functions: the feet have their work and the eyes theirs; the understanding serves to one end, the Intellectual Principle to another.

But all sums to a unity, a comprehensive Providence. From the inferior grade downwards is Fate: the upper is Providence alone: for in the Intellectual Kosmos all is Reason-Principle or its Priors-Divine Mind and unmingled Soul-and immediately upon these follows Providence which rises from Divine Mind, is the content of the Unmingled Soul, and, through this Soul, is communicated to the Sphere of living things.

This Reason-Principle comes as a thing of unequal parts, and therefore its creations are unequal, as, for example, the several members of one Living Being. But after this allotment of rank and function, all act consonant with the will of the gods keeps the sequence and is included under the providential government, for the Reason-Principle of providence is god-serving.

All such right-doing, then, is linked to Providence; but it is not therefore performed by it: men or other agents, living or lifeless, are causes of certain things happening, and any good that may result is taken up again by Providence. In the total, then, the right rules and what has happened amiss is transformed and corrected. Thus, to take an example from a single body, the Providence of a living organism implies its health; let it be gashed or otherwise wounded, and that Reason-Principle which governs it sets to work to draw it together, knit it anew, heal it, and put the affected part to rights.

In sum, evil belongs to the sequence of things, but it comes from necessity. It originates in ourselves; it has its causes no doubt, but we are not, therefore, forced to it by Providence: some of these causes we adapt to the operation of Providence and of its subordinates, but with others we fail to make the connection; the act instead of being ranged under the will of Providence consults the desire of the agent alone or of some other element in the Universe, something which is either itself at variance with Providence or has set up some such state of variance in ourselves.

The one circumstance does not produce the same result wherever it acts; the normal operation will be modified from case to case: Helen's beauty told very differently on Paris and on Idomeneus; bring together two handsome people of loose character and two living honourably and the resulting conduct is very different; a good man meeting a libertine exhibits a distinct phase of his nature and, similarly, the dissolute answer to the society of their betters.

The act of the libertine is not done by Providence or in accordance with Providence; neither is the action of the good done by Providence- it is done by the man- but it is done in accordance with Providence, for it is an act consonant with the Reason-Principle. Thus a patient following his treatment is himself an agent and yet is acting in accordance with the doctor's method inspired by the art concerned with the

causes of health and sickness: what one does against the laws of health is one's act, but an act conflicting with the Providence of medicine.

6. But, if all this be true, how can evil fall within the scope of seership? The predictions of the seers are based on observation of the Universal Circuit: how can this indicate the evil with the good?

Clearly the reason is that all contraries coalesce. Take, for example, Shape and Matter: the living being [of the lower order] is a coalescence of these two; so that to be aware of the Shape and the Reason-Principle is to be aware of the Matter on which the Shape has been imposed.

The living-being of the compound order is not present [as pure and simple Idea] like the living being of the Intellectual order: in the compound entity, we are aware, at once, of the Reason-Principle and of the inferior element brought under form. Now the Universe is such a compound living thing: to observe, therefore, its content is to be aware not less of its lower elements than of the Providence which operates within it.

This Providence reaches to all that comes into being; its scope therefore includes living things with their actions and states, the total of their history at once overruled by the Reason-Principle and yet subject in some degree to Necessity.

These, then, are presented as mingled both by their initial nature and by the continuous process of their existence; and the Seer is not able to make a perfect discrimination setting on the one side Providence with all that happens under Providence and on the other side what the substrate communicates to its product. Such discrimination is not for a man, not for a wise man or a divine man: one may say it is the prerogative of a god. Not causes but facts lie in the Seer's province; his art is the reading of the scriptures of Nature which tell of the ordered and never condescend to the disorderly; the movement of the Universe utters its testimony to him and, before men and things reveal themselves, brings to light what severally and collectively they are.

Here conspires with There and There with Here, elaborating together the consistency and eternity of a Kosmos and by their correspondences revealing the sequence of things to the trained observer- for every form of divination turns upon correspondences. Universal interdependence, there could not be, but universal resemblance there must. This probably is the meaning of the saying that Correspondences maintain the Universe.

This is a correspondence of inferior with inferior, of superior with superior, eye with eye, foot with foot, everything with its fellow and, in another order, virtue with right action and vice with unrighteousness. Admit such correspondence in the All and we have the possibility of prediction. If the one order acts on the other, the relation is not that of maker to thing made- the two are coeval- it is the interplay of members of one living being; each in its own place and way moves as its own nature demands; to every organ its grade and task, and to every grade and task its effective organ.

7. And since the higher exists, there must be the lower as well. The Universe is a thing of variety, and how could there be an inferior without a superior or a superior without an inferior? We cannot complain about the lower in the higher; rather, we must be grateful to the higher for giving something of itself to the lower.

In a word, those that would like evil driven out from the All would drive out Providence itself.

What would Providence have to provide for? Certainly not for itself or for the Good: when we speak of a Providence above, we mean an act upon something below.

That which resumes all under a unity is a Principle in which all things exist together and the single thing is All. From this Principle, which remains internally unmoved, particular things push forth as from a single root which never itself emerges. They are a branching into part, into multiplicity, each single outgrowth bearing its trace of the common source. Thus, phase by phase, there is finally the production into this world; some things close still to the root, others widely separate in the continuous progression until we have, in our metaphor, bough and crest, foliage and fruit. At the one side all is one point of unbroken rest, on the other is the ceaseless process, leaf and fruit, all the things of process carrying ever within themselves the Reason-Principles of the Upper Sphere, and striving to become trees in their own minor order and producing, if at all, only what is in strict gradation from themselves.

As for the abandoned spaces in what corresponds to the branches these two draw upon the root, from which, despite all their variance, they also derive; and the branches again operate upon their own furthest extremities: operation is to be traced only from point to next point, but, in the fact, there has been both inflow and outgo [of creative or modifying force] at the very root which, itself again, has its priors.

The things that act upon each other are branchings from a far-off beginning and so stand distinct; but they derive initially from the one source: all interaction is like that of brothers, resemblant as drawing life from the same parents.

FOURTH TRACTATE.

OUR TUTELARY SPIRIT.

1. Some Existents [Absolute Unity and Intellectual-Principle] remain at rest while their Hypostases, or Expressed-Idea, come into being; but, in our view, the Soul generates by its motion, to which is due the sensitive faculty- that in any of its expression-forms- Nature and all forms of life down to the vegetable order. Even as it is present in human beings the Soul carries its Expression-form [Hypostasis] with it, but is not the dominant since it is not the whole man (humanity including the Intellectual Principal, as well): in the vegetable order it is the highest since there is nothing to rival it; but at this phase it is no longer reproductive, or, at least, what it produces is of quite another order; here life ceases; all later production is lifeless.

What does this imply?

Everything the Soul engenders down to this point comes into being shapeless, and takes form by orientation towards its author and supporter: therefore the thing engendered on the further side can be no image of the Soul, since it is not even alive; it must be an utter Indetermination. No doubt even in things of the nearer order there was indetermination, but within a form; they were undetermined not utterly but only in contrast with their perfect state: at this extreme point we have the utter lack of determination. Let it be raised to its highest degree and it becomes body by taking such shape as serves its scope; then it becomes the recipient of its author and sustainer: this presence in body is the only example of the boundaries of Higher Existents running into the boundary of the Lower.

2. It is of this Soul especially that we read "All Soul has care for the Soulless"- though the several Souls thus care in their own degree and way. The passage continues- "Soul passes through the entire heavens in forms varying with the variety of place"- the sensitive form, the reasoning form, even the vegetative form- and this means that in each "place" the phase of the soul there dominant carries out its own ends while the rest, not present there, is idle.

Now, in humanity the lower is not supreme; it is an accompaniment; but neither does the better rule unfaithfully; the lower element also has a footing, and Man, therefore, lives in part under sensation, for he has the organs of sensation, and in large part even by the merely vegetative principle, for the body grows and propagates: all the graded phases are in a collaboration, but the entire form, man, takes rank by the dominant, and when the life-principle leaves the body it is what it is, what it most intensely lived.

This is why we must break away towards the High: we dare not keep ourselves set towards the sensuous principle, following the images of sense, or towards the merely vegetative, intent upon the gratifications of eating and procreation; our life must be pointed towards the Intellective, towards the Intellectual-Principle, towards God.

Those that have maintained the human level are men once more. Those that have lived wholly to sense become animals- corresponding in species to the particular temper of the life- ferocious animals where the sensuality has been accompanied by a certain measure of spirit, gluttonous and lascivious animals where all has been appetite and satiation of appetite. Those who in their pleasures have not even lived by sensation, but have gone their way in a torpid grossness become mere growing things, for this lethargy is the entire act of the vegetative, and such men have been busy be-treering themselves. Those, we read, that, otherwise untainted, have loved song become vocal animals; kings ruling unreasonably but with no other vice are eagles; futile and flighty visionaries ever soaring skyward, become highflying birds; observance of civic and secular virtue makes man again, or where the merit is less marked, one of the animals of communal tendency, a bee or the like.

3. What, then, is the spirit [guiding the present life and determining the future]?

The Spirit of here and now.

And the God?

The God of here and now.

Spirit, God; This in act within us, conducts every life; for, even here and now, it is the dominant of our Nature.

That is to say that the dominant is the spirit which takes possession of the human being at birth?

No: the dominant is the Prior of the individual spirit; it presides inoperative while its secondary acts: so that if the acting force is that of men of the sense-life, the tutelary spirit is the Rational Being, while if we live by that Rational Being, our tutelary Spirit is the still higher Being, not directly operative but assenting to the working principle. The words "You shall yourselves choose" are true, then; for by our life we elect our own loftier.

But how does this spirit come to be the determinant of our fate?

It is not when the life is ended that it conducts us here or there; it operates during the lifetime; when we cease to live, our death hands over to another principle this energy of our own personal career.

That principle [of the new birth] strives to gain control, and if it succeeds it also lives and itself, in turn, possesses a guiding spirit [its next higher]: if on the contrary it is weighed down by the developed evil in the character, the spirit of the previous life pays the penalty: the evil-liver loses grade because during his life the active principle of his being took the tilt towards the brute by force of affinity. If, on the contrary, the Man is able to follow the leading of his higher Spirit, he rises: he lives that Spirit; that noblest part of himself to which he is being led becomes sovereign in his life; this made his own, he works for the next above until he has attained the height.

For the Soul is many things, is all, is the Above and the Beneath to the totality of life: and each of us is an Intellectual Kosmos, linked to this world by what is lowest in us, but, by what is the highest, to the Divine Intellect: by all that is intellective we are permanently in that higher realm, but at the fringe of the Intellectual we are fettered to the lower; it is as if we gave forth from it some emanation towards that lower, or, rather some Act, which however leaves our diviner part not in itself diminished.

4. But is this lower extremity of our intellective phase fettered to body for ever?

No: if we turn, this turns by the same act.

And the Soul of the All- are we to think that when it turns from this sphere its lower phase similarly withdraws?

No: for it never accompanied that lower phase of itself; it never knew any coming, and therefore never came down; it remains unmoved above, and the material frame of the Universe draws close to it, and, as it were, takes light from it, no hindrance to it, in no way troubling it, simply lying unmoved before it.

But has the Universe, then, no sensation? "It has no Sight," we read, since it has no eyes, and obviously it has not ears, nostrils, or tongue. Then has it perhaps such a consciousness as we have of our own inner conditions?

No: where all is the working out of one nature, there is nothing but still rest; there is not even enjoyment. Sensibility is present as the quality of growth is, unrecognized. But the Nature of the World will be found treated elsewhere; what stands here is all that the question of the moment demands.

5. But if the presiding Spirit and the conditions of life are chosen by the Soul in the overworld, how can anything be left to our independent action here?

The answer is that very choice in the over-world is merely an allegorical statement of the Soul's tendency and temperament, a total character which it must express wherever it operates.

But if the tendency of the Soul is the master-force and, in the Soul, the dominant is that phase which has been brought to the fore by a previous history, then the body stands acquitted of any bad influence upon it? The Soul's quality exists before any bodily life; it has exactly what it chose to have; and, we read, it never changes its chosen spirit; therefore neither the good man nor the bad is the product of this life?

Is the solution, perhaps, that man is potentially both good and bad but becomes the one or the other by force of act?

But what if a man temperamentally good happens to enter a disordered body, or if a perfect body falls to a man naturally vicious?

The answer is that the Soul, to whichever side it inclines, has in some varying degree the power of working the forms of body over to its own temper, since outlying and accidental circumstances cannot overrule the entire decision of a Soul. Where we read that, after the casting of lots, the sample lives are exhibited with the casual circumstances attending them and that the choice is made upon vision, in accordance with the individual temperament, we are given to understand that the real determination lies with the Souls, who adapt the allotted conditions to their own particular quality.

The Timaeus indicates the relation of this guiding spirit to ourselves: it is not entirely outside of ourselves; is not bound up with our nature; is not the agent in our action; it belongs to us as belonging to our Soul, but not in so far as we are particular human beings living a life to which it is superior: take the passage in this sense and it is consistent; understand this Spirit otherwise and there is contradiction. And the

description of the Spirit, moreover, as “the power which consummates the chosen life,” is, also, in agreement with this interpretation; for while its presidency saves us from falling much deeper into evil, the only direct agent within us is some thing neither above it nor equal to it but under it: Man cannot cease to be characteristically Man.

6. What, then, is the achieved Sage?

One whose Act is determined by the higher phase of the Soul.

It does not suffice to perfect virtue to have only this Spirit [equivalent in all men] as cooperator in the life: the acting force in the Sage is the Intellective Principle [the diviner phase of the human Soul] which therefore is itself his presiding spirit or is guided by a presiding spirit of its own, no other than the very Divinity.

But this exalts the Sage above the Intellectual Principle as possessing for presiding spirit the Prior to the Intellectual Principle: how then does it come about that he was not, from the very beginning, all that he now is?

The failure is due to the disturbance caused by birth- though, before all reasoning, there exists the instinctive movement reaching out towards its own.

On instinct which the Sage finally rectifies in every respect?

Not in every respect: the Soul is so constituted that its life-history and its general tendency will answer not merely to its own nature but also to the conditions among which it acts.

The presiding Spirit, as we read, conducting a Soul to the Underworld ceases to be its guardian- except when the Soul resumes [in its later choice] the former state of life.

But, meanwhile, what happens to it?

From the passage [in the *Phaedo*] which tells how it presents the Soul to judgement we gather that after the death it resumes the form it had before the birth, but that then, beginning again, it is present to the Souls in their punishment during the period of their renewed life- a time not so much of living as of expiation.

But the Souls that enter into brute bodies, are they controlled by some thing less than this presiding Spirit? No: theirs is still a Spirit, but an evil or a foolish one.

And the Souls that attain to the highest?

Of these higher Souls some live in the world of Sense, some above it: and those in the world of Sense inhabit the Sun or another of the planetary bodies; the others occupy the fixed Sphere [above the planetary] holding the place they have merited through having lived here the superior life of reason.

We must understand that, while our Souls do contain an Intellectual Kosmos they also contain a subordination of various forms like that of the Kosmic Soul. The world Soul is distributed so as to produce the fixed sphere and the planetary circuits corresponding to its graded powers: so with our Souls; they must have their provinces according to their different powers, parallel to those of the World Soul: each must give out its own special act; released, each will inhabit there a star consonant with the temperament and faculty in act within and constituting the principle of the life; and this star or the next highest power will stand to them as God or more exactly as tutelary spirit.

But here some further precision is needed.

Emancipated Souls, for the whole period of their sojourn there above, have transcended the Spirit-nature and the entire fatality of birth and all that belongs to this visible world, for they have taken up with them that Hypostasis of the Soul in which the desire of earthly life is vested. This Hypostasis may be described as the distributable Soul, for it is what enters bodily forms and multiplies itself by this division among them. But its distribution is not a matter of magnitudes; wherever it is present, there is the same thing present entire; its unity can always be reconstructed: when living things- animal or vegetal- produce their constant succession of new forms, they do so in virtue of the self-distribution of this phase of the Soul, for it must be as much distributed among the new forms as the propagating originals are. In some cases it communicates its force by permanent presence the life principle in plants for instance- in other cases it withdraws after imparting its virtue- for instance where from the putridity of dead animal or vegetable matter a multitudinous birth is produced from one organism.

A power corresponding to this in the All must reach down and co-operate in the life of our world- in fact the very same power.

If the Soul returns to this Sphere it finds itself under the same Spirit or a new, according to the life it is to live. With this Spirit it embarks in the skiff of the universe: the "spindle of Necessity" then takes control and appoints the seat for the voyage, the seat of the lot in life.

The Universal circuit is like a breeze, and the voyager, still or stirring, is carried forward by it. He has a hundred varied experiences, fresh sights, changing circumstances, all sorts of events. The vessel itself furnishes incident, tossing as it drives on. And the voyager also acts of himself in virtue of that individuality which he retains because he is on the vessel in his own person and character. Under identical circumstances individuals answer very differently in their movements and acts: hence it comes about that, be the occurrences and conditions of life similar or dissimilar, the result may differ from man to man, as on the other hand a similar result may be produced by dissimilar conditions: this (personal answer to incident) it is that constitutes destiny.

FIFTH TRACTATE.

ON LOVE.

1. What is Love? A God, a Celestial Spirit, a state of mind? Or is it, perhaps, sometimes to be thought of as a God or Spirit and sometimes merely as an experience? And what is it essentially in each of these respects?

These important questions make it desirable to review prevailing opinions on the matter, the philosophical treatment it has received and, especially, the theories of the great Plato who has many passages dealing with Love, from a point of view entirely his own.

Plato does not treat of it as simply a state observed in Souls; he also makes it a Spirit-being so that we read of the birth of Eros, under definite circumstances and by a certain parentage.

Now everyone recognizes that the emotional state for which we make this "Love" responsible rises in souls aspiring to be knit in the closest union with some beautiful object, and that this aspiration takes two forms, that of the good whose devotion is for beauty itself, and that other which seeks its consummation in some vile act. But this generally admitted distinction opens a new question: we need a philosophical investigation into the origin of the two phases.

It is sound, I think, to find the primal source of Love in a tendency of the Soul towards pure beauty, in a recognition, in a kinship, in an unreasoned consciousness of friendly relation. The vile and ugly is in clash, at once, with Nature and with God: Nature produces by looking to the Good, for it looks towards Order- which has its being in the consistent total of the good, while the unordered is ugly, a member of the system of evil- and besides Nature itself, clearly, springs from the divine realm, from Good and Beauty; and when anything brings delight and the sense of kinship, its very image attracts.

Reject this explanation, and no one can tell how the mental state rises and where are its causes: it is the explanation of even copulative love which is the will to beget in beauty; Nature seeks to produce the beautiful and therefore by all reason cannot desire to procreate in the ugly.

Those that desire earthly procreation are satisfied with the beauty found on earth, the beauty of image and of body; it is because they are strangers to the Archetype, the source of even the attraction they feel towards what is lovely here. There are Souls to whom earthly beauty is a leading to the memory of that in the higher realm and these love the earthly as an image; those that have not attained to this memory do not understand what is happening within them, and take the image for the reality. Once there is perfect self-control, it is no fault to enjoy the beauty of earth; where appreciation degenerates into carnality, there is sin.

Pure Love seeks the beauty alone, whether there is Reminiscence or not; but there are those that feel, also, a desire of such immortality as lies within mortal reach; and these are seeking Beauty in their demand for perpetuity, the desire of the eternal; Nature teaches them to sow the seed and to beget in beauty, to sow towards eternity, but in beauty through their own kinship with the beautiful. And indeed the eternal is of the one stock with the beautiful, the Eternal-Nature is the first shaping of beauty and makes

beautiful all that rises from it.

The less the desire for procreation, the greater is the contentment with beauty alone, yet procreation aims at the engendering of beauty; it is the expression of a lack; the subject is conscious of insufficiency and, wishing to produce beauty, feels that the way is to beget in a beautiful form. Where the procreative desire is lawless or against the purposes of nature, the first inspiration has been natural, but they have diverged from the way, they have slipped and fallen, and they grovel; they neither understand whither Love sought to lead them nor have they any instinct to production; they have not mastered the right use of the images of beauty; they do not know what the Authentic Beauty is.

Those that love beauty of person without carnal desire love for beauty's sake; those that have- for women, of course- the copulative love, have the further purpose of self-perpetuation: as long as they are led by these motives, both are on the right path, though the first have taken the nobler way. But, even in the right, there is the difference that the one set, worshipping the beauty of earth, look no further, while the others, those of recollection, venerate also the beauty of the other world while they, still, have no contempt for this in which they recognize, as it were, a last outgrowth, an attenuation of the higher. These, in sum, are innocent frequenters of beauty, not to be confused with the class to whom it becomes an occasion of fall into the ugly- for the aspiration towards a good degenerates into an evil often.

So much for love, the state.

Now we have to consider Love, the God.

2. The existence of such a being is no demand of the ordinary man, merely; it is supported by Theologians and, over and over again, by Plato to whom Eros is child of Aphrodite, minister of beautiful children, inciter of human souls towards the supernal beauty or quickener of an already existing impulse thither. All this requires philosophical examination. A cardinal passage is that in the Symposium where we are told Eros was not a child of Aphrodite but born on the day of Aphrodite's birth, Penia, Poverty, being the mother, and Poros, Possession, the father.

The matter seems to demand some discussion of Aphrodite, since in any case Eros is described as being either her son or in some association with her. Who then is Aphrodite, and in what sense is Love either her child or born with her or in some way both her child and her birth-fellow?

To us Aphrodite is twofold; there is the heavenly Aphrodite, daughter of Ouranos or Heaven: and there is the other the daughter of Zeus and Dione, this is the Aphrodite who presides over earthly unions; the higher was not born of a mother and has no part in marriages for in Heaven there is no marrying.

The Heavenly Aphrodite, daughter of Kronos who is no other than the Intellectual Principle- must be the Soul at its divinest: unmingled as the immediate emanation of the

unmingled; remaining ever Above, as neither desirous nor capable of descending to this sphere, never having developed the downward tendency, a divine Hypostasis essentially aloof, so unreservedly an Authentic Being as to have no part with Matter- and therefore mythically “the unmothered” justly called not Celestial Spirit but God, as knowing no admixture, gathered cleanly within itself.

Any Nature springing directly from the Intellectual Principle must be itself also a clean thing: it will derive a resistance of its own from its nearness to the Highest, for all its tendency, no less than its fixity, centres upon its author whose power is certainly sufficient to maintain it Above.

Soul then could never fall from its sphere; it is closer held to the divine Mind than the very sun could hold the light it gives forth to radiate about it, an outpouring from itself held firmly to it, still.

But following upon Kronos- or, if you will, upon Heaven, the father of Kronos- the Soul directs its Act towards him and holds closely to him and in that love brings forth the Eros through whom it continues to look towards him. This Act of the Soul has produced an Hypostasis, a Real-Being; and the mother and this Hypostasis- her offspring, noble Love gaze together upon Divine Mind. Love, thus, is ever intent upon that other loveliness, and exists to be the medium between desire and that object of desire. It is the eye of the desirer; by its power what loves is enabled to see the loved thing. But it is first; before it becomes the vehicle of vision, it is itself filled with the sight; it is first, therefore, and not even in the same order- for desire attains to vision only through the efficacy of Love, while Love, in its own Act, harvests the spectacle of beauty playing immediately above it.

3. That Love is a Hypostasis [a “Person”] a Real-Being sprung from a Real-Being- lower than the parent but authentically existent- is beyond doubt.

For the parent-Soul was a Real-Being sprung directly from the Act of the Hypostasis that ranks before it: it had life; it was a constituent in the Real-Being of all that authentically is- in the Real-Being which looks, rapt, towards the very Highest. That was the first object of its vision; it looked towards it as towards its good, and it rejoiced in the looking; and the quality of what it saw was such that the contemplation could not be void of effect; in virtue of that rapture, of its position in regard to its object, of the intensity of its gaze, the Soul conceived and brought forth an offspring worthy of itself and of the vision. Thus; there is a strenuous activity of contemplation in the Soul; there is an emanation towards it from the object contemplated; and Eros is born, the Love which is an eye filled with its vision, a seeing that bears its image with it; Eros taking its name, probably, from the fact that its essential being is due to this horasis, this seeing. Of course Love, as an emotion, will take its name from Love, the Person, since a Real-Being cannot but be prior to what lacks this reality. The mental state will be designated as Love, like the Hypostasis, though it is no more than a particular act directed towards a particular object; but it must not be confused with the Absolute Love, the Divine Being. The Eros that belongs to the supernal Soul must be of one temper with it; it must itself look aloft as being of the household of that Soul, dependent upon

that Soul, its very offspring; and therefore caring for nothing but the contemplation of the Gods.

Once that Soul which is the primal source of light to the heavens is recognized as an Hypostasis standing distinct and aloof it must be admitted that Love too is distinct and aloof though not, perhaps, so loftily celestial a being as the Soul. Our own best we conceive as inside ourselves and yet something apart; so, we must think of this Love- as essentially resident where the unmingling Soul inhabits.

But besides this purest Soul, there must be also a Soul of the All: at once there is another Love- the eye with which this second Soul looks upwards- like the supernal Eros engendered by force of desire. This Aphrodite, the secondary Soul, is of this Universe- not Soul unmingled alone, not Soul, the Absolute, giving birth, therefore, to the Love concerned with the universal life; no, this is the Love presiding over marriages; but it, also, has its touch of the upward desire; and, in the degree of that striving, it stirs and leads upwards the Souls of the young and every Soul with which it is incorporated in so far as there is a natural tendency to remembrance of the divine. For every Soul is striving towards The Good, even the mingling Soul and that of particular beings, for each holds directly from the divine Soul, and is its offspring.

4. Does each individual Soul, then, contain within itself such a Love in essence and substantial reality?

Since not only the pure All-Soul but also that of the Universe contain such a Love, it would be difficult to explain why our personal Soul should not. It must be so, even, with all that has life.

This indwelling love is no other than the Spirit which, as we are told, walks with every being, the affection dominant in each several nature. It implants the characteristic desire; the particular Soul, strained towards its own natural objects, brings forth its own Eros, the guiding spirit realizing its worth and the quality of its Being.

As the All-Soul contains the Universal Love, so must the single Soul be allowed its own single Love: and as closely as the single Soul holds to the All-Soul, never cut off but embraced within it, the two together constituting one principle of life, so the single separate Love holds to the All-Love. Similarly, the individual love keeps with the individual Soul as that other, the great Love, goes with the All-Soul; and the Love within the All permeates it throughout so that the one Love becomes many, showing itself where it chooses at any moment of the Universe, taking definite shape in these its partial phases and revealing itself at its will.

In the same way we must conceive many Aphrodites in the All, Spirits entering it together with Love, all emanating from an Aphrodite of the All, a train of particular Aphrodites dependent upon the first, and each with the particular Love in attendance: this multiplicity cannot be denied, if Soul be the mother of Love, and Aphrodite mean Soul, and Love be an act of a Soul seeking good.

This Love, then, leader of particular Souls to The Good, is twofold: the Love in the loftier Soul would be a god ever linking the Soul to the divine; the Love in the mingling Soul will be a celestial spirit.

5. But what is the Nature of this Spirit- of the Supernals in general?

The Spirit-Kind is treated in the Symposium where, with much about the others, we learn of Eros- Love- born to Penia- Poverty- and Poros- Possession- who is son of Metis- Resource- at Aphrodite's birth feast.

But to take Plato as meaning, by Eros, this Universe- and not simply the Love native within it- involves much that is self-contradictory.

For one thing, the universe is described as a blissful god and as self-sufficing, while this "Love" is confessedly neither divine nor self-sufficing but in ceaseless need.

Again, this Kosmos is a compound of body and soul; but Aphrodite to Plato is the Soul itself, therefore Aphrodite would necessarily- be a constituent part of Eros, dominant member! A man is the man's Soul, if the world is, similarly, the world's Soul, then Aphrodite, the Soul, is identical with Love, the Kosmos! And why should this one spirit, Love, be the Universe to the exclusion of all the others, which certainly are sprung from the same Essential-Being? Our only escape would be to make the Kosmos a complex of Supernals.

Love, again, is called the Dispenser of beautiful children: does this apply to the Universe? Love is represented as homeless, bedless and barefooted: would not that be a shabby description of the Kosmos and quite out of the truth?

6. What then, in sum, is to be thought of Love and of his "birth" as we are told of it?

Clearly we have to establish the significance, here, of Poverty and Possession, and show in what way the parentage is appropriate: we have also to bring these two into line with the other Supernals since one spirit nature, one spirit essence, must characterize all unless they are to have merely a name in common.

We must, therefore, lay down the grounds on which we distinguish the Gods from the Celestials- that is, when we emphasize the separate nature of the two orders and are not, as often in practice, including these Spirits under the common name of Gods.

It is our teaching and conviction that the Gods are immune to all passion while we attribute experience and emotion to the Celestials which, though eternal Beings and directly next to the Gods, are already a step towards ourselves and stand between the divine and the human.

But by what process was the immunity lost? What in their nature led them downwards to the inferior?

And other questions present themselves.

Does the Intellectual Realm include no member of this spirit order, not even one? And does the Kosmos contain only these spirits, God being confined to the Intellectual? Or are there Gods in the sub-celestial too, the Kosmos itself being a God, the third, as is commonly said, and the Powers down to the Moon being all Gods as well?

It is best not to use the word "Celestial" of any Being of that Realm; the word "God" may be applied to the Essential-Celestial- the autodaimon- and even to the Visible Powers of the Universe of Sense down to the Moon; Gods, these too, visible, secondary, sequent upon the Gods of the Intellectual Realm, consonant with Them, held about Them, as the radiance about the star.

What, then, are these spirits?

A Celestial is the representative generated by each Soul when it enters the Kosmos.

And why, by a Soul entering the Kosmos?

Because Soul pure of the Kosmos generates not a Celestial Spirit but a God; hence it is that we have spoken of Love, offspring of Aphrodite the Pure Soul, as a God.

But, first what prevents every one of the Celestials from being an Eros, a Love? And why are they not untouched by Matter like the Gods?

On the first question: Every Celestial born in the striving of the Soul towards the good and beautiful is an Eros; and all the Souls within the Kosmos do engender this Celestial; but other Spirit-Beings, equally born from the Soul of the All, but by other faculties of that Soul, have other functions: they are for the direct service of the All, and administer particular things to the purpose of the Universe entire. The Soul of the All must be adequate to all that is and therefore must bring into being spirit powers serviceable not merely in one function but to its entire charge.

But what participation can the Celestials have in Matter, and in what Matter?

Certainly none in bodily Matter; that would make them simply living things of the order of sense. And if, even, they are to invest themselves in bodies of air or of fire, the nature must have already been altered before they could have any contact with the corporeal. The Pure does not mix, unmediated, with body- though many think that the Celestial-Kind, of its very essence, comports a body aerial or of fire.

But why should one order of Celestial descend to body and another not? The difference implies the existence of some cause or medium working upon such as thus descend. What would constitute such a medium?

We are forced to assume that there is a Matter of the Intellectual Order, and that Beings partaking of it are thereby enabled to enter into the lower Matter, the corporeal.

7. This is the significance of Plato's account of the birth of Love.

The drunkenness of the father Poros or Possession is caused by Nectar, "wine yet not existing"; Love is born before the realm of sense has come into being: Penia had participation in the Intellectual before the lower image of that divine Realm had appeared; she dwelt in that Sphere, but as a mingled being consisting partly of Form but partly also of that indetermination which belongs to the Soul before she attains the Good and when all her knowledge of Reality is a fore-intimation veiled by the indeterminate and unordered: in this state Poverty brings forth the Hypostasis, Love.

This, then, is a union of Reason with something that is not Reason but a mere indeterminate striving in a being not yet illuminated: the offspring Love, therefore, is not perfect, not self-sufficient, but unfinished, bearing the signs of its parentage, the undirected striving and the self-sufficient Reason. This offspring is a Reason-Principle but not purely so; for it includes within itself an aspiration ill-defined, unreasoned, unlimited- it can never be sated as long as it contains within itself that element of the Indeterminate. Love, then, clings to the Soul, from which it sprung as from the principle of its Being, but it is lessened by including an element of the Reason-Principle which did not remain self-concentrated but blended with the indeterminate, not, it is true, by immediate contact but through its emanation. Love, therefore, is like a goad; it is without resource in itself; even winning its end, it is poor again.

It cannot be satisfied because a thing of mixture never can be so: true satisfaction is only for what has its plenitude in its own being; where craving is due to an inborn deficiency, there may be satisfaction at some given moment but it does not last. Love, then, has on the one side the powerlessness of its native inadequacy, on the other the resource inherited from the Reason-Kind.

Such must be the nature and such the origin of the entire Spirit Order, each- like its fellow, Love- has its appointed sphere, is powerful there, and wholly devoted to it, and, like Love, none is ever complete of itself but always straining towards some good which it sees in things of the partial sphere.

We understand, now, why good men have no other Love other Eros of life- than that for the Absolute and Authentic Good, and never follow the random attractions known to those ranged under the lower Spirit Kind.

Each human being is set under his own Spirit-Guides, but this is mere blank possession when they ignore their own and live by some other spirit adopted by them as more closely attuned to the operative part of the Soul in them. Those that go after evil are natures that have merged all the Love-Principles within them in the evil desires springing in their hearts and allowed the right reason, which belongs to our kind, to fall under the spell of false ideas from another source.

All the natural Loves, all that serve the ends of Nature, are good; in a lesser Soul, inferior in rank and in scope; in the greater Soul, superior; but all belong to the order of

Being. Those forms of Love that do not serve the purposes of Nature are merely accidents attending on perversion: in no sense are they Real-Beings or even manifestations of any Reality; for they are no true issue of Soul; they are merely accompaniments of a spiritual flaw which the Soul automatically exhibits in the total of disposition and conduct.

In a word; all that is truly good in a Soul acting to the purposes of nature and within its appointed order, all this is Real-Being: anything else is alien, no act of the Soul, but merely something that happens to it: a parallel may be found in false mentation, notions behind which there is no reality as there is in the case of authentic ideas, the eternal, the strictly defined, in which there is at once an act of true knowing, a truly knowable object and authentic existence- and this not merely in the Absolute, but also in the particular being that is occupied by the authentically knowable and by the Intellectual-Principle manifest in every several form.

In each particular human being we must admit the existence of the authentic Intellective Act and of the authentically knowable object- though not as wholly merged into our being, since we are not these in the absolute and not exclusively these- and hence our longing for absolute things: it is the expression of our intellective activities: if we sometimes care for the partial, that affection is not direct but accidental, like our knowledge that a given triangular figure is made up of two right angles because the absolute triangle is so.

8. But what are we to understand by this Zeus with the garden into which, we are told, Poros or Wealth entered? And what is the garden?

We have seen that the Aphrodite of the Myth is the Soul and that Poros, Wealth, is the Reason-Principle of the Universe: we have still to explain Zeus and his garden.

We cannot take Zeus to be the Soul, which we have agreed is represented by Aphrodite.

Plato, who must be our guide in this question, speaks in the Phaedrus of this God, Zeus, as the Great Leader- though elsewhere he seems to rank him as one of three- but in the Philebus he speaks more plainly when he says that there is in Zeus not only a royal Soul, but also a royal Intellect.

As a mighty Intellect and Soul, he must be a principle of Cause; he must be the highest for several reasons but especially because to be King and Leader is to be the chief cause: Zeus then is the Intellectual Principle. Aphrodite, his daughter, issue of him, dwelling with him, will be Soul, her very name Aphrodite [= the habra, delicate] indicating the beauty and gleam and innocence and delicate grace of the Soul.

And if we take the male gods to represent the Intellectual Powers and the female gods to be their souls- to every Intellectual Principle its companion Soul- we are forced, thus also, to make Aphrodite the Soul of Zeus; and the identification is confirmed by Priests and Theologians who consider Aphrodite and Hera one and the same and call

Aphrodite's star the star of Hera.

9. This Poros, Possession, then, is the Reason-Principle of all that exists in the Intellectual Realm and in the supreme Intellect; but being more diffused, kneaded out as it were, it must touch Soul, be in Soul, [as the next lower principle].

For, all that lies gathered in the Intellect is native to it: nothing enters from without; but "Poros intoxicated" is some Power deriving satisfaction outside itself: what, then, can we understand by this member of the Supreme filled with Nectar but a Reason-Principle falling from a loftier essence to a lower? This means that the Reason-Principle upon "the birth of Aphrodite" left the Intellectual for the Soul, breaking into the garden of Zeus.

A garden is a place of beauty and a glory of wealth: all the loveliness that Zeus maintains takes its splendour from the Reason-Principle within him; for all this beauty is the radiation of the Divine Intellect upon the Divine Soul, which it has penetrated. What could the Garden of Zeus indicate but the images of his Being and the splendours of his glory? And what could these divine splendours and beauties be but the Ideas streaming from him?

These Reason-Principles- this Poros who is the lavishness, the abundance of Beauty- are at one and are made manifest; this is the Nectar-drunkenness. For the Nectar of the gods can be no other than what the god-nature essentially demands; and this is the Reason pouring down from the divine Mind.

The Intellectual Principle possesses Itself to satiety, but there is no "drunken" abandonment in this possession which brings nothing alien to it. But the Reason-Principle- as its offspring, a later hypostasis- is already a separate Being and established in another Realm, and so is said to lie in the garden of this Zeus who is divine Mind; and this lying in the garden takes place at the moment when, in our way of speaking, Aphrodite enters the realm of Being.

10. "Our way of speaking"- for myths, if they are to serve their purpose, must necessarily import time-distinctions into their subject and will often present as separate, Powers which exist in unity but differ in rank and faculty; they will relate the births of the unbegotten and discriminate where all is one substance; the truth is conveyed in the only manner possible, it is left to our good sense to bring all together again.

On this principle we have, here, Soul dwelling with the divine Intelligence, breaking away from it, and yet again being filled to satiety with the divine Ideas- the beautiful abounding in all plenty, so that every splendour become manifest in it with the images of whatever is lovely- Soul which, taken as one all, is Aphrodite, while in it may be distinguished the Reason-Principles summed under the names of Plenty and Possession, produced by the downflow of the Nectar of the over realm. The splendours contained in Soul are thought of as the garden of Zeus with reference to their existing within Life; and Poros sleeps in this garden in the sense of being sated and heavy with its produce. Life is eternally manifest, an eternal existent among the existences, and the banqueting of the gods means no more than that they have their Being in that vital

blessedness. And Love- “born at the banquet of the gods”- has of necessity been eternally in existence, for it springs from the intention of the Soul towards its Best, towards the Good; as long as Soul has been, Love has been.

Still this Love is of mixed quality. On the one hand there is in it the lack which keeps it craving; on the other, it is not entirely destitute; the deficient seeks more of what it has, and certainly nothing absolutely void of good would ever go seeking the good.

It is said then to spring from Poverty and Possession in the sense that Lack and Aspiration and the Memory of the Ideal Principles, all present together in the Soul, produce that Act towards The Good which is Love. Its Mother is Poverty, since striving is for the needy; and this Poverty is Matter, for Matter is the wholly poor: the very ambition towards the good is a sign of existing indetermination; there is a lack of shape and of Reason in that which must aspire towards the Good, and the greater degree of effort implies the lower depth of materiality. A thing aspiring towards the Good is an Ideal-principle only when the striving [with attainment] will leave it still unchanged in Kind: when it must take in something other than itself, its aspiration is the presentment of Matter to the incoming power.

Thus Love is at once, in some degree a thing of Matter and at the same time a Celestial, sprung of the Soul; for Love lacks its Good but, from its very birth, strives towards It.

SIXTH TRACTATE.

THE IMPASSIVITY OF THE UNEMBODIED.

1. In our theory, feelings are not states; they are action upon experience, action accompanied by judgement: the states, we hold, are seated elsewhere; they may be referred to the vitalized body; the judgement resides in the Soul, and is distinct from the state- for, if it is not distinct, another judgement is demanded, one that is distinct, and, so, we may be sent back for ever.

Still, this leaves it undecided whether in the act of judgement the judging faculty does or does not take to itself something of its object.

If the judging faculty does actually receive an imprint, then it partakes of the state- though what are called the Impressions may be of quite another nature than is supposed; they may be like Thought, that is to say they may be acts rather than states; there may be, here too, awareness without participation.

For ourselves, it could never be in our system- or in our liking- to bring the Soul down to participation in such modes and modifications as the warmth and cold of material frames.

What is known as the Impressionable faculty of the soul- to pathetikon- would need to be identified: we must satisfy ourselves as to whether this too, like the Soul as a unity, is

to be classed as immune or, on the contrary, as precisely the only part susceptible of being affected; this question, however, may be held over; we proceed to examine its preliminaries.

Even in the superior phase of the Soul- that which precedes the impressionable faculty and any sensation- how can we reconcile immunity with the indwelling of vice, false notions, ignorance? Inviolability; and yet likings and dislikings, the Soul enjoying, grieving, angry, grudging, envying, desiring, never at peace but stirring and shifting with everything that confronts it!

If the Soul were material and had magnitude, it would be difficult, indeed quite impossible, to make it appear to be immune, unchangeable, when any of such emotions lodge in it. And even considering it as an Authentic Being, devoid of magnitude and necessarily indestructible, we must be very careful how we attribute any such experiences to it or we will find ourselves unconsciously making it subject to dissolution. If its essence is a Number or as we hold a Reason-Principle, under neither head could it be susceptible of feeling. We can think, only, that it entertains unreasoned reasons and experiences unexperienced, all transmuted from the material frames, foreign and recognized only by parallel, so that it possesses in a kind of non-possession and knows affection without being affected. How this can be demands enquiry.

2. Let us begin with virtue and vice in the Soul. What has really occurred when, as we say, vice is present? In speaking of extirpating evil and implanting goodness, of introducing order and beauty to replace a former ugliness, we talk in terms of real things in the Soul.

Now when we make virtue a harmony, and vice a breach of harmony, we accept an opinion approved by the ancients; and the theory helps us decidedly to our solution. For if virtue is simply a natural concordance among the phases of the Soul, and vice simply a discord, then there is no further question of any foreign presence; harmony would be the result of every distinct phase or faculty joining in, true to itself; discord would mean that not all chimed in at their best and truest. Consider, for example, the performers in a choral dance; they sing together though each one has his particular part, and sometimes one voice is heard while the others are silent; and each brings to the chorus something of his own; it is not enough that all lift their voices together; each must sing, choicely, his own part to the music set for him. Exactly so in the case of the Soul; there will be harmony when each faculty performs its appropriate part.

Yes: but this very harmony constituting the virtue of the Soul must depend upon a previous virtue, that of each several faculty within itself; and before there can be the vice of discord there must be the vice of the single parts, and these can be bad only by the actual presence of vice as they can be good only by the presence of virtue. It is true that no presence is affirmed when vice is identified with ignorance in the reasoning faculty of the Soul; ignorance is not a positive thing; but in the presence of false judgements- the main cause of vice- must it not be admitted that something positive has entered into the Soul, something perverting the reasoning faculty? So, the initiative faculty; is it not, itself, altered as one varies between timidity and boldness? And the

desiring faculty, similarly, as it runs wild or accepts control?

Our teaching is that when the particular faculty is sound it performs the reasonable act of its essential nature, obeying the reasoning faculty in it which derives from the Intellectual Principle and communicates to the rest. And this following of reason is not the acceptance of an imposed shape; it is like using the eyes; the Soul sees by its act, that of looking towards reason. The faculty of sight in the performance of its act is essentially what it was when it lay latent; its act is not a change in it, but simply its entering into the relation that belongs to its essential character; it knows- that is, sees- without suffering any change: so, precisely, the reasoning phase of the Soul stands towards the Intellectual Principle; this it sees by its very essence; this vision is its knowing faculty; it takes in no stamp, no impression; all that enters it is the object of vision- possessed, once more, without possession; it possesses by the fact of knowing but “without possession” in the sense that there is no incorporation of anything left behind by the object of vision, like the impression of the seal on sealing-wax.

And note that we do not appeal to stored-up impressions to account for memory: we think of the mind awakening its powers in such a way as to possess something not present to it.

Very good: but is it not different before and after acquiring the memory?

Be it so; but it has suffered no change- unless we are to think of the mere progress from latency to actuality as change- nothing has been introduced into the mind; it has simply achieved the Act dictated by its nature.

It is universally true that the characteristic Act of immaterial entities is performed without any change in them- otherwise they would at last be worn away- theirs is the Act of the unmoving; where act means suffering change, there is Matter: an immaterial Being would have no ground of permanence if its very Act changed it.

Thus in the case of Sight, the seeing faculty is in act but the material organ alone suffers change: judgements are similar to visual experiences.

But how explain the alternation of timidity and daring in the initiative faculty?

Timidity would come by the failure to look towards the Reason-Principle or by looking towards some inferior phase of it or by some defect in the organs of action- some lack or flaw in the bodily equipment- or by outside prevention of the natural act or by the mere absence of adequate stimulus: boldness would arise from the reverse conditions: neither implies any change, or even any experience, in the Soul.

So with the faculty of desire: what we call loose living is caused by its acting unaccompanied; it has done all of itself; the other faculties, whose business it is to make their presence felt in control and to point the right way, have lain in abeyance; the Seer in the Soul was occupied elsewhere, for, though not always at least sometimes, it has leisure for a certain degree of contemplation of other concerns.

Often, moreover, the vice of the desiring faculty will be merely some ill condition of the body, and its virtue, bodily soundness; thus there would again be no question of anything imported into the Soul.

3. But how do we explain likings and aversions? Sorrow, too, and anger and pleasure, desire and fear- are these not changes, affectings, present and stirring within the Soul?

This question cannot be ignored. To deny that changes take place and are intensely felt is in sharp contradiction to obvious facts. But, while we recognize this, we must make very sure what it is that changes. To represent the Soul or Mind as being the seat of these emotions is not far removed from making it blush or turn pale; it is to forget that while the Soul or Mind is the means, the effect takes place in the distinct organism, the animated body.

At the idea of disgrace, the shame is in the Soul; but the body is occupied by the Soul- not to trouble about words- is, at any rate, close to it and very different from soulless matter; and so, is affected in the blood, mobile in its nature. Fear begins in the mind; the pallor is simply the withdrawal of the blood inwards. So in pleasure, the elation is mental, but makes itself felt in the body; the purely mental phase has not reached the point of sensation: the same is true of pain. So desire is ignored in the Soul where the impulse takes its rise; what comes outward thence, the Sensibility knows.

When we speak of the Soul or Mind being moved- as in desire, reasoning, judging- we do not mean that it is driven into its act; these movements are its own acts.

In the same way when we call Life a movement we have no idea of a changing substance; the naturally appropriate act of each member of the living thing makes up the Life, which is, therefore, not a shifting thing.

To bring the matter to the point: put it that life, tendency, are no changements; that memories are not forms stamped upon the mind, that notions are not of the nature of impressions on sealing-wax; we thence draw the general conclusion that in all such states and movements the Soul, or Mind, is unchanged in substance and in essence, that virtue and vice are not something imported into the Soul- as heat and cold, blackness or whiteness are importations into body- but that, in all this relation, matter and spirit are exactly and comprehensively contraries.

4. We have, however, still to examine what is called the affective phase of the Soul. This has, no doubt, been touched upon above where we dealt with the passions in general as grouped about the initiative phase of the Soul and the desiring faculty in its effort to shape things to its choice: but more is required; we must begin by forming a clear idea of what is meant by this affective faculty of the Soul.

In general terms it means the centre about which we recognize the affections to be grouped; and by affections we mean those states upon which follow pleasure and pain.

Now among these affections we must distinguish. Some are pivoted upon judgements; thus, a Man judging his death to be at hand may feel fear; foreseeing some fortunate turn of events, he is happy: the opinion lies in one sphere; the affection is stirred in another. Sometimes the affections take the lead and automatically bring in the notion which thus becomes present to the appropriate faculty: but as we have explained, an act of opinion does not introduce any change into the Soul or Mind: what happens is that from the notion of some impending evil is produced the quite separate thing, fear, and this fear, in turn, becomes known in that part of the Mind which is said under such circumstances to harbour fear.

But what is the action of this fear upon the Mind?

The general answer is that it sets up trouble and confusion before an evil anticipated. It should, however, be quite clear that the Soul or Mind is the seat of all imaginative representation- both the higher representation known as opinion or judgement and the lower representation which is not so much a judgement as a vague notion unattended by discrimination, something resembling the action by which, as is believed, the "Nature" of common speech produces, unconsciously, the objects of the partial sphere. It is equally certain that in all that follows upon the mental act or state, the disturbance, confined to the body, belongs to the sense-order; trembling, pallor, inability to speak, have obviously nothing to do with the spiritual portion of the being. The Soul, in fact, would have to be described as corporeal if it were the seat of such symptoms: besides, in that case the trouble would not even reach the body since the only transmitting principle, oppressed by sensation, jarred out of itself, would be inhibited.

None the less, there is an affective phase of the Soul or Mind and this is not corporeal; it can be, only, some kind of Ideal-form.

Now Matter is the one field of the desiring faculty, as of the principles of nutrition growth and engendering, which are root and spring to desire and to every other affection known to this Ideal-form. No Ideal-form can be the victim of disturbance or be in any way affected: it remains in tranquillity; only the Matter associated with it can be affected by any state or experience induced by the movement which its mere presence suffices to set up. Thus the vegetal Principle induces vegetal life but it does not, itself, pass through the processes of vegetation; it gives growth but it does not grow; in no movement which it originates is it moved with the motion it induces; it is in perfect repose, or, at least, its movement, really its act, is utterly different from what it causes elsewhere.

The nature of an Ideal-form is to be, of itself, an activity; it operates by its mere presence: it is as if Melody itself plucked the strings. The affective phase of the Soul or Mind will be the operative cause of all affection; it originates the movement either under the stimulus of some sense-presentment or independently- and it is a question to be examined whether the judgement leading to the movement operates from above or not- but the affective phase itself remains unmoved like Melody dictating music. The causes originating the movement may be likened to the musician; what is moved is like the strings of his instrument, and once more, the Melodic Principle itself is not affected, but

only the strings, though, however much the musician desired it, he could not pluck the strings except under dictation from the principle of Melody.

5. But why have we to call in Philosophy to make the Soul immune if it is thus immune from the beginning?

Because representations attack it at what we call the affective phase and cause a resulting experience, a disturbance, to which disturbance is joined the image of threatened evil: this amounts to an affection and Reason seeks to extinguish it, to ban it as destructive to the well-being of the Soul which by the mere absence of such a condition is immune, the one possible cause of affection not being present.

Take it that some such affections have engendered appearances presented before the Soul or Mind from without but taken [for practical purposes] to be actual experiences within it- then Philosophy's task is like that of a man who wishes to throw off the shapes presented in dreams, and to this end recalls to waking condition the mind that is breeding them.

But what can be meant by the purification of a Soul that has never been stained and by the separation of the Soul from a body to which it is essentially a stranger?

The purification of the Soul is simply to allow it to be alone; it is pure when it keeps no company; when it looks to nothing without itself; when it entertains no alien thoughts- be the mode or origin of such notions or affections what they may, a subject on which we have already touched- when it no longer sees in the world of image, much less elaborates images into veritable affections. Is it not a true purification to turn away towards the exact contrary of earthly things?

Separation, in the same way, is the condition of a soul no longer entering into the body to lie at its mercy; it is to stand as a light, set in the midst of trouble but unperturbed through all.

In the particular case of the affective phase of the Soul, purification is its awakening from the baseless visions which beset it, the refusal to see them; its separation consists in limiting its descent towards the lower and accepting no picture thence, and of course in the banning for its part too of all which the higher Soul ignores when it has arisen from the trouble storm and is no longer bound to the flesh by the chains of sensuality and of multiplicity but has subdued to itself the body and its entire surrounding so that it holds sovereignty, tranquilly, over all.

6. the Intellectual Essence, wholly of the order of Ideal-form, must be taken as impassive has been already established.

But Matter also is an incorporeal, though after a mode of its own; we must examine, therefore, how this stands, whether it is passive, as is commonly held, a thing that can be twisted to every shape and Kind, or whether it too must be considered impassive and in what sense and fashion so. But in engaging this question and defining the nature of

matter we must correct certain prevailing errors about the nature of the Authentic Existent, about Essence, about Being.

The Existent- rightly so called- is that which has authentic existence, that, therefore, which is existent completely, and therefore, again, that which at no point fails in existence. Having existence perfectly, it needs nothing to preserve it in being; it is, on the contrary, the source and cause from which all that appears to exist derives that appearance. This admitted, it must of necessity be in life, in a perfect life: if it failed it would be more nearly the nonexistent than the existent. But: The Being thus indicated is Intellect, is wisdom unalloyed. It is, therefore, determined and rounded off; it is nothing potentially that is not of the same determined order, otherwise it would be in default.

Hence its eternity, its identity, its utter irreceptivity and impermeability. If it took in anything, it must be taking in something outside itself, that is to say, Existence would at last include non-existence. But it must be Authentic Existence all through; it must, therefore, present itself equipped from its own stores with all that makes up Existence so that all stands together and all is one thing. The Existent [Real Being] must have thus much of determination: if it had not, then it could not be the source of the Intellectual Principle and of Life which would be importations into it originating in the sphere of non-Being; and Real Being would be lifeless and mindless; but mindlessness and lifelessness are the characteristics of non-being and must belong to the lower order, to the outer borders of the existent; for Intellect and Life rise from the Beyond-Existence [the Indefinable Supreme]- though Itself has no need of them- and are conveyed from It into the Authentic Existent.

If we have thus rightly described the Authentic Existent, we see that it cannot be any kind of body nor the under-stuff of body; in such entities the Being is simply the existing of things outside of Being.

But body, a non-existence? Matter, on which all this universe rises, a non-existence? Mountain and rock, the wide solid earth, all that resists, all that can be struck and driven, surely all proclaims the real existence of the corporeal? And how, it will be asked, can we, on the contrary, attribute Being, and the only Authentic Being, to entities like Soul and Intellect, things having no weight or pressure, yielding to no force, offering no resistance, things not even visible?

Yet even the corporeal realm witnesses for us; the resting earth has certainly a scantier share in Being than belongs to what has more motion and less solidity- and less than belongs to its own most upward element, for fire begins, already, to flit up and away outside of the body-kind.

In fact, it appears to be precisely the most self-sufficing that bear least hardly, least painfully, on other things, while the heaviest and earthiest bodies- deficient, falling, unable to bear themselves upward- these, by the very down-thrust due to their feebleness, offer the resistance which belongs to the falling habit and to the lack of buoyancy. It is lifeless objects that deal the severest blows; they hit hardest and hurt most; where there is life- that is to say participation in Being- there is beneficence

towards the environment, all the greater as the measure of Being is fuller.

Again, Movement, which is a sort of life within bodies, an imitation of true Life, is the more decided where there is the least of body a sign that the waning of Being makes the object affected more distinctly corporeal.

The changes known as affections show even more clearly that where the bodily quality is most pronounced susceptibility is at its intensest- earth more susceptible than other elements, and these others again more or less so in the degree of their corporeality: sever the other elements and, failing some preventive force, they join again; but earthy matter divided remains apart indefinitely. Things whose nature represents a diminishment have no power of recuperation after even a slight disturbance and they perish; thus what has most definitely become body, having most closely approximated to non-being lacks the strength to reknit its unity: the heavy and violent crash of body against body works destruction, and weak is powerful against weak, non-being against its like.

Thus far we have been meeting those who, on the evidence of thrust and resistance, identify body with real being and find assurance of truth in the phantasms that reach us through the senses, those, in a word, who, like dreamers, take for actualities the figments of their sleeping vision. The sphere of sense, the Soul in its slumber; for all of the Soul that is in body is asleep and the true getting-up is not bodily but from the body: in any movement that takes the body with it there is no more than a passage from sleep to sleep, from bed to bed; the veritable waking or rising is from corporeal things; for these, belonging to the Kind directly opposed to Soul, present to it what is directly opposed to its essential existence: their origin, their flux, and their perishing are the warning of their exclusion from the Kind whose Being is Authentic.

7. We are thus brought back to the nature of that underlying matter and the things believed to be based upon it; investigation will show us that Matter has no reality and is not capable of being affected.

Matter must be bodiless- for body is a later production, a compound made by Matter in conjunction with some other entity. Thus it is included among incorporeal things in the sense that body is something that is neither Real-Being nor Matter.

Matter is no Soul; it is not Intellect, is not Life, is no Ideal-Principle, no Reason-Principle; it is no limit or bound, for it is mere indetermination; it is not a power, for what does it produce?

It lives on the farther side of all these categories and so has no tide to the name of Being. It will be more plausibly called a non-being, and this in the sense not of movement [away from Being] or station (in Not-Being) but of veritable Not-Being, so that it is no more than the image and phantasm of Mass, a bare aspiration towards substantial existence; it is stationary but not in the sense of having position, it is in itself invisible, eluding all effort to observe it, present where no one can look, unseen for all our gazing, ceaselessly presenting contraries in the things based upon it; it is large and

small, more and less, deficient and excessive; a phantasm unabiding and yet unable to withdraw- not even strong enough to withdraw, so utterly has it failed to accept strength from the Intellectual Principle, so absolute its lack of all Being.

Its every utterance, therefore, is a lie; it pretends to be great and it is little, to be more and it is less; and the Existence with which it masks itself is no Existence, but a passing trick making trickery of all that seems to be present in it, phantasms within a phantasm; it is like a mirror showing things as in itself when they are really elsewhere, filled in appearance but actually empty, containing nothing, pretending everything. Into it and out of it move mimicries of the Authentic Existents, images playing upon an image devoid of Form, visible against it by its very formlessness; they seem to modify it but in reality effect nothing, for they are ghostly and feeble, have no thrust and meet none in Matter either; they pass through it leaving no cleavage, as through water; or they might be compared to shapes projected so as to make some appearance upon what we can know only as the Void.

Further: if visible objects were of the rank of the originals from which they have entered into Matter we might believe Matter to be really affected by them, for we might credit them with some share of the power inherent in their Senders: but the objects of our experiences are of very different virtue than the realities they represent, and we deduce that the seeming modification of matter by visible things is unreal since the visible thing itself is unreal, having at no point any similarity with its source and cause. Feeble, in itself, a false thing and projected upon a falsity, like an image in dream or against water or on a mirror, it can but leave Matter unaffected; and even this is saying too little, for water and mirror do give back a faithful image of what presents itself before them.

8. It is a general principle that, to be modified, an object must be opposed in faculty, and in quality to the forces that enter and act upon it.

Thus where heat is present, the change comes by something that chills, where damp by some drying agency: we say a subject is modified when from warm it becomes cold, from dry wet.

A further evidence is in our speaking of a fire being burned out, when it has passed over into another element; we do not say that the Matter has been burned out: in other words, modification affects what is subject to dissolution; the acceptance of modification is the path towards dissolution; susceptibility to modification and susceptibility to dissolution go necessarily together. But Matter can never be dissolved. What into? By what process?

Still: Matter harbours heat, cold, qualities beyond all count; by these it is differentiated; it holds them as if they were of its very substance and they blend within it- since no quality is found isolated to itself- Matter lies there as the meeting ground of all these qualities with their changes as they act and react in the blend: how, then, can it fail to be modified in keeping? The only escape would be to declare Matter utterly and for ever apart from the qualities it exhibits; but the very notion of Substance implies that any and every thing present in it has some action upon it.

9. In answer: It must, first, be noted that there are a variety of modes in which an object may be said to be present to another or to exist in another. There is a "presence" which acts by changing the object- for good or for ill- as we see in the case of bodies, especially where there is life. But there is also a "presence" which acts, towards good or ill, with no modification of the object, as we have indicated in the case of the Soul. Then there is the case represented by the stamping of a design upon wax, where the "presence" of the added pattern causes no modification in the substance nor does its obliteration diminish it. And there is the example of Light whose presence does not even bring change of pattern to the object illuminated. A stone becoming cold does not change its nature in the process; it remains the stone it was. A drawing does not cease to be a drawing for being coloured.

The intermediary mass on which these surface changes appear is certainly not transmuted by them; but might there not be a modification of the underlying Matter?

No: it is impossible to think of Matter being modified by, for instance, colour- for, of course we must not talk of modification when there is no more than a presence, or at most a presenting of shape.

Mirrors and transparent objects, even more, offer a close parallel; they are quite unaffected by what is seen in or through them: material things are reflections, and the Matter on which they appear is further from being affected than is a mirror. Heat and cold are present in Matter, but the Matter itself suffers no change of temperature: growing hot and growing cold have to do only with quality; a quality enters and brings the impassible Substance under a new state- though, by the way, research into nature may show that cold is nothing positive but an absence, a mere negation. The qualities come together into Matter, but in most cases they can have no action upon each other; certainly there can be none between those of unlike scope: what effect, for example, could fragrance have on sweetness or the colour-quality on the quality of form, any quality on another of some unrelated order? The illustration of the mirror may well indicate to us that a given substratum may contain something quite distinct from itself- even something standing to it as a direct contrary- and yet remain entirely unaffected by what is thus present to it or merged into it.

A thing can be hurt only by something related to it, and similarly things are not changed or modified by any chance presence: modification comes by contrary acting upon contrary; things merely different leave each other as they were. Such modification by a direct contrary can obviously not occur in an order of things to which there is no contrary: Matter, therefore [the mere absence of Reality] cannot be modified: any modification that takes place can occur only in some compound of Matter and reality, or, speaking generally, in some agglomeration of actual things. The Matter itself- isolated, quite apart from all else, utterly simplex- must remain immune, untouched in the midst of all the interacting agencies; just as when people fight within their four walls, the house and the air in it remain without part in the turmoil.

We may take it, then, that while all the qualities and entities that appear upon Matter

group to produce each the effect belonging to its nature, yet Matter itself remains immune, even more definitely immune than any of those qualities entering into it which, not being contraries, are not affected by each other.

10. Further: If Matter were susceptible of modification, it must acquire something by the incoming of the new state; it will either adopt that state, or, at least, it will be in some way different from what it was. Now upon this first incoming quality suppose a second to supervene; the recipient is no longer Matter but a modification of Matter: this second quality, perhaps, departs, but it has acted and therefore leaves something of itself after it; the substratum is still further altered. This process proceeding, the substratum ends by becoming something quite different from Matter; it becomes a thing settled in many modes and many shapes; at once it is debarred from being the all-recipient; it will have closed the entry against many incomers. In other words, the Matter is no longer there: Matter is destructible.

No: if there is to be a Matter at all, it must be always identically as it has been from the beginning: to speak of Matter as changing is to speak of it as not being Matter.

Another consideration: it is a general principle that a thing changing must remain within its constitutive Idea so that the alteration is only in the accidents and not in the essential thing; the changing object must retain this fundamental permanence, and the permanent substance cannot be the member of it which accepts modification.

Therefore there are only two possibilities: the first, that Matter itself changes and so ceases to be itself, the second that it never ceases to be itself and therefore never changes.

We may be answered that it does not change in its character as Matter: but no one could tell us in what other character it changes; and we have the admission that the Matter in itself is not subject to change.

Just as the Ideal Principles stand immutably in their essence- which consists precisely in their permanence- so, since the essence of Matter consists in its being Matter [the substratum to all material things] it must be permanent in this character; because it is Matter, it is immutable. In the Intellectual realm we have the immutable Idea; here we have Matter, itself similarly immutable.

11. I think, in fact, that Plato had this in mind where he justly speaks of the Images of Real Existents “entering and passing out”: these particular words are not used idly: he wishes us to grasp the precise nature of the relation between Matter and the Ideas.

The difficulty on this point is not really that which presented itself to most of our predecessors- how the Ideas enter into Matter- it is rather the mode of their presence in it.

It is in fact strange at sight that Matter should remain itself intact, unaffected by Ideal-forms present within it, especially seeing that these are affected by each other. It

is surprising, too, that the entrant Forms should regularly expel preceding shapes and qualities, and that the modification [which cannot touch Matter] should affect what is a compound [of Idea with Matter] and this, again, not a haphazard but precisely where there is need of the incoming or outgoing of some certain Ideal-form, the compound being deficient through the absence of a particular principle whose presence will complete it.

But the reason is that the fundamental nature of Matter can take no increase by anything entering it, and no decrease by any withdrawal: what from the beginning it was, it remains. It is not like those things whose lack is merely that of arrangement and order which can be supplied without change of substance as when we dress or decorate something bare or ugly.

But where the bringing to order must cut through to the very nature, the base original must be transmuted: it can leave ugliness for beauty only by a change of substance. Matter, then, thus brought to order must lose its own nature in the supreme degree unless its baseness is an accidental: if it is base in the sense of being Baseness the Absolute, it could never participate in order, and, if evil in the sense of being Evil the Absolute, it could never participate in good.

We conclude that Matter's participation in Idea is not by way of modification within itself: the process is very different; it is a bare seeming. Perhaps we have here the solution of the difficulty as to how Matter, essentially evil, can be reaching towards The Good: there would be no such participation as would destroy its essential nature. Given this mode of pseudo-participation- in which Matter would, as we say, retain its nature, unchanged, always being what it has essentially been- there is no longer any reason to wonder as to how while essentially evil, it yet participates in Idea: for, by this mode, it does not abandon its own character: participation is the law, but it participates only just so far as its essence allows. Under a mode of participation which allows it to remain on its own footing, its essential nature stands none the less, whatsoever the Idea, within that limit, may communicate to it: it is by no means the less evil for remaining immutably in its own order. If it had authentic participation in The Good and were veritably changed, it would not be essentially evil.

In a word, when we call Matter evil we are right only if we mean that it is not amenable to modification by The Good; but that means simply that it is subject to no modification whatever.

12. This is Plato's conception: to him participation does not, in the case of Matter, comport any such presence of an Ideal-form in a Substance to be shaped by it as would produce one compound thing made up of the two elements changing at the same moment, merging into one another, modified each by the other.

In his haste to his purpose he raises many difficult questions, but he is determined to disown that view; he labours to indicate in what mode Matter can receive the Ideal-forms without being, itself, modified. The direct way is debarred since it is not easy to point to things actually present in a base and yet leaving that base unaffected: he

therefore devises a metaphor for participation without modification, one which supports, also, his thesis that all appearing to the senses is void of substantial existence and that the region of mere seeming is vast.

Holding, as he does, that it is the patterns displayed upon Matter that cause all experience in living bodies while the Matter itself remains unaffected, he chooses this way of stating its immutability, leaving us to make out for ourselves that those very patterns impressed upon it do not comport any experience, any modification, in itself.

In the case, no doubt, of the living bodies that take one pattern or shape after having borne another, it might be said that there was a change, the variation of shape being made verbally equivalent to a real change: but since Matter is essentially without shape or magnitude, the appearing of shape upon it can by no freedom of phrase be described as a change within it. On this point one must have "a rule for thick and thin" one may safely say that the underlying Kind contains nothing whatever in the mode commonly supposed.

But if we reject even the idea of its really containing at least the patterns upon it, how is it, in any sense, a recipient?

The answer is that in the metaphor cited we have some reasonably adequate indication of the impassibility of Matter coupled with the presence upon it of what may be described as images of things not present.

But we cannot leave the point of its impassibility without a warning against allowing ourselves to be deluded by sheer custom of speech.

Plato speaks of Matter as becoming dry, wet, inflamed, but we must remember the words that follow: "and taking the shape of air and of water": this blunts the expressions "becoming wet, becoming inflamed"; once we have Matter thus admitting these shapes, we learn that it has not itself become a shaped thing but that the shapes remain distinct as they entered. We see, further, that the expression "becoming inflamed" is not to be taken strictly: it is rather a case of becoming fire. Becoming fire is very different from becoming inflamed, which implies an outside agency and, therefore, susceptibility to modification. Matter, being itself a portion of fire, cannot be said to catch fire. To suggest that the fire not merely permeates the matter, but actually sets it on fire is like saying that a statue permeates its bronze.

Further, if what enters must be an Ideal-Principle how could it set Matter aflame? But what if it is a pattern or condition? No: the object set aflame is so in virtue of the combination of Matter and condition.

But how can this follow on the conjunction when no unity has been produced by the two?

Even if such a unity had been produced, it would be a unity of things not mutually sharing experiences but acting upon each other. And the question would then arise

whether each was effective upon the other or whether the sole action was not that of one (the form) preventing the other [the Matter] from slipping away?

But when any material thing is severed, must not the Matter be divided with it? Surely the bodily modification and other experience that have accompanied the sundering, must have occurred, identically, within the Matter?

This reasoning would force the destructibility of Matter upon us: "the body is dissolved; then the Matter is dissolved." We would have to allow Matter to be a thing of quantity, a magnitude. But since it is not a magnitude it could not have the experiences that belong to magnitude and, on the larger scale, since it is not body it cannot know the experiences of body.

In fact those that declare Matter subject to modification may as well declare it body right out.

13. Further, they must explain in what sense they hold that Matter tends to slip away from its form [the Idea]. Can we conceive it stealing out from stones and rocks or whatever else envelops it?

And of course they cannot pretend that Matter in some cases rebels and sometimes not. For if once it makes away of its own will, why should it not always escape? If it is fixed despite itself, it must be enveloped by some Ideal-Form for good and all. This, however, leaves still the question why a given portion of Matter does not remain constant to any one given form: the reason lies mainly in the fact that the Ideas are constantly passing into it.

In what sense, then, is it said to elude form?

By very nature and for ever?

But does not this precisely mean that it never ceases to be itself, in other words that its one form is an invincible formlessness? In no other sense has Plato's dictum any value to those that invoke it.

Matter [we read] is "the receptacle and nurse of all generation."

Now if Matter is such a receptacle and nurse, all generation is distinct from it; and since all the changeable lies in the realm of generation, Matter, existing before all generation, must exist before all change.

"Receptacle" and "nurse"; then it "retains its identity; it is not subject to modification. Similarly if it is" [as again we read] "the ground on which individual things appear and disappear," and so, too, if it is a "place, a base." Where Plato describes and identifies it as "a ground to the ideas" he is not attributing any state to it; he is probing after its distinctive manner of being.

And what is that?

This which we think of as a Nature-Kind cannot be included among Existents but must utterly rebel from the Essence of Real Beings and be therefore wholly something other than they- for they are Reason-Principles and possess Authentic Existence- it must inevitably, by virtue of that difference, retain its integrity to the point of being permanently closed against them and, more, of rejecting close participation in any image of them.

Only on these terms can it be completely different: once it took any Idea to hearth and home, it would become a new thing, for it would cease to be the thing apart, the ground of all else, the receptacle of absolutely any and every form. If there is to be a ceaseless coming into it and going out from it, itself must be unmoved and immune in all the come and go. The entrant Idea will enter as an image, the untrue entering the untruth.

But, at least, in a true entry?

No: How could there be a true entry into that which, by being falsity, is banned from ever touching truth?

Is this then a pseudo-entry into a pseudo-entity- something merely brought near, as faces enter the mirror, there to remain just as long as the people look into it?

Yes: if we eliminated the Authentic Existents from this Sphere nothing of all now seen in sense would appear one moment longer.

Here the mirror itself is seen, for it is itself an Ideal-Form of a Kind [has some degree of Real Being]; but bare Matter, which is no Idea, is not a visible thing; if it were, it would have been visible in its own character before anything else appeared upon it. The condition of Matter may be illustrated by that of air penetrated by light and remaining, even so, unseen because it is invisible whatever happens.

The reflections in the mirror are not taken to be real, all the less since the appliance on which they appear is seen and remains while the images disappear, but Matter is not seen either with the images or without them. But suppose the reflections on the mirror remaining and the mirror itself not seen, we would never doubt the solid reality of all that appears.

If, then, there is, really, something in a mirror, we may suppose objects of sense to be in Matter in precisely that way: if in the mirror there is nothing, if there is only a seeming of something, then we may judge that in Matter there is the same delusion and that the seeming is to be traced to the Substantial-Existence of the Real-Beings, that Substantial-Existence in which the Authentic has the real participation while only an unreal participation can belong to the unauthentic since their condition must differ from that which they would know if the parts were reversed, if the Authentic Existents were not and they were.

14. But would this mean that if there were no Matter nothing would exist?

Precisely as in the absence of a mirror, or something of similar power, there would be no reflection.

A thing whose very nature is to be lodged in something else cannot exist where the base is lacking- and it is the character of a reflection to appear in something not itself.

Of course supposing anything to desert from the Authentic Beings, this would not need an alien base: but these Beings are not subject to flux, and therefore any outside manifestation of them implies something other than themselves, something offering a base to what never enters, something which by its presence, in its insistence, by its cry for help, in its beggarm, strives as it were by violence to acquire and is always disappointed, so that its poverty is enduring, its cry unceasing.

This alien base exists and the myth represents it as a pauper to exhibit its nature, to show that Matter is destitute of The Good. The claimant does not ask for all the Giver's store, but it welcomes whatever it can get; in other words, what appears in Matter is not Reality.

The name, too [Poverty], conveys that Matter's need is never met. The union with Poros, Possession, is designed to show that Matter does not attain to Reality, to Plenitude, but to some bare sufficiency- in point of fact to imaging skill.

It is, of course, impossible that an outside thing belonging in any degree to Real-Being- whose Nature is to engender Real-Beings- should utterly fail of participation in Reality: but here we have something perplexing; we are dealing with utter Non-Being, absolutely without part in Reality; what is this participation by the non-participant, and how does mere neighbouring confer anything on that which by its own nature is precluded from any association?

The answer is that all that impinges upon this Non-Being is flung back as from a repelling substance; we may think of an Echo returned from a percussive plane surface; it is precisely because of the lack of retention that the phenomenon is supposed to belong to that particular place and even to arise there.

If Matter were participant and received Reality to the extent which we are apt to imagine, it would be penetrated by a Reality thus sucked into its constitution. But we know that the Entrant is not thus absorbed: Matter remains as it was, taking nothing to itself: it is the check to the forthwelling of Authentic Existence; it is a ground that repels; it is a mere receptacle to the Realities as they take their common path and here meet and mingle. It resembles those reflecting vessels, filled with water, which are often set against the sun to produce fire: the heat rays- prevented, by their contrary within, from being absorbed- are flung out as one mass.

It is in this sense and way that Matter becomes the cause of the generated realm; the combinations within it hold together only after some such reflective mode.

15. Now the objects attracting the sun-rays to themselves- illuminated by a fire of the sense-order- are necessarily of the sense-order; there is perceptibility because there has been a union of things at once external to each other and continuous, contiguous, in direct contact, two extremes in one line. But the Reason-Principle operating upon Matter is external to it only in a very different mode and sense: exteriority in this case is amply supplied by contrariety of essence and can dispense with any opposite ends [any question of lineal position]; or, rather, the difference is one that actually debars any local extremity; sheer incongruity of essence, the utter failure in relationship, inhibits admixture [between Matter and any form of Being].

The reason, then, of the immutability of Matter is that the entrant principle neither possesses it nor is possessed by it. Consider, as an example, the mode in which an opinion or representation is present in the mind; there is no admixture; the notion that came goes in its time, still integrally itself alone, taking nothing with it, leaving nothing after it, because it has not been blended with the mind; there is no "outside" in the sense of contact broken, and the distinction between base and entrant is patent not to the senses but to the reason.

In that example, no doubt, the mental representation- though it seems to have a wide and unchecked control- is an image, while the Soul [Mind] is in its nature not an image [but a Reality]: none the less the Soul or Mind certainly stands to the concept as Matter, or in some analogous relation. The representation, however, does not cover the Mind over; on the contrary it is often expelled by some activity there; however urgently it presses in, it never effects such an obliteration as to be taken for the Soul; it is confronted there by indwelling powers, by Reason-Principles, which repel all such attack.

Matter- feeble far than the Soul for any exercise of power, and possessing no phase of the Authentic Existents, not even in possession of its own falsity- lacks the very means of manifesting itself, utter void as it is; it becomes the means by which other things appear, but it cannot announce its own presence. Penetrating thought may arrive at it, discriminating it from Authentic Existence; then, it is discerned as something abandoned by all that really is, by even the dimmest semblants of being, as a thing dragged towards every shape and property and appearing to follow- yet in fact not even following.

16. An Ideal-Principle approaches and leads Matter towards some desired dimension, investing this non-existent underlie with a magnitude from itself which never becomes incorporate- for Matter, if it really incorporated magnitude, would be a mass.

Eliminate this Ideal-Form and the substratum ceases to be a thing of magnitude, or to appear so: the mass produced by the Idea was, let us suppose, a man or a horse; the horse-magnitude came upon the Matter when a horse was produced upon it; when the horse ceases to exist upon the Matter, the magnitude of the horse departs also. If we are told that the horse implies a certain determined bulk and that this bulk is a permanent thing, we answer that what is permanent in this case is not the magnitude of

the horse but the magnitude of mass in general. That same Magnitude might be fire or earth; on their disappearance their particular magnitudes would disappear with them. Matter, then, can never take to itself either pattern or magnitude; if it did, it would no longer be able to turn from being fire, let us say, into being something else; it would become and be fire once for all.

In a word, though Matter is far extended- so vastly as to appear co-extensive with all this sense-known Universe- yet if the Heavens and their content came to an end, all magnitude would simultaneously pass from Matter with, beyond a doubt, all its other properties; it would be abandoned to its own Kind, retaining nothing of all that which, in its own peculiar mode, it had hitherto exhibited.

Where an entrant force can effect modification it will inevitably leave some trace upon its withdrawal; but where there can be no modification, nothing can be retained; light comes and goes, and the air is as it always was.

That a thing essentially devoid of magnitude should come to a certain size is no more astonishing than that a thing essentially devoid of heat should become warm: Matter's essential existence is quite separate from its existing in bulk, since, of course, magnitude is an immaterial principle as pattern is. Besides, if we are not to reduce Matter to nothing, it must be all things by way of participation, and Magnitude is one of those all things.

In bodies, necessarily compounds, Magnitude though not a determined Magnitude must be present as one of the constituents; it is implied in the very notion of body; but Matter- not a Body- excludes even undetermined Magnitude.

17. Nor can we, on the other hand, think that matter is simply Absolute Magnitude.

Magnitude is not, like Matter, a receptacle; it is an Ideal-Principle: it is a thing standing apart to itself, not some definite Mass. The fact is that the self-gathered content of the Intellectual Principle or of the All-Soul, desires expansion [and thereby engenders secondaries]: in its images- aspiring and moving towards it and eagerly imitating its act- is vested a similar power of reproducing their states in their own derivatives. The Magnitude latent in the expansive tendency of the Image-making phase [of Intellect or All-Soul] runs forth into the Absolute Magnitude of the Universe; this in turn enlists into the process the spurious magnitude of Matter: the content of the Supreme, thus, in virtue of its own prior extension enables Matter- which never possesses a content- to exhibit the appearance of Magnitude. It must be understood that spurious Magnitude consists in the fact that a thing [Matter] not possessing actual Magnitude strains towards it and has the extension of that straining. All that is Real Being gives forth a reflection of itself upon all else; every Reality, therefore, has Magnitude which by this process is communicated to the Universe.

The Magnitude inherent in each Ideal-Principle- that of a horse or of anything else- combines with Magnitude the Absolute with the result that, irradiated by that Absolute, Matter entire takes Magnitude and every particle of it becomes a mass; in this way, by

virtue at once of the totality of Idea with its inherent magnitude and of each several specific Idea, all things appear under mass; Matter takes on what we conceive as extension; it is compelled to assume a relation to the All and, gathered under this Idea and under Mass, to be all things- in the degree in which the operating power can lead the really nothing to become all.

By the conditions of Manifestation, colour rises from non-colour [= from the colourless prototype of colour in the Ideal Realm]. Quality, known by the one name with its parallel in the sphere of Primals, rises, similarly, from non-quality: in precisely the same mode, the Magnitude appearing upon Matter rises from non-Magnitude or from that Primal which is known to us by the same name; so that material things become visible through standing midway between bare underlie and Pure Idea. All is perceptible by virtue of this origin in the Intellectual Sphere but all is falsity since the base in which the manifestation takes place is a non-existent.

Particular entities thus attain their Magnitude through being drawn out by the power of the Existents which mirror themselves and make space for themselves in them. And no violence is required to draw them into all the diversity of Shapes and Kinds because the phenomenal All exists by Matter [by Matter's essential all-receptivity] and because each several Idea, moreover, draws Matter its own way by the power stored within itself, the power it holds from the Intellectual Realm. Matter is manifested in this sphere as Mass by the fact that it mirrors the Absolute Magnitude; Magnitude here is the reflection in the mirror. The Ideas meet all of necessity in Matter [the Ultimate of the emanatory progress]: and Matter, both as one total thing and in its entire scope, must submit itself, since it is the Material of the entire Here, not of any one determined thing: what is, in its own character, no determined thing may become determined by an outside force- though, in becoming thus determined, it does not become the definite thing in question, for thus it would lose its own characteristic indetermination.

18. The Ideal Principle possessing the Intellection [= Idea, Noesis] of Magnitude- assuming that this Intellection is of such power as not merely to subsist within itself but to be urged outward as it were by the intensity of its life- will necessarily realize itself in a Kind [= Matter] not having its being in the Intellective Principle, not previously possessing the Idea of Magnitude or any trace of that Idea or any other.

What then will it produce [in this Matter] by virtue of that power?

Not horse or cow: these are the product of other Ideas.

No: this Principle comes from the source of Magnitude [= is primal "Magnitude"] and therefore Matter can have no extension, in which to harbour the Magnitude of the Principle, but can take in only its reflected appearance.

To the thing which does not enjoy Magnitude in the sense of having mass-extension in its own substance and parts, the only possibility is that it present some partial semblance of Magnitude, such as being continuous, not here and there and everywhere, that its parts be related within it and ungapped. An adequate reflection of a

great mass cannot be produced in a small space- mere size prevents- but the greater, pursuing the hope of that full self-presentment, makes progress towards it and brings about a nearer approach to adequate mirroring in the parallel from which it can never withhold its radiation: thus it confers Magnitude upon that [= Matter] which has none and cannot even muster up the appearance of having any, and the visible resultant exhibits the Magnitude of mass.

Matter, then, wears Magnitude as a dress thrown about it by its association with that Absolute Magnitude to whose movement it must answer; but it does not, for that, change its Kind; if the Idea which has clothed it were to withdraw, it would once again be what it permanently is, what it is by its own strength, or it would have precisely the Magnitude lent to it by any other form that happens to be present in it.

The [Universal] Soul- containing the Ideal Principles of Real-Beings, and itself an Ideal Principle- includes all in concentration within itself, just as the Ideal Principle of each particular entity is complete and self-contained: it, therefore, sees these principles of sensible things because they are turned, as it were, towards it and advancing to it: but it cannot harbour them in their plurality, for it cannot depart from its Kind; it sees them, therefore, stripped of Mass. Matter, on the contrary, destitute of resisting power since it has no Act of its own and is a mere shadow, can but accept all that an active power may choose to send. In what is thus sent, from the Reason-Principle in the Intellectual Realm, there is already contained a degree of the partial object that is to be formed: in the image-making impulse within the Reason-Principle there is already a step [towards the lower manifestation] or we may put it that the downward movement from the Reason-Principle is a first form of the partial: utter absence of partition would mean no movement but [sterile] repose. Matter cannot be the home of all things in concentration as the Soul is: if it were so, it would belong to the Intellective Sphere. It must be all-recipient but not in that partless mode. It is to be the Place of all things, and it must therefore extend universally, offer itself to all things, serve to all interval: thus it will be a thing unconfined to any moment [of space or time] but laid out in submission to all that is to be.

But would we not expect that some one particularized form should occupy Matter [at once] and so exclude such others as are not able to enter into combination?

No: for there is no first Idea except the Ideal Principle of the Universe- and, by this Idea, Matter is [the seat of] all things at once and of the particular thing in its parts- for the Matter of a living being is disparted according to the specific parts of the organism: if there were no such partition nothing would exist but the Reason-Principle.

19. The Ideal Principles entering into Matter as to a Mother [to be “born into the Universe”] affect it neither for better nor for worse.

Their action is not upon Matter but upon each other; these powers conflict with their opponent principles, not with their substrata- which it would be foolish to confuse with the entrant forms- Heat [the Principle] annuls Cold, and Blackness annuls Whiteness; or, the opponents blend to form an intermediate quality. Only that is affected which

enters into combinations: being affected is losing something of self-identity.

In beings of soul and body, the affection occurs in the body, modified according to the qualities and powers presiding at the act of change: in all such dissolution of constituent parts, in the new combinations, in all variation from the original structure, the affection is bodily, the Soul or Mind having no more than an accompanying knowledge of the more drastic changes, or perhaps not even that. [Body is modified: Mind knows] but the Matter concerned remains unaffected; heat enters, cold leaves it, and it is unchanged because neither Principle is associated with it as friend or enemy.

So the appellation "Recipient and Nurse" is the better description: Matter is the mother only in the sense indicated; it has no begetting power. But probably the term Mother is used by those who think of a Mother as Matter to the offspring, as a container only, giving nothing to them, the entire bodily frame of the child being formed out of food. But if this Mother does give anything to the offspring it does so not in its quality as Matter but as being an Ideal-Form; for only the Idea is generative; the contrary Kind is sterile.

This, I think, is why the doctors of old, teaching through symbols and mystic representations, exhibit the ancient Hermes with the generative organ always in active posture; this is to convey that the generator of things of sense is the Intellectual Reason Principle: the sterility of Matter, eternally unmoved, is indicated by the eunuchs surrounding it in its representation as the All-Mother.

This too exalting title is conferred upon it in order to indicate that it is the source of things in the sense of being their underlie: it is an approximate name chosen for a general conception; there is no intention of suggesting a complete parallel with motherhood to those not satisfied with a surface impression but needing a precisely true presentment; by a remote symbolism, the nearest they could find, they indicate that Matter is sterile, not female to full effect, female in receptivity only, not in pregnancy: this they accomplish by exhibiting Matter as approached by what is neither female nor effectively male, but castrated of that impregnating power which belongs only to the unchangeably masculine.

SEVENTH TRACTATE.

TIME AND ETERNITY.

1. Eternity and Time; two entirely separate things, we explain "the one having its being in the everlasting Kind, the other in the realm of Process, in our own Universe"; and, by continually using the words and assigning every phenomenon to the one or the other category, we come to think that, both by instinct and by the more detailed attack of thought, we hold an adequate experience of them in our minds without more ado.

When, perhaps, we make the effort to clarify our ideas and close into the heart of the matter we are at once unsettled: our doubts throw us back upon ancient explanations; we choose among the various theories, or among the various interpretations of some one theory, and so we come to rest, satisfied, if only we can counter a question with an

approved answer, and glad to be absolved from further enquiry.

Now, we must believe that some of the venerable philosophers of old discovered the truth; but it is important to examine which of them really hit the mark and by what guiding principle we can ourselves attain to certitude.

What, then, does Eternity really mean to those who describe it as something different from Time? We begin with Eternity, since when the standing Exemplar is known, its representation in image- which Time is understood to be- will be clearly apprehended- though it is of course equally true, admitting this relationship to Time as image to Eternity the original, that if we chose to begin by identifying Time we could thence proceed upwards by Recognition [the Platonic Anamnesis] and become aware of the Kind which it images.

2. What definition are we to give to Eternity?

Can it be identified with the [divine or] Intellectual Substance itself?

This would be like identifying Time with the Universe of Heavens and Earth- an opinion, it is true, which appears to have had its adherents. No doubt we conceive, we know, Eternity as something most august; most august, too, is the Intellectual Kind; and there is no possibility of saying that the one is more majestic than the other, since no such degrees can be asserted in the Above-World; there is therefore a certain excuse for the identification- all the more since the Intellectual Substance and Eternity have the one scope and content.

Still; by the fact of representing the one as contained within the other, by making Eternity a predicate to the Intellectual Existents- "the Nature of the Exemplar," we read, "is eternal"- we cancel the identification; Eternity becomes a separate thing, something surrounding that Nature or lying within it or present to it. And the majestic quality of both does not prove them identical: it might be transmitted from the one to the other. So, too, Eternity and the Divine Nature envelop the same entities, yes; but not in the same way: the Divine may be thought of as enveloping parts, Eternity as embracing its content in an unbroken whole, with no implication of part, but merely from the fact that all eternal things are so by conforming to it.

May we, perhaps, identify Eternity with Repose-There as Time has been identified with Movement-Here?

This would bring on the counter-question whether Eternity is presented to us as Repose in the general sense or as the Repose that envelops the Intellectual Essence.

On the first supposition we can no more talk of Repose being eternal than of Eternity being eternal: to be eternal is to participate in an outside thing, Eternity.

Further, if Eternity is Repose, what becomes of Eternal Movement, which, by this identification, would become a thing of Repose?

Again, the conception of Repose scarcely seems to include that of perpetuity- I am speaking of course not of perpetuity in the time-order (which might follow on absence of movement) but of that which we have in mind when we speak of Eternity.

If, on the other hand, Eternity is identified with the Repose of the divine Essence, all species outside of the divine are put outside of Eternity.

Besides, the conception of Eternity requires not merely Repose but also unity- and, in order to keep it distinct from Time, a unity including interval- but neither that unity nor that absence of interval enters into the conception of Repose as such.

Lastly, this unchangeable Repose in unity is a predicate asserted of Eternity, which, therefore, is not itself Repose, the absolute, but a participant in Repose.

3. What, then, can this be, this something in virtue of which we declare the entire divine Realm to be Eternal, everlasting? We must come to some understanding of this perpetuity with which Eternity is either identical or in conformity.

It must at once, be at once something in the nature of unity and yet a notion compact of diversity, or a Kind, a Nature, that waits upon the Existents of that Other World, either associated with them or known in and upon them, they collectively being this Nature which, with all its unity, is yet diverse in power and essence. Considering this multifarious power, we declare it to be Essence in its relation to this sphere which is substratum or underlie to it; where we see life we think of it as Movement; where all is unvaried self-identity we call it Repose; and we know it as, at once, Difference and Identity when we recognize that all is unity with variety.

Then we reconstruct; we sum all into a collected unity once more, a sole Life in the Supreme; we concentrate Diversity and all the endless production of act: thus we know Identity, a concept or, rather, a Life never varying, not becoming what previously it was not, the thing immutably itself, broken by no interval; and knowing this, we know Eternity.

We know it as a Life changelessly motionless and ever holding the Universal content [time, space, and phenomena] in actual presence; not this now and now that other, but always all; not existing now in one mode and now in another, but a consummation without part or interval. All its content is in immediate concentration as at one point; nothing in it ever knows development: all remains identical within itself, knowing nothing of change, for ever in a Now since nothing of it has passed away or will come into being, but what it is now, that it is ever.

Eternity, therefore- while not the Substratum [not the essential foundation of the Divine or Intellectual Principle]- may be considered as the radiation of this Substratum: it exists as the announcement of the Identity in the Divine, of that state- of being thus and not otherwise- which characterizes what has no futurity but eternally is.

What future, in fact, could bring to that Being anything which it now does not possess; and could it come to be anything which it is not once for all?

There exists no source or ground from which anything could make its way into that standing present; any imagined entrant will prove to be not alien but already integral. And as it can never come to be anything at present outside it, so, necessarily, it cannot include any past; what can there be that once was in it and now is gone? Futurity, similarly, is banned; nothing could be yet to come to it. Thus no ground is left for its existence but that it be what it is.

That which neither has been nor will be, but simply possesses being; that which enjoys stable existence as neither in process of change nor having ever changed- that is Eternity. Thus we come to the definition: the Life- instantaneously entire, complete, at no point broken into period or part- which belongs to the Authentic Existent by its very existence, this is the thing we were probing for- this is Eternity.

4. We must, however, avoid thinking of it as an accidental from outside grafted upon that Nature: it is native to it, integral to it.

It is discerned as present essentially in that Nature like everything else that we can predicate There- all immanent, springing from that Essence and inherent to that Essence. For whatsoever has primal Being must be immanent to the Firsts and be a First-Eternity equally with The Good that is among them and of them and equally with the truth that is among them.

In one aspect, no doubt, Eternity resides in a partial phase of the All-Being; but in another aspect it is inherent in the All taken as a totality, since that Authentic All is not a thing patched up out of external parts, but is authentically an all because its parts are engendered by itself. It is like the truthfulness in the Supreme which is not an agreement with some outside fact or being but is inherent in each member about which it is the truth. To an authentic All it is not enough that it be everything that exists: it must possess allness in the full sense that nothing whatever is absent from it. Then nothing is in store for it: if anything were to come, that thing must have been lacking to it, and it was, therefore, not All. And what, of a Nature contrary to its own, could enter into it when it is [the Supreme and therefore] immune? Since nothing can accrue to it, it cannot seek change or be changed or ever have made its way into Being.

Engendered things are in continuous process of acquisition; eliminate futurity, therefore, and at once they lose their being; if the non-engendered are made amenable to futurity they are thrown down from the seat of their existence, for, clearly, existence is not theirs by their nature if it appears only as a being about to be, a becoming, an advancing from stage to stage.

The essential existence of generated things seems to lie in their existing from the time of their generation to the ultimate of time after which they cease to be: but such an existence is compact of futurity, and the annulment of that futurity means the stopping of the life and therefore of the essential existence.

Such a stoppage would be true, also, of the [generated] All in so far as it is a thing of process and change: for this reason it keeps hastening towards its future, dreading to rest, seeking to draw Being to itself by a perpetual variety of production and action and by its circling in a sort of ambition after Essential Existence.

And here we have, incidentally, lighted upon the cause of the Circuit of the All; it is a movement which seeks perpetuity by way of futurity.

The Primals, on the contrary, in their state of blessedness have no such aspiration towards anything to come: they are the whole, now; what life may be thought of as their due, they possess entire; they, therefore, seek nothing, since there is nothing future to them, nothing external to them in which any futurity could find lodgement.

Thus the perfect and all-comprehensive essence of the Authentic Existent does not consist merely in the completeness inherent in its members; its essence includes, further, its established immunity from all lack with the exclusion, also, of all that is without Being- for not only must all things be contained in the All and Whole, but it can contain nothing that is, or was ever, non-existent- and this State and Nature of the Authentic Existent is Eternity: in our very word, Eternity means Ever-Being.

5. This Ever-Being is realized when upon examination of an object I am able to say- or rather, to know- that in its very Nature it is incapable of increment or change; anything that fails by that test is no Ever-Existent or, at least, no Ever-All-Existent.

But is perpetuity enough in itself to constitute an Eternal?

No: the object must, farther, include such a Nature-Principle as to give the assurance that the actual state excludes all future change, so that it is found at every observation as it always was.

Imagine, then, the state of a being which cannot fall away from the vision of this but is for ever caught to it, held by the spell of its grandeur, kept to it by virtue of a nature itself unfailing- or even the state of one that must labour towards Eternity by directed effort, but then to rest in it, immoveable at any point assimilated to it, co-eternal with it, contemplating Eternity and the Eternal by what is Eternal within the self.

Accepting this as a true account of an eternal, a perdurable Existent- one which never turns to any Kind outside itself, that possesses life complete once for all, that has never received any accession, that is now receiving none and will never receive any- we have, with the statement of a perduring Being, the statement also of perdurance and of Eternity: perdurance is the corresponding state arising from the [divine] substratum and inherent in it; Eternity [the Principle as distinguished from the property of everlastingness] is that substratum carrying that state in manifestation.

Eternity, thus, is of the order of the supremely great; it proves on investigation to be identical with God: it may fitly be described as God made manifest, as God declaring

what He is, as existence without jolt or change, and therefore as also the firmly living.

And it should be no shock that we find plurality in it; each of the Beings of the Supreme is multiple by virtue of unlimited force; for to be limitless implies failing at no point, and Eternity is pre-eminently the limitless since (having no past or future) it spends nothing of its own substance.

Thus a close enough definition of Eternity would be that it is a life limitless in the full sense of being all the life there is and a life which, knowing nothing of past or future to shatter its completeness, possesses itself intact for ever. To the notion of a Life (a Living-Principle) all-comprehensive add that it never spends itself, and we have the statement of a Life instantaneously infinite.

6. Now the Principle this stated, all good and beauty, and everlasting, is centred in The One, sprung from It, and pointed towards It, never straying from It, but ever holding about It and in It and living by Its law; and it is in this reference, as I judge, that Plato-finely, and by no means inadvertently but with profound intention- wrote those words of his, "Eternity stable in Unity"; he wishes to convey that Eternity is not merely something circling on its traces into a final unity but has [instantaneous] Being about The One as the unchanging Life of the Authentic Existent. This is certainly what we have been seeking: this Principle, at rest within rest with the One, is Eternity; possessing this stable quality, being itself at once the absolute self-identical and none the less the active manifestation of an unchanging Life set towards the Divine and dwelling within It, untrue, therefore, neither on the side of Being nor on the side of Life- this will be Eternity [the Real-Being we have sought].

Truly to be comports never lacking existence and never knowing variety in the mode of existence: Being is, therefore, self-identical throughout, and, therefore, again is one undistinguishable thing. Being can have no this and that; it cannot be treated in terms of intervals, unfoldings, progression, extension; there is no grasping any first or last in it.

If, then, there is no first or last in this Principle, if existence is its most authentic possession and its very self, and this in the sense that its existence is Essence or Life- then, once again, we meet here what we have been discussing, Eternity.

Observe that such words as "always," "never," "sometimes" must be taken as mere conveniences of exposition: thus "always- used in the sense not of time but of incorruptibility and endlessly complete scope- might set up the false notion of stage and interval. We might perhaps prefer to speak of "Being," without any attribute; but since this term is applicable to Essence and some writers have used the word "Essence" for things of process, we cannot convey our meaning to them without introducing some word carrying the notion of perdurance.

There is, of course, no difference between Being and Everlasting Being; just as there is none between a philosopher and a true philosopher: the attribute "true" came into use because there arose what masqueraded as philosophy; and for similar reasons "everlasting" was adjoined to "Being," and "Being" to "everlasting," and we have [the

tautology of] “Everlasting Being.” We must take this “Everlasting” as expressing no more than Authentic Being: it is merely a partial expression of a potency which ignores all interval or term and can look forward to nothing by way of addition to the All which it possesses. The Principle of which this is the statement will be the All-Existent, and, as being all, can have no failing or deficiency, cannot be at some one point complete and at some other lacking.

Things and Beings in the Time order- even when to all appearance complete, as a body is when fit to harbour a soul- are still bound to sequence; they are deficient to the extent of that thing, Time, which they need: let them have it, present to them and running side by side with them, and they are by that very fact incomplete; completeness is attributed to them only by an accident of language.

But the conception of Eternity demands something which is in its nature complete without sequence; it is not satisfied by something measured out to any remoter time or even by something limitless, but, in its limitless reach, still having the progression of futurity: it requires something immediately possessed of the due fullness of Being, something whose Being does not depend upon any quantity [such as instalments of time] but subsists before all quantity.

Itself having no quantity, it can have no contact with anything quantitative since its Life cannot be made a thing of fragments, in contradiction to the partlessness which is its character; it must be without parts in the Life as in the essence.

The phrase “He was good” [used by Plato of the Demiurge] refers to the Idea of the All; and its very indefiniteness signifies the utter absense of relation to Time: so that even this Universe has had no temporal beginning; and if we speak of something “before” it, that is only in the sense of the Cause from which it takes its Eternal Existence. Plato used the word merely for the convenience of exposition, and immediately corrects it as inappropriate to the order vested with the Eternity he conceives and affirms.

7. Now comes the question whether, in all this discussion, we are not merely helping to make out a case for some other order of Beings and talking of matters alien to ourselves.

But how could that be? What understanding can there be failing some point of contact? And what contact could there be with the utterly alien?

We must then have, ourselves, some part or share in Eternity.

Still, how is this possible to us who exist in Time?

The whole question turns on the distinction between being in Time and being in Eternity, and this will be best realized by probing to the Nature of Time. We must, therefore, descend from Eternity to the investigation of Time, to the realm of Time: till now we have been taking the upward way; we must now take the downward- not to the lowest levels but within the degree in which Time itself is a descent from Eternity.

If the venerable sages of former days had not treated of Time, our method would be to begin by linking to [the idea of] Eternity [the idea of] its Next [its inevitable downward or outgoing subsequent in the same order], then setting forth the probable nature of such a Next and proceeding to show how the conception thus formed tallies with our own doctrine.

But, as things are, our best beginning is to range over the most noteworthy of the ancient opinions and see whether any of them accord with ours.

Existing explanations of Time seem to fall into three classes:

Time is variously identified with what we know as Movement, with a moved object, and with some phenomenon of Movement: obviously it cannot be Rest or a resting object or any phenomenon of rest, since, in its characteristic idea, it is concerned with change.

Of those that explain it as Movement, some identify it with Absolute Movement [or with the total of Movement], others with that of the All. Those that make it a moved object would identify it with the orb of the All. Those that conceive it as some phenomenon, or some period, of Movement treat it, severally, either as a standard of measure or as something inevitably accompanying Movement, abstract or definite.

8. Movement Time cannot be- whether a definite act of moving is meant or a united total made up of all such acts- since movement, in either sense, takes place in Time. And, of course, if there is any movement not in Time, the identification with Time becomes all the less tenable.

In a word, Movement must be distinct from the medium in which it takes place.

And, with all that has been said or is still said, one consideration is decisive: Movement can come to rest, can be intermittent; Time is continuous.

We will be told that the Movement of the All is continuous [and so may be identical with Time].

But, if the reference is to the Circuit of the heavenly system [it is not strictly continuous, or equable, since] the time taken in the return path is not that of the outgoing movement; the one is twice as long as the other: this Movement of the All proceeds, therefore, by two different degrees; the rate of the entire journey is not that of the first half.

Further, the fact that we hear of the Movement of the outermost sphere being the swiftest confirms our theory. Obviously, it is the swiftest of movements by taking the lesser time to traverse the greater space the very greatest- all other moving things are slower by taking a longer time to traverse a mere segment of the same extension: in other words, Time is not this movement.

And, if Time is not even the movement of the Kosmic Sphere much less is it the sphere itself though that has been identified with Time on the ground of its being in motion.

Is it, then, some phenomenon or connection of Movement?

Let us, tentatively, suppose it to be extent, or duration, of Movement.

Now, to begin with, Movement, even continuous, has no unchanging extent [as Time the equable has], since, even in space, it may be faster or slower; there must, therefore, be some unit of standard outside it, by which these differences are measurable, and this outside standard would more properly be called Time. And failing such a measure, which extent would be Time, that of the fast or of the slow- or rather which of them all, since these speed-differences are limitless?

Is it the extent of the subordinate Movement [= movement of things of earth]?

Again, this gives us no unit since the movement is infinitely variable; we would have, thus, not Time but Times.

The extent of the Movement of the All, then?

The Celestial Circuit may, no doubt, be thought of in terms of quantity. It answers to measure- in two ways. First there is space; the movement is commensurate with the area it passes through, and this area is its extent. But this gives us, still, space only, not Time. Secondly, the circuit, considered apart from distance traversed, has the extent of its continuity, of its tendency not to stop but to proceed indefinitely: but this is merely amplitude of Movement; search it, tell its vastness, and, still, Time has no more appeared, no more enters into the matter, than when one certifies a high pitch of heat; all we have discovered is Motion in ceaseless succession, like water flowing ceaselessly, motion and extent of motion.

Succession or repetition gives us Number- dyad, triad, etc.- and the extent traversed is a matter of Magnitude; thus we have Quantity of Movement- in the form of number, dyad, triad, decade, or in the form of extent apprehended in what we may call the amount of the Movement: but, the idea of Time we have not. That definite Quantity is merely something occurring within Time, for, otherwise Time is not everywhere but is something belonging to Movement which thus would be its substratum or basic-stuff: once more, then, we would be making Time identical with Movement; for the extent of Movement is not something outside it but is simply its continuousness, and we need not halt upon the difference between the momentary and the continuous, which is simply one of manner and degree. The extended movement and its extent are not Time; they are in Time. Those that explain Time as extent of Movement must mean not the extent of the movement itself but something which determines its extension, something with which the movement keeps pace in its course. But what this something is, we are not told; yet it is, clearly, Time, that in which all Movement proceeds. This is what our discussion has aimed at from the first: "What, essentially, is Time?" It comes to this: we ask "What is Time?" and we are answered, "Time is the extension of Movement in

Time!"

On the one hand Time is said to be an extension apart from and outside that of Movement; and we are left to guess what this extension may be: on the other hand, it is represented as the extension of Movement; and this leaves the difficulty what to make of the extension of Rest- though one thing may continue as long in repose as another in motion, so that we are obliged to think of one thing Time that covers both Rest and Movements, and, therefore, stands distinct from either.

What then is this thing of extension? To what order of beings does it belong?

It obviously is not spatial, for place, too, is something outside it.

9. "A Number, a Measure, belonging to Movement?"

This, at least, is plausible since Movement is a continuous thin; but let us consider.

To begin with, we have the doubt which met us when we probed its identification with extent of Movement: is Time the measure of any and every Movement?

Have we any means of calculating disconnected and lawless Movement? What number or measure would apply? What would be the principle of such a Measure?

One Measure for movement slow and fast, for any and every movement: then that number and measure would be like the decade, by which we reckon horses and cows, or like some common standard for liquids and solids. If Time is this Kind of Measure, we learn, no doubt, of what objects it is a Measure- of Movements- but we are no nearer understanding what it is in itself.

Or: we may take the decade and think of it, apart from the horses or cows, as a pure number; this gives us a measure which, even though not actually applied, has a definite nature. Is Time, perhaps, a Measure in this sense?

No: to tell us no more of Time in itself than that it is such a number is merely to bring us back to the decade we have already rejected, or to some similar collective figure.

If, on the other hand, Time is [not such an abstraction but] a Measure possessing a continuous extent of its own, it must have quantity, like a foot-rule; it must have magnitude: it will, clearly, be in the nature of a line traversing the path of Movement. But, itself thus sharing in the movement, how can it be a Measure of Movement? Why should the one of the two be the measure rather than the other? Besides an accompanying measure is more plausibly considered as a measure of the particular movement it accompanies than of Movement in general. Further, this entire discussion assumes continuous movement, since the accompanying principle; Time, is itself unbroken [but a full explanation implies justification of Time in repose].

The fact is that we are not to think of a measure outside and apart, but of a combined

thing, a measured Movement, and we are to discover what measures it.

Given a Movement measured, are we to suppose the measure to be a magnitude?

If so, which of these two would be Time, the measured movement or the measuring magnitude? For Time [as measure] must be either the movement measured by magnitude, or the measuring magnitude itself or something using the magnitude like a yard-stick to appraise the movement. In all three cases, as we have indicated, the application is scarcely plausible except where continuous movement is assumed: unless the Movement proceeds smoothly, and even unintermittently and as embracing the entire content of the moving object, great difficulties arise in the identification of Time with any kind of measure.

Let us, then, suppose Time to be this “measured Movement,” measured by quantity. Now the Movement if it is to be measured requires a measure outside itself; this was the only reason for raising the question of the accompanying measure. In exactly the same way the measuring magnitude, in turn, will require a measure, because only when the standard shows such and such an extension can the degree of movement be appraised. Time then will be, not the magnitude accompanying the Movement, but that numerical value by which the magnitude accompanying the Movement is estimated. But that number can be only the abstract figure which represents the magnitude, and it is difficult to see how an abstract figure can perform the act of measuring.

And, supposing that we discover a way in which it can, we still have not Time, the measure, but a particular quantity of Time, not at all the same thing: Time means something very different from any definite period: before all question as to quantity is the question as to the thing of which a certain quantity is present.

Time, we are told, is the number outside Movement and measuring it, like the tens applied to the reckoning of the horses and cows but not inherent in them: we are not told what this Number is; yet, applied or not, it must, like that decade, have some nature of its own.

Or “it is that which accompanies a Movement and measures it by its successive stages”; but we are still left asking what this thing recording the stages may be.

In any case, once a thing- whether by point or standard or any other means- measures succession, it must measure according to time: this number appraising movement degree by degree must, therefore, if it is to serve as a measure at all, be something dependent upon time and in contact with it: for, either, degree is spatial, merely- the beginning and end of the Stadium, for example- or in the only alternative, it is a pure matter of Time: the succession of early and late is stage of Time, Time ending upon a certain Now or Time beginning from a Now.

Time, therefore, is something other than the mere number measuring Movement, whether Movement in general or any particular tract of Movement.

Further: Why should the mere presence of a number give us Time- a number measuring or measured; for the same number may be either- if Time is not given us by the fact of Movement itself, the Movement which inevitably contains in itself a succession of stages? To make the number essential to Time is like saying that magnitude has not its full quantity unless we can estimate that quantity.

Again, if Time is, admittedly, endless, how can number apply to it?

Are we to take some portion of Time and find its numerical statement? That simply means that Time existed before number was applied to it.

We may, therefore, very well think that it existed before the Soul or Mind that estimates it- if, indeed, it is not to be thought to take its origin from the Soul- for no measurement by anything is necessary to its existence; measured or not, it has the full extent of its being.

And suppose it to be true that the Soul is the appraiser, using Magnitude as the measuring standard, how does this help us to the conception of Time?

10. Time, again, has been described as some sort of a sequence upon Movement, but we learn nothing from this, nothing is said, until we know what it is that produces this sequential thing: probably the cause and not the result would turn out to be Time.

And, admitting such a thing, there would still remain the question whether it came into being before the movement, with it, or after it; and, whether we say before or with or after, we are speaking of order in Time: and thus our definition is "Time is a sequence upon movement in Time!"

Enough: Our main purpose is to show what Time is, not to refute false definition. To traverse point by point the many opinions of our many predecessors would mean a history rather than an identification; we have treated the various theories as fully as is possible in a cursory review: and, notice, that which makes Time the Measure of the All-Movement is refuted by our entire discussion and, especially, by the observations upon the Measurement of Movement in general, for all the argument- except, of course, that from irregularity- applies to the All as much as to particular Movement.

We are, thus, at the stage where we are to state what Time really is.

11. To this end we must go back to the state we affirmed of Eternity, unwavering Life, undivided totality, limitless, knowing no divagation, at rest in unity and intent upon it. Time was not yet: or at least it did not exist for the Eternal Beings, though its being was implicit in the Idea and Principle of progressive derivation.

But from the Divine Beings thus at rest within themselves, how did this Time first emerge?

We can scarcely call upon the Muses to recount its origin since they were not in

existence then- perhaps not even if they had been. The engendered thing, Time, itself, can best tell us how it rose and became manifest; something thus its story would run:

Time at first- in reality before that "first" was produced by desire of succession- Time lay, self-concentrated, at rest within the Authentic Existent: it was not yet Time; it was merged in the Authentic and motionless with it. But there was an active principle there, one set on governing itself and realizing itself [= the All-Soul], and it chose to aim at something more than its present: it stirred from its rest, and Time stirred with it. And we, stirring to a ceaseless succession, to a next, to the discrimination of identity and the establishment of ever-new difference, traversed a portion of the outgoing path and produced an image of Eternity, produced Time.

For the Soul contained an unquiet faculty, always desirous of translating elsewhere what it saw in the Authentic Realm, and it could not bear to retain within itself all the dense fullness of its possession.

A Seed is at rest; the nature-principle within, uncoiling outwards, makes way towards what seems to it a large life; but by that partition it loses; it was a unity self-gathered, and now, in going forth from itself, it fritters its unity away; it advances into a weaker greatness. It is so with this faculty of the Soul, when it produces the Kosmos known to sense- the mimic of the Divine Sphere, moving not in the very movement of the Divine but in its similitude, in an effort to reproduce that of the Divine. To bring this Kosmos into being, the Soul first laid aside its eternity and clothed itself with Time; this world of its fashioning it then gave over to be a servant to Time, making it at every point a thing of Time, setting all its progressions within the bournes of Time. For the Kosmos moves only in Soul- the only Space within the range of the All open to it to move in- and therefore its Movement has always been in the Time which inheres in Soul.

Putting forth its energy in act after act, in a constant progress of novelty, the Soul produces succession as well as act; taking up new purposes added to the old it brings thus into being what had not existed in that former period when its purpose was still dormant and its life was not as it since became: the life is changed and that change carries with it a change of Time. Time, then, is contained in differentiation of Life; the ceaseless forward movement of Life brings with it unending Time; and Life as it achieves its stages constitutes past Time.

Would it, then, be sound to define Time as the Life of the Soul in movement as it passes from one stage of act or experience to another?

Yes; for Eternity, we have said, is Life in repose, unchanging, self-identical, always endlessly complete; and there is to be an image of Eternity-Time- such an image as this lower All presents of the Higher Sphere. Therefore over against that higher life there must be another life, known by the same name as the more veritable life of the Soul; over against that movement of the Intellectual Soul there must be the movement of some partial phase; over against that identity, unchangeableness and stability there must be that which is not constant in the one hold but puts forth multitudinous acts; over against that oneness without extent or interval there must be an image of oneness, a

unity of link and succession; over against the immediately infinite and all-comprehending, that which tends, yes, to infinity but by tending to a perpetual futurity; over against the Whole in concentration, there must be that which is to be a Whole by stages never final. The lesser must always be working towards the increase of its Being, this will be its imitation of what is immediately complete, self-realized, endless without stage: only thus can its Being reproduce that of the Higher.

Time, however, is not to be conceived as outside of Soul; Eternity is not outside of the Authentic Existent: nor is it to be taken as a sequence or succession to Soul, any more than Eternity is to the Divine. It is a thing seen upon Soul, inherent, coeval to it, as Eternity to the Intellectual Realm.

12. We are brought thus to the conception of a Natural-Principle- Time- a certain expanse [a quantitative phase] of the Life of the Soul, a principle moving forward by smooth and uniform changes following silently upon each other- a Principle, then, whose Act is sequent.

But let us conceive this power of the Soul to turn back and withdraw from the life-course which it now maintains, from the continuous and unending activity of an ever-existent soul not self-contained or self-intent but concerned about doing and engendering: imagine it no longer accomplishing any Act, setting a pause to this work it has inaugurated; let this outgoing phase of the Soul become once more, equally with the rest, turned to the Supreme, to Eternal Being, to the tranquilly stable.

What would then exist but Eternity?

All would remain in unity; how could there be any diversity of things? What Earlier or Later would there be, what long-lasting or short-lasting? What ground would lie ready to the Soul's operation but the Supreme in which it has its Being? Or, indeed, what operative tendency could it have even to That since a prior separation is the necessary condition of tendency?

The very sphere of the Universe would not exist; for it cannot antedate Time: it, too, has its Being and its Movement in Time; and if it ceased to move, the Soul-Act [which is the essence of Time] continuing, we could measure the period of its Repose by that standard outside it.

If, then, the Soul withdrew, sinking itself again into its primal unity, Time would disappear: the origin of Time, clearly, is to be traced to the first stir of the Soul's tendency towards the production of the sensible universe with the consecutive act ensuing. This is how "Time"- as we read- "came into Being simultaneously" with this All: the Soul begot at once the Universe and Time; in that activity of the Soul this Universe sprang into being; the activity is Time, the Universe is a content of Time. No doubt it will be urged that we read also of the orbit of the Stars being Times": but do not forget what follows; "the stars exist," we are told, "for the display and delimitation of Time," and "that there may be a manifest Measure." No indication of Time could be derived from [observation of] the Soul; no portion of it can be seen or handled, so it could not be

measured in itself, especially when there was as yet no knowledge of counting; therefore the Soul brings into being night and day; in their difference is given Duality- from which, we read, arises the concept of Number.

We observe the tract between a sunrise and its return and, as the movement is uniform, we thus obtain a Time-interval upon which to measure ourselves, and we use this as a standard. We have thus a measure of Time. Time itself is not a measure. How would it set to work? And what kind of thing is there of which it could say, "I find the extent of this equal to such and such a stretch of my own extent?" What is this "I"? Obviously something by which measurement is known. Time, then, serves towards measurement but is not itself the Measure: the Movement of the All will be measured according to Time, but Time will not, of its own Nature, be a Measure of Movement: primarily a Kind to itself, it will incidentally exhibit the magnitudes of that movement.

And the reiterated observation of Movement- the same extent found to be traversed in such and such a period- will lead to the conception of a definite quantity of Time past.

This brings us to the fact that, in a certain sense, the Movement, the orbit of the universe, may legitimately be said to measure Time- in so far as that is possible at all- since any definite stretch of that circuit occupies a certain quantity of Time, and this is the only grasp we have of Time, our only understanding of it: what that circuit measures- by indication, that is- will be Time, manifested by the Movement but not brought into being by it.

This means that the measure of the Spheric Movement has itself been measured by a definite stretch of that Movement and therefore is something different; as measure, it is one thing and, as the measured, it is another; [its being measure or] its being measured cannot be of its essence.

We are no nearer knowledge than if we said that the foot-rule measures Magnitude while we left the concept Magnitude undefined; or, again, we might as well define Movement- whose limitlessness puts it out of our reach- as the thing measured by Space; the definition would be parallel since we can mark off a certain space which the Movement has traversed and say the one is equivalent to the other.

13. The Spheral Circuit, then, performed in Time, indicates it: but when we come to Time itself there is no question of its being "within" something else: it must be primary, a thing "within itself." It is that in which all the rest happens, in which all movement and rest exist smoothly and under order; something following a definite order is necessary to exhibit it and to make it a subject of knowledge- though not to produce it- it is known by order whether in rest or in motion; in motion especially, for Movement better moves Time into our ken than rest can, and it is easier to estimate distance traversed than repose maintained.

This last fact has led to Time being called a measure of Movement when it should have been described as something measured by Movement and then defined in its essential nature; it is an error to define it by a mere accidental concomitant and so to reverse the

actual order of things. Possibly, however, this reversal was not intended by the authors of the explanation: but, at any rate, we do not understand them; they plainly apply the term Measure to what is in reality the measured and leave us unable to grasp their meaning: our perplexity may be due to the fact that their writings- addressed to disciples acquainted with their teaching- do not explain what this thing, measure, or measured object, is in itself.

Plato does not make the essence of Time consist in its being either a measure or a thing measured by something else.

Upon the point of the means by which it is known, he remarks that the Circuit advances an infinitesimal distance for every infinitesimal segment of Time so that from that observation it is possible to estimate what the Time is, how much it amounts to: but when his purpose is to explain its essential nature he tells us that it sprang into Being simultaneously with the Heavenly system, a reproduction of Eternity, its image in motion, Time necessarily unresting as the Life with which it must keep pace: and "coeval with the Heavens" because it is this same Life [of the Divine Soul] which brings the Heavens also into being; Time and the Heavens are the work of the one Life.

Suppose that Life, then, to revert- an impossibility- to perfect unity: Time, whose existence is in that Life, and the Heavens, no longer maintained by that Life, would end at once.

It is the height of absurdity to fasten on the succession of earlier and later occurring in the life and movement of this sphere of ours, to declare that it must be some definite thing and to call it Time, while denying the reality of the more truly existent Movement, that of the Soul, which has also its earlier and later: it cannot be reasonable to recognize succession in the case of the Soulless Movement- and so to associate Time with that- while ignoring succession and the reality of Time in the Movement from which the other takes its imitative existence; to ignore, that is, the very Movement in which succession first appears, a self-actuated movement which, engendering its own every operation, is the source of all that follows upon itself, to all which, it is the cause of existence, at once, and of every consequent.

But:- we treat the Kosmic Movement as overarched by that of the Soul and bring it under Time; yet we do not set under Time that Soul-Movement itself with all its endless progression: what is our explanation of this paradox?

Simply, that the Soul-Movement has for its Prior Eternity which knows neither its progression nor its extension. The descent towards Time begins with this Soul-Movement; it made Time and harbours Time as a concomitant to its Act.

And this is how Time is omnipresent: that Soul is absent from no fragment of the Kosmos just as our Soul is absent from no particle of ourselves. As for those who pronounce Time a thing of no substantial existence, of no reality, they clearly belie God Himself whenever they say "He was" or "He will be": for the existence indicated by the "was and will be" can have only such reality as belongs to that in which it is said to be

situated:- but this school demands another type of argument.

Meanwhile we have a supplementary observation to make.

Take a man walking and observe the advance he has made; that advance gives you the quantity of movement he is employing: and when you know that quantity- represented by the ground traversed by his feet, for, of course, we are supposing the bodily movement to correspond with the pace he has set within himself- you know also the movement that exists in the man himself before the feet move.

You must relate the body, carried forward during a given period of Time, to a certain quantity of Movement causing the progress and to the Time it takes, and that again to the Movement, equal in extension, within the man's soul.

But the Movement within the Soul- to what are you to (relate) refer that?

Let your choice fall where it may, from this point there is nothing but the unextended: and this is the primarily existent, the container to all else, having itself no container, brooking none.

And, as with Man's Soul, so with the Soul of the All.

"Is Time, then, within ourselves as well?"

Time in every Soul of the order of the All-Soul, present in like form in all; for all the Souls are the one Soul.

And this is why Time can never be broken apart, any more than Eternity which, similarly, under diverse manifestations, has its Being as an integral constituent of all the eternal Existences.

EIGHTH TRACTATE.

NATURE CONTEMPLATION AND THE ONE.

1. Supposing we played a little before entering upon our serious concern and maintained that all things are striving after Contemplation, looking to Vision as their one end- and this, not merely beings endowed with reason but even the unreasoning animals, the Principle that rules in growing things, and the Earth that produces these- and that all achieve their purpose in the measure possible to their kind, each attaining Vision and possessing itself of the End in its own way and degree, some things in entire reality, others in mimicry and in image- we would scarcely find anyone to endure so strange a thesis. But in a discussion entirely among ourselves there is no risk in a light handling of our own ideas.

Well- in the play of this very moment am I engaged in the act of Contemplation?

Yes; I and all that enter this play are in Contemplation: our play aims at Vision; and there is every reason to believe that child or man, in sport or earnest, is playing or working only towards Vision, that every act is an effort towards Vision; the compulsory act, which tends rather to bring the Vision down to outward things, and the act thought of as voluntary, less concerned with the outer, originate alike in the effort towards Vision.

The case of Man will be treated later on; let us speak, first, of the earth and of the trees and vegetation in general, asking ourselves what is the nature of Contemplation in them, how we relate to any Contemplative activity the labour and productiveness of the earth, how Nature, held to be devoid of reason and even of conscious representation, can either harbour Contemplation or produce by means of the Contemplation which it does not possess.

2. There is, obviously, no question here of hands or feet, of any implement borrowed or inherent: Nature needs simply the Matter which it is to work upon and bring under Form; its productivity cannot depend upon mechanical operation. What driving or hoisting goes to produce all that variety of colour and pattern?

The wax-workers, whose methods have been cited as parallel to the creative act of Nature, are unable to make colours; all they can do to impose upon their handicraft colours taken from elsewhere. None the less there is a parallel which demands attention: in the case of workers in such arts there must be something locked within themselves, an efficacy not going out from them and yet guiding their hands in all their creation; and this observation should have indicated a similar phenomenon in Nature; it should be clear that this indwelling efficacy, which makes without hands, must exist in Nature, no less than in the craftsman- but, there, as a thing completely inbound. Nature need possess no outgoing force as against that remaining within; the only moved thing is Matter; there can be no moved phase in this Nature-Principle; any such moved phase could not be the primal mover; this Nature-Principle is no such moved entity; it is the unmoved Principle operating in the Kosmos.

We may be answered that the Reason-Principle is, no doubt, unmoved, but that the Nature-Principle, another being, operates by motion.

But, if Nature entire is in question here, it is identical with the Reason-Principle; and any part of it that is unmoved is the Reason-Principle. The Nature-Principle must be an Ideal-Form, not a compound of Form and Matter; there is no need for it to possess Matter, hot and cold: the Matter that underlies it, on which it exercises its creative act, brings all that with it, or, natively without quality, becomes hot and cold, and all the rest, when brought under Reason: Matter, to become fire, demands the approach not of fire but of a Reason-Principle.

This is no slight evidence that in the animal and vegetable realms the Reason-Principles are the makers and that Nature is a Reason-Principle producing a second Reason-Principle, its offspring, which, in turn, while itself, still, remaining intact, communicates something to the underlie, Matter.

The Reason-Principle presiding over visible Shape is the very ultimate of its order, a dead thing unable to produce further: that which produces in the created realm is the living Reason-Principle- brother no doubt, to that which gives mere shape, but having life-giving power.

3. But if this Reason-Principle [Nature] is in act- and produces by the process indicated- how can it have any part in Contemplation?

To begin with, since in all its production it is stationary and intact, a Reason-Principle self-indwelling, it is in its own nature a Contemplative act. All doing must be guided by an Idea, and will therefore be distinct from that Idea: the Reason-Principle then, as accompanying and guiding the work, will be distinct from the work; not being action but Reason-Principle it is, necessarily, Contemplation. Taking the Reason-Principle, the Logos, in all its phases, the lowest and last springs from a mental act [in the higher Logos] and is itself a contemplation, though only in the sense of being contemplated, but above it stands the total Logos with its two distinguishable phases, first, that identified not as Nature but as All-Soul and, next, that operating in Nature and being itself the Nature-Principle.

And does this Reason-Principle, Nature, spring from a contemplation?

Wholly and solely?

From self-contemplation, then? Or what are we to think? It derives from a Contemplation and some contemplating Being; how are we to suppose it to have Contemplation itself?

The Contemplation springing from the reasoning faculty- that, I mean, of planning its own content, it does not possess.

But why not, since it is a phase of Life, a Reason-Principle and a creative Power?

Because to plan for a thing is to lack it: Nature does not lack; it creates because it possesses. Its creative act is simply its possession of its own characteristic Essence; now its Essence, since it is a Reason-Principle, is to be at once an act of contemplation and an object of contemplation. In other words, the Nature-Principle produces by virtue of being an act of contemplation, an object of contemplation and a Reason-Principle; on this triple character depends its creative efficacy.

Thus the act of production is seen to be in Nature an act of contemplation, for creation is the outcome of a contemplation which never becomes anything else, which never does anything else, but creates by simply being a contemplation.

4. And Nature, asked why it brings forth its works, might answer if it cared to listen and to speak:

“It would have been more becoming to put no question but to learn in silence just as I myself am silent and make no habit of talking. And what is your lesson? This; that whatsoever comes into being is my vision, seen in my silence, the vision that belongs to my character who, sprung from vision, am vision-loving and create vision by the vision-seeing faculty within me. The mathematicians from their vision draw their figures: but I draw nothing: I gaze and the figures of the material world take being as if they fell from my contemplation. As with my Mother (the All-Soul] and the Beings that begot me so it is with me: they are born of a Contemplation and my birth is from them, not by their Act but by their Being; they are the loftier Reason-Principles, they contemplate themselves and I am born.”

Now what does this tell us?

It tells: that what we know as Nature is a Soul, offspring of a yet earlier Soul of more powerful life; that it possesses, therefore, in its repose, a vision within itself; that it has no tendency upward nor even downward but is at peace, steadfast, in its own Essence; that, in this immutability accompanied by what may be called Self-Consciousness, it possesses- within the measure of its possibility- a knowledge of the realm of subsequent things perceived in virtue of that understanding and consciousness; and, achieving thus a resplendent and delicious spectacle, has no further aim.

Of course, while it may be convenient to speak of “understanding” or “perception” in the Nature-Principle, this is not in the full sense applicable to other beings; we are applying to sleep a word borrowed from the wake.

For the Vision on which Nature broods, inactive, is a self-intuition, a spectacle laid before it by virtue of its unaccompanied self-concentration and by the fact that in itself it belongs to the order of intuition. It is a Vision silent but somewhat blurred, for there exists another a clearer of which Nature is the image: hence all that Nature produces is weak; the weaker act of intuition produces the weaker object.

In the same way, human beings, when weak on the side of contemplation, find in action their trace of vision and of reason: their spiritual feebleness unfits them for contemplation; they are left with a void, because they cannot adequately seize the vision; yet they long for it; they are hurried into action as their way to the vision which they cannot attain by intellection. They act from the desire of seeing their action, and of making it visible and sensible to others when the result shall prove fairly well equal to the plan. Everywhere, doing and making will be found to be either an attenuation or a complement of vision-attenuation if the doer was aiming only at the thing done; complement if he is to possess something nobler to gaze upon than the mere work produced.

Given the power to contemplate the Authentic, who would run, of choice, after its image?

The relation of action to contemplation is indicated in the way duller children, inapt to study and speculation, take to crafts and manual labour.

5. This discussion of Nature has shown us how the origin of things is a Contemplation: we may now take the matter up to the higher Soul; we find that the Contemplation pursued by this, its instinct towards knowing and enquiring, the birth pangs set up by the knowledge it attains, its teeming fullness, have caused it- in itself, all one object of Vision- to produce another Vision [that of the Kosmos]: it is just as a given science, complete in itself, becomes the source and cause of what might be called a minor science in the student who attains to some partial knowledge of all its divisions. But the visible objects and the objects of intellectual contemplation of this later creation are dim and helpless by the side of the content of the Soul.

The primal phase of the Soul- inhabitant of the Supreme and, by its participation in the Supreme, filled and illuminated- remains unchangeably There; but in virtue of that first participation, that of the primal participant, a secondary phase also participates in the Supreme, and this secondary goes forth ceaselessly as Life streaming from Life; for energy runs through the Universe and there is no extremity at which it dwindles out. But, travel as far as it may, it never draws that first part of itself from the place whence the outgoing began: if it did, it would no longer be everywhere [its continuous Being would be broken and] it would be present at the end, only, of its course.

None the less that which goes forth cannot be equal to that which remains.

In sum, then:

The Soul is to extend throughout the Universe, no spot void of its energy: but, a prior is always different from its secondary, and energy is a secondary, rising as it must from contemplation or act; act, however, is not at this stage existent since it depends upon contemplation: therefore the Soul, while its phases differ, must, in all of them, remain a contemplation and what seems to be an act done under contemplation must be in reality that weakened contemplation of which we have spoken: the engendered must respect the Kind, but in weaker form, dwindled in the descent.

All goes softly since nothing here demands the parade of thought or act upon external things: it is a Soul in vision and, by this vision, creating its own subsequent- this Principle [of Nature], itself also contemplative but in the feebler degree since it lies further away and cannot reproduce the quality or experiences of its prior- a Vision creates the Vision.

[Such creative contemplation is not inexplicable] for no limit exists either to contemplation or to its possible objects, and this explains how the Soul is universal: where can this thing fail to be, which is one identical thing in every Soul; Vision is not cabined within the bournes of magnitude.

This, of course, does not mean that the Soul is present at the same strength in each and every place and thing- any more than that it is at the same strength in each of its own phases.

The Charioteer [the Leading Principle of the Soul, in the Phaedrus Myth] gives the two horses [its two dissonant faculties] what he has seen and they, taking that gift, showed that they were hungry for what made that vision; there was something lacking to them: if in their desire they acted, their action aimed at what they craved for- and that was vision, and an object of vision.

6. Action, thus, is set towards contemplation and an object of contemplation, so that even those whose life is in doing have seeing as their object; what they have not been able to achieve by the direct path, they hope to come at by the circuit.

Further: suppose they succeed; they desired a certain thing to come about, not in order to be unaware of it but to know it, to see it present before the mind: their success is the laying up of a vision. We act for the sake of some good; this means not for something to remain outside ourselves, not in order that we possess nothing but that we may hold the good of the action. And hold it, where? Where but in the mind?

Thus once more, action is brought back to contemplation: for [mind or] Soul is a Reason-Principle and anything that one lays up in the Soul can be no other than a Reason-Principle, a silent thing, the more certainly such a principle as the impression made is the deeper.

This vision achieved, the acting instinct pauses; the mind is satisfied and seeks nothing further; the contemplation, in one so conditioned, remains absorbed within as having acquired certainty to rest upon. The brighter the certainty, the more tranquil is the contemplation as having acquired the more perfect unity; and- for now we come to the serious treatment of the subject-

In proportion to the truth with which the knowing faculty knows, it comes to identification with the object of its knowledge.

As long as duality persists, the two lie apart, parallel as it were to each other; there is a pair in which the two elements remain strange to one another, as when Ideal-Principles laid up in the mind or Soul remain idle.

Hence the Idea must not be left to lie outside but must be made one identical thing with the soul of the novice so that he finds it really his own.

The Soul, once domiciled within that Idea and brought to likeness with it, becomes productive, active; what it always held by its primary nature it now grasps with knowledge and applies in deed, so becoming, as it were, a new thing and, informed as it now is by the purely intellectual, it sees [in its outgoing act] as a stranger looking upon a strange world. It was, no doubt, essentially a Reason-Principle, even an Intellectual Principle; but its function is to see a [lower] realm which these do not see.

For, it is not a complete thing: it has a lack; it is incomplete in regard to its Prior; yet it, also, has a tranquil vision of what it produces. What it has once brought into being it produces no more, for all its productiveness is determined by this lack: it produces for

the purpose of Contemplation, in the desire of knowing all its content: when there is question of practical things it adapts its content to the outside order.

The Soul has a greater content than Nature has and therefore it is more tranquil; it is more nearly complete and therefore more contemplative. It is, however, not perfect, and is all the more eager to penetrate the object of contemplation, and it seeks the vision that comes by observation. It leaves its native realm and busies itself elsewhere; then it returns, and it possesses its vision by means of that phase of itself from which it had parted. The self-indwelling Soul inclines less to such experiences.

The Sage, then, is the man made over into a Reason-Principle: to others he shows his act but in himself he is Vision: such a man is already set, not merely in regard to exterior things but also within himself, towards what is one and at rest: all his faculty and life are inward-bent.

7. Certain Principles, then, we may take to be established- some self-evident, others brought out by our treatment above:

All the forms of Authentic Existence spring from vision and are a vision. Everything that springs from these Authentic Existences in their vision is an object of vision-manifest to sensation or to true knowledge or to surface-awareness. All act aims at this knowing; all impulse is towards knowledge, all that springs from vision exists to produce Ideal-Form, that is a fresh object of vision, so that universally, as images of their engendering principles, they all produce objects of vision, Ideal-forms. In the engendering of these sub-existences, imitations of the Authentic, it is made manifest that the creating powers operate not for the sake of creation and action but in order to produce an object of vision. This same vision is the ultimate purpose of all the acts of the mind and, even further downward, of all sensation, since sensation also is an effort towards knowledge; lower still, Nature, producing similarly its subsequent principle, brings into being the vision and Idea that we know in it. It is certain, also, that as the Firsts exist in vision all other things must be straining towards the same condition; the starting point is, universally, the goal.

When living things reproduce their Kind, it is that the Reason-Principles within stir them; the procreative act is the expression of a contemplation, a travail towards the creation of many forms, many objects of contemplation, so that the universe may be filled full with Reason-Principles and that contemplation may be, as nearly as possible, endless: to bring anything into being is to produce an Idea-Form and that again is to enrich the universe with contemplation: all the failures, alike in being and in doing, are but the swerving of visionaries from the object of vision: in the end the sorriest craftsman is still a maker of forms, ungracefully. So Love, too, is vision with the pursuit of Ideal-Form.

8. From this basis we proceed:

In the advancing stages of Contemplation rising from that in Nature, to that in the Soul and thence again to that in the Intellectual-Principle itself- the object contemplated becomes progressively a more and more intimate possession of the Contemplating

Beings, more and more one thing with them; and in the advanced Soul the objects of knowledge, well on the way towards the Intellectual-Principle, are close to identity with their container.

Hence we may conclude that, in the Intellectual-Principle Itself, there is complete identity of Knower and Known, and this not by way of domiciliation, as in the case of even the highest soul, but by Essence, by the fact that, there, no distinction exists between Being and Knowing; we cannot stop at a principle containing separate parts; there must always be a yet higher, a principle above all such diversity.

The Supreme must be an entity in which the two are one; it will, therefore, be a Seeing that lives, not an object of vision like things existing in something other than themselves: what exists in an outside element is some mode of living-thing; it is not the Self-Living.

Now admitting the existence of a living thing that is at once a Thought and its object, it must be a Life distinct from the vegetative or sensitive life or any other life determined by Soul.

In a certain sense no doubt all lives are thoughts- but qualified as thought vegetative, thought sensitive and thought psychic.

What, then, makes them thoughts?

The fact that they are Reason-Principles. Every life is some form of thought, but of a dwindling clearness like the degrees of life itself. The first and clearest Life and the first Intelligence are one Being. The First Life, then, is an Intellection and the next form of Life is the next Intellection and the last form of Life is the last form of Intellection. Thus every Life, of the order strictly so called, is an Intellection.

But while men may recognize grades in life they reject grade in thought; to them there are thoughts [full and perfect] and anything else is no thought.

This is simply because they do not seek to establish what Life is.

The essential is to observe that, here again, all reasoning shows that whatever exists is a bye-work of visioning: if, then, the truest Life is such by virtue of an Intellection and is identical with the truest Intellection, then the truest Intellection is a living being; Contemplation and its object constitute a living thing, a Life, two inextricably one.

The duality, thus, is a unity; but how is this unity also a plurality?

The explanation is that in a unity there can be no seeing [a pure unity has no room for vision and an object]; and in its Contemplation the One is not acting as a Unity; if it were, the Intellectual-Principle cannot exist. The Highest began as a unity but did not remain as it began; all unknown to itself, it became manifold; it grew, as it were, pregnant: desiring universal possession, it flung itself outward, though it were better had it never known the desire by which a Secondary came into being: it is like a Circle [in

the Idea] which in projection becomes a figure, a surface, a circumference, a centre, a system of radii, of upper and lower segments. The Whence is the better; the Whither is less good: the Whence is not the same as the Whence-followed-by-a-Whither; the Whence all alone is greater than with the Whither added to it.

The Intellectual-Principle on the other hand was never merely the Principle of an inviolable unity; it was a universal as well and, being so, was the Intellectual-Principle of all things. Being, thus, all things and the Principle of all, it must essentially include this part of itself [this element-of-plurality] which is universal and is all things: otherwise, it contains a part which is not Intellectual-Principle: it will be a juxtaposition of non-Intellectuals, a huddled heap waiting to be made over from the mass of things into the Intellectual-Principle!

We conclude that this Being is limitless and that, in all the outflow from it, there is no lessening either in its emanation, since this also is the entire universe, nor in itself, the starting point, since it is no assemblage of parts [to be diminished by any outgo].

9. Clearly a Being of this nature is not the primal existent; there must exist that which transcends it, that Being [the Absolute], to which all our discussion has been leading.

In the first place, Plurality is later than Unity. The Intellectual-Principle is a number [= the expression of a plurality]; and number derives from unity: the source of a number such as this must be the authentically One. Further, it is the sum of an Intellectual-Being with the object of its Intellection, so that it is a duality; and, given this duality, we must find what exists before it.

What is this?

The Intellectual-Principle taken separately, perhaps?

No: an Intellect is always inseparable from an intelligible object; eliminate the intelligible, and the Intellectual-Principle disappears with it. If, then, what we are seeking cannot be the Intellectual-Principle but must be something that rejects the duality there present, then the Prior demanded by that duality must be something on the further side of the Intellectual-Principle.

But might it not be the Intelligible object itself?

No: for the Intelligible makes an equally inseparable duality with the Intellectual-Principle.

If, then, neither the Intellectual-Principle nor the Intelligible Object can be the First Existent, what is?

Our answer can only be:

The source of both.

What will This be; under what character can we picture It?

It must be either Intellective or without Intellection: if Intellective it is the Intellectual-Principle; if not, it will be without even knowledge of itself- so that, either way, what is there so august about it?

If we define it as The Good and the wholly simplex, we will, no doubt, be telling the truth, but we will not be giving any certain and lucid account of it as long as we have in mind no entity in which to lodge the conception by which we define it.

Yet: our knowledge of everything else comes by way of our intelligence; our power is that of knowing the intelligible by means of the intelligence: but this Entity transcends all of the intellectual nature; by what direct intuition, then, can it be brought within our grasp?

To this question the answer is that we can know it only in the degree of human faculty: we indicate it by virtue of what in ourselves is like it.

For in us, also, there is something of that Being; nay, nothing, ripe for that participation, can be void of it.

Wherever you be, you have only to range over against this omnipresent Being that in you which is capable of drawing from It, and you have your share in it: imagine a voice sounding over a vast waste of land, and not only over the emptiness alone but over human beings; wherever you be in that great space you have but to listen and you take the voice entire- entire though yet with a difference.

And what do we take when we thus point the Intelligence?

The Intellectual-Principle in us must mount to its origins: essentially a thing facing two ways, it must deliver itself over to those powers within it which tend upward; if it seeks the vision of that Being, it must become something more than Intellect.

For the Intellectual-Principle is the earliest form of Life: it is the Activity presiding over the outflowing of the universal Order- the outflow, that is, of the first moment, not that of the continuous process.

In its character as Life, as emanation, as containing all things in their precise forms and not merely in the agglomerate mass- for this would be to contain them imperfectly and inarticulately- it must of necessity derive from some other Being, from one that does not emanate but is the Principle of Emanation, of Life, of Intellect and of the Universe.

For the Universe is not a Principle and Source: it springs from a source, and that source cannot be the All or anything belonging to the All, since it is to generate the All, and must be not a plurality but the Source of plurality, since universally a begetting power is less complex than the begotten. Thus the Being that has engendered the

Intellectual-Principle must be more simplex than the Intellectual-Principle.

We may be told that this engendering Principle is the One-and-All.

But, at that, it must be either each separate entity from among all or it will be all things in the one mass.

Now if it were the massed total of all, it must be of later origin than any of the things of which it is the sum; if it precedes the total, it differs from the things that make up the total and they from it: if it and the total of things constitute a co-existence, it is not a Source. But what we are probing for must be a Source; it must exist before all, that all may be fashioned as sequel to it.

As for the notion that it may be each separate entity of the All, this would make a self-Identity into a what you like, where you like, indifferently, and would, besides, abolish all distinction in things themselves.

Once more we see that this can be no thing among things but must be prior to all things.

10. And what will such a Principle essentially be?

The potentiality of the Universe: the potentiality whose non-existence would mean the non-existence of all the Universe and even of the Intellectual-Principle which is the primal Life and all Life.

This Principle on the thither side of Life is the cause of Life- for that Manifestation of Life which is the Universe of things is not the First Activity; it is itself poured forth, so to speak, like water from a spring.

Imagine a spring that has no source outside itself; it gives itself to all the rivers, yet is never exhausted by what they take, but remains always integrally as it was; the tides that proceed from it are at one within it before they run their several ways, yet all, in some sense, know beforehand down what channels they will pour their streams.

Or: think of the Life coursing throughout some mighty tree while yet it is the stationary Principle of the whole, in no sense scattered over all that extent but, as it were, vested in the root: it is the giver of the entire and manifold life of the tree, but remains unmoved itself, not manifold but the Principle of that manifold life.

And this surprises no one: though it is in fact astonishing how all that varied vitality springs from the unvarying, and how that very manifoldness could not be unless before the multiplicity there were something all singleness; for, the Principle is not broken into parts to make the total; on the contrary, such partition would destroy both; nothing would come into being if its cause, thus broken up, changed character.

Thus we are always brought back to The One.

Every particular thing has a One of its own to which it may be traced; the All has its One, its Prior but not yet the Absolute One; through this we reach that Absolute One, where all such reference comes to an end.

Now when we reach a One- the stationary Principle- in the tree, in the animal, in Soul, in the All- we have in every case the most powerful, the precious element: when we come to the One in the Authentically Existent Beings- their Principle and source and potentiality- shall we lose confidence and suspect it of being-nothing?

Certainly this Absolute is none of the things of which it is the source- its nature is that nothing can be affirmed of it- not existence, not essence, not life- since it is That which transcends all these. But possess yourself of it by the very elimination of Being and you hold a marvel. Thrusting forward to This, attaining, and resting in its content, seek to grasp it more and more- understanding it by that intuitive thrust alone, but knowing its greatness by the Beings that follow upon it and exist by its power.

Another approach:

The Intellectual-Principle is a Seeing, and a Seeing which itself sees; therefore it is a potentiality which has become effective.

This implies the distinction of Matter and Form in it- as there must be in all actual seeing- the Matter in this case being the Intelligibles which the Intellectual-Principle contains and sees. All actual seeing implies duality; before the seeing takes place there is the pure unity [of the power of seeing]. That unity [of principle] acquires duality [in the act of seeing], and the duality is [always to be traced back to] a unity.

Now as our sight requires the world of sense for its satisfaction and realization, so the vision in the Intellectual-Principle demands, for its completion, The Good.

It cannot be, itself, The Good, since then it would not need to see or to perform any other Act; for The Good is the centre of all else, and it is by means of The Good that every thing has Act, while the Good is in need of nothing and therefore possesses nothing beyond itself.

Once you have uttered "The Good," add no further thought: by any addition, and in proportion to that addition, you introduce a deficiency.

Do not even say that it has Intellection; you would be dividing it; it would become a duality, Intellect and the Good. The Good has no need of the Intellectual-Principle which, on the contrary, needs it, and, attaining it, is shaped into Goodness and becomes perfect by it: the Form thus received, sprung from the Good, brings it to likeness with the Good.

Thus the traces of the Good discerned upon it must be taken as indication of the nature of that Archetype: we form a conception of its Authentic Being from its image playing upon the Intellectual-Principle. This image of itself, it has communicated to the Intellect

that contemplates it: thus all the striving is on the side of the Intellect, which is the eternal striver and eternally the attainer. The Being beyond neither strives, since it feels no lack, nor attains, since it has no striving. And this marks it off from the Intellectual-Principle, to which characteristically belongs the striving, the concentrated strain towards its Form.

Yet: The Intellectual-Principle; beautiful; the most beautiful of all; lying lapped in pure light and in clear radiance; circumscribing the Nature of the Authentic Existents; the original of which this beautiful world is a shadow and an image; tranquil in the fullness of glory since in it there is nothing devoid of intellect, nothing dark or out of rule; a living thing in a life of blessedness: this, too, must overwhelm with awe any that has seen it, and penetrated it, to become a unit of its Being.

But: As one that looks up to the heavens and sees the splendour of the stars thinks of the Maker and searches, so whoever has contemplated the Intellectual Universe and known it and wondered for it must search after its Maker too. What Being has raised so noble a fabric? And where? And how? Who has begotten such a child, this Intellectual-Principle, this lovely abundance so abundantly endowed?

The Source of all this cannot be an Intellect; nor can it be an abundant power: it must have been before Intellect and abundance were; these are later and things of lack; abundance had to be made abundant and Intellection needed to know.

These are very near to the un-needing, to that which has no need of Knowing, they have abundance and intellection authentically, as being the first to possess. But, there is that before them which neither needs nor possesses anything, since, needing or possessing anything else, it would not be what it is- the Good.

NINTH TRACTATE.

DETACHED CONSIDERATIONS.

1. "The Intellectual-Principle" [= the Divine Mind]- we read [in the Timaeus]- "looks upon the Ideas indwelling in that Being which is the Essentially Living [= according to Plotinus, the Intellectual Realm], "and then"- the text proceeds- "the Creator judged that all the content of that essentially living Being must find place in this lower universe also."

Are we meant to gather that the Ideas came into being before the Intellectual-Principle so that it "sees them" as previously existent?

The first step is to make sure whether the "Living Being" of the text is to be distinguished from the Intellectual-Principle as another thing than it.

It might be argued that the Intellectual-Principle is the Contemplator and therefore that the Living-Being contemplated is not the Intellectual-Principle but must be described as the Intellectual Object so that the Intellectual-Principle must possess the Ideal realm as something outside of itself.

But this would mean that it possesses images and not the realities, since the realities are in the Intellectual Realm which it contemplates: Reality- we read- is in the Authentic Existent which contains the essential form of particular things.

No: even though the Intellectual-Principle and the Intellectual Object are distinct, they are not apart except for just that distinction.

Nothing in the statement cited is inconsistent with the conception that these two constitute one substance- though, in a unity, admitting that distinction, of the intellectual act [as against passivity], without which there can be no question of an Intellectual-Principle and an Intellectual Object: what is meant is not that the contemplatory Being possesses its vision as in some other principle, but that it contains the Intellectual Realm within itself.

The Intelligible Object is the Intellectual-Principle itself in its repose, unity, immobility: the Intellectual-Principle, contemplator of that object- of the Intellectual-Principle thus in repose is an active manifestation of the same Being, an Act which contemplates its unmoved phase and, as thus contemplating, stands as Intellectual-Principle to that of which it has the intellection: it is Intellectual-Principle in virtue of having that intellection, and at the same time is Intellectual Object, by assimilation.

This, then, is the Being which planned to create in the lower Universe what it saw existing in the Supreme, the four orders of living beings.

No doubt the passage: [of the Timaeus] seems to imply tacitly that this planning Principle is distinct from the other two: but the three- the Essentially-Living, the Intellectual-Principle and this planning Principle will, to others, be manifestly one: the truth is that, by a common accident, a particular trend of thought has occasioned the discrimination.

We have dealt with the first two; but the third- this Principle which decides to work upon the objects [the Ideas] contemplated by the Intellectual-Principle within the Essentially-Living, to create them, to establish them in their partial existence- what is this third?

It is possible that in one aspect the Intellectual-Principle is the principle of partial existence, while in another aspect it is not.

The entities thus particularized from the unity are products of the Intellectual-Principle which thus would be, to that extent, the separating agent. On the other hand it remains in itself, indivisible; division begins with its offspring which, of course, means with Souls: and thus a Soul- with its particular Souls- may be the separative principle.

This is what is conveyed where we are told that the separation is the work of the third Principle and begins within the Third: for to this Third belongs the discursive reasoning which is no function of the Intellectual-Principle but characteristic of its secondary, of

Soul, to which precisely, divided by its own Kind, belongs the Act of division.

2.... For in any one science the reduction of the total of knowledge into its separate propositions does not shatter its unity, chipping it into unrelated fragments; in each distinct item is latent the entire body of the science, an integral thing in its highest Principle and its last detail: and similarly a man must so discipline himself that the first Principles of his Being are also his completions, are totals, that all be pointed towards the loftiest phase of the Nature: when a man has become this unity in the best, he is in that other realm; for it is by this highest within himself, made his own, that he holds to the Supreme.

At no point did the All-Soul come into Being: it never arrived, for it never knew place; what happens is that body, neighbouring with it, participates in it: hence Plato does not place Soul in body but body in Soul. The others, the secondary Souls, have a point of departure- they come from the All-Soul- and they have a Place into which to descend and in which to change to and fro, a place, therefore, from which to ascend: but this All-Soul is for ever Above, resting in that Being in which it holds its existence as Soul and followed, as next, by the Universe or, at least, by all beneath the sun.

The partial Soul is illuminated by moving towards the Soul above it; for on that path it meets Authentic Existence. Movement towards the lower is towards non-Being: and this is the step it takes when it is set on self; for by willing towards itself it produces its lower, an image of itself- a non-Being- and so is wandering, as it were, into the void, stripping itself of its own determined form. And this image, this undetermined thing, is blank darkness, for it is utterly without reason, untouched by the Intellectual-Principle, far removed from Authentic Being.

As long as it remains at the mid-stage it is in its own peculiar region; but when, by a sort of inferior orientation, it looks downward, it shapes that lower image and flings itself joyfully thither.

3. (A)... How, then, does Unity give rise to Multiplicity?

By its omnipresence: there is nowhere where it is not; it occupies, therefore, all that is; at once, it is manifold- or, rather, it is all things.

If it were simply and solely everywhere, all would be this one thing alone: but it is, also, in no place, and this gives, in the final result, that, while all exists by means of it, in virtue of its omnipresence, all is distinct from it in virtue of its being nowhere.

But why is it not merely present everywhere but in addition nowhere-present?

Because, universality demands a previous unity. It must, therefore, pervade all things and make all, but not be the universe which it makes.

(B) The Soul itself must exist as Seeing- with the Intellectual-Principle as the object of its vision- it is undetermined before it sees but is naturally apt to see: in other words,

Soul is Matter to [its determinant] the Intellectual-Principle.

(C) When we exercise intellection upon ourselves, we are, obviously, observing an intellective nature, for otherwise we would not be able to have that intellection.

We know, and it is ourselves that we know; therefore we know the reality of a knowing nature: therefore, before that intellection in Act, there is another intellection, one at rest, so to speak.

Similarly, that self-intellection is an act upon a reality and upon a life; therefore, before the Life and Real-Being concerned in the intellection, there must be another Being and Life. In a word, intellection is vested in the activities themselves: since, then, the activities of self-intellection are intellective-forms, We, the Authentic We, are the Intelligibles and self-intellection conveys the Image of the Intellectual Sphere.

(D) The Primal is a potentiality of Movement and of Repose- and so is above and beyond both- its next subsequent has rest and movement about the Primal. Now this subsequent is the Intellectual-Principle- so characterized by having intellection of something not identical with itself whereas the Primal is without intellection. A knowing principle has duality [that entailed by being the knower of something) and, moreover, it knows itself as deficient since its virtue consists in this knowing and not in its own bare Being.

(E) In the case of everything which has developed from possibility to actuality the actual is that which remains self-identical for its entire duration- and this it is which makes perfection possible even in things of the corporeal order, as for instance in fire but the actual of this kind cannot be everlasting since [by the fact of their having once existed only in potentiality] Matter has its place in them. In anything, on the contrary, not composite [= never touched by Matter or potentiality] and possessing actuality, that actual existence is eternal... There is, however, the case, also in which a thing, itself existing in actuality, stands as potentiality to some other form of Being.

(F)... But the First is not to be envisaged as made up from Gods of a transcendent order: no; the Authentic Existents constitute the Intellectual-Principle with Which motion and rest begin. The Primal touches nothing, but is the centre round which those other Beings lie in repose and in movement. For Movement is aiming, and the Primal aims at nothing; what could the Summit aspire to?

Has It, even, no Intellection of Itself?

It possesses Itself and therefore is said in general terms to know itself... But intellection does not mean self-ownership; it means turning the gaze towards the Primal: now the act of intellection is itself the Primal Act, and there is therefore no place for any earlier one. The Being projecting this Act transcends the Act so that Intellection is secondary to the Being in which it resides. Intellection is not the transcendently venerable thing- neither Intellection in general nor even the Intellection of The Good. Apart from and over any Intellection stands The Good itself.

The Good therefore needs no consciousness.

What sort of consciousness can be conceived in it?

Consciousness of the Good as existent or non-existent?

If of existent Good, that Good exists before and without any such consciousness: if the act of consciousness produces that Good, then The Good was not previously in existence- and, at once, the very consciousness falls to the ground since it is, no longer consciousness of The Good.

But would not all this mean that the First does not even live?

The First cannot be said to live since it is the source of Life.

All that has self-consciousness and self-intellection is derivative; it observes itself in order, by that activity, to become master of its Being: and if it study itself this can mean only that ignorance inheres in it and that it is of its own nature lacking and to be made perfect by Intellection.

All thinking and knowing must, here, be eliminated: the addition introduces deprivation and deficiency.

First Tractate

On the Essence of the Soul 1. In the Intellectual Kosmos dwells Authentic Essence, with the Intellectual-Principle [Divine Mind] as the noblest of its content, but containing also souls, since every soul in this lower sphere has come thence: that is the world of unembodied spirits while to our world belong those that have entered body and undergone bodily division.

There the Intellectual-Principle is a concentrated all- nothing of it distinguished or divided- and in that kosmos of unity all souls are concentrated also, with no spatial discrimination.

But there is a difference:

The Intellectual-Principle is for ever repugnant to distinction and to partition. Soul, there without distinction and partition, has yet a nature lending itself to divisional existence: its division is secession, entry into body.

In view of this seceding and the ensuing partition we may legitimately speak of it as a partible thing.

But if so, how can it still be described as indivisible?

In that the secession is not of the soul entire; something of it holds its ground, that in it which recoils from separate existence.

The entity, therefore, described as “consisting of the undivided soul and of the soul divided among bodies,” contains a soul which is at once above and below, attached to the Supreme and yet reaching down to this sphere, like a radius from a centre.

Thus it is that, entering this realm, it possesses still the vision inherent to that superior phase in virtue of which it unchangingly maintains its integral nature. Even here it is not exclusively the partible soul: it is still the impartible as well: what in it knows partition is parted without partibility; undivided as giving itself to the entire body, a whole to a whole, it is divided as being effective in every part.

SECOND TRACTATE.

ON THE ESSENCE OF THE SOUL (2).

1. In our attempt to elucidate the Essence of the soul, we show it to be neither a

material fabric nor, among immaterial things, a harmony. The theory that it is some final development, some entelechy, we pass by, holding this to be neither true as presented nor practically definitive.

No doubt we make a very positive statement about it when we declare it to belong to the Intellectual Kind, to be of the divine order; but a deeper penetration of its nature is demanded.

In that allocation we were distinguishing things as they fall under the Intellectual or the sensible, and we placed the soul in the former class; now, taking its membership of the Intellectual for granted, we must investigate by another path the more specific characteristics of its nature.

There are, we hold, things primarily apt to partition, tending by sheer nature towards separate existence: they are things in which no part is identical either with another part or with the whole, while, also their part is necessarily less than the total and whole: these are magnitudes of the realm of sense, masses, each of which has a station of its own so that none can be identically present in entirety at more than one point at one time.

But to that order is opposed Essence [Real-Being]; this is in no degree susceptible of partition; it is unparted and impartible; interval is foreign to it, cannot enter into our idea of it: it has no need of place and is not, in diffusion or as an entirety, situated within any other being: it is poised over all beings at once, and this is not in the sense of using them as a base but in their being neither capable nor desirous of existing independently of it; it is an essence eternally unvaried: it is common to all that follows upon it: it is like the circle's centre to which all the radii are attached while leaving it unbrokenly in possession of itself, the starting point of their course and of their essential being, the ground in which they all participate: thus the indivisible is the principle of these divided existences and in their very outgoing they remain enduringly in contact with that stationary essence.

So far we have the primarily indivisible- supreme among the Intellectual and Authentically Existent- and we have its contrary, the Kind definitely divisible in things of sense; but there is also another Kind, of earlier rank than the sensible yet near to it and resident within it- an order, not, like body, primarily a thing of part, but becoming so upon incorporation. The bodies are separate, and the ideal form which enters them is correspondingly sundered while, still, it is present as one whole in each of its severed parts, since amid that multiplicity in which complete individuality has entailed complete partition, there is a permanent identity; we may think of colour, qualities of all kinds, some particular shape, which can be present in many unrelated objects at the one moment, each entire and yet with no community of experience among the various manifestations. In the case of such ideal-forms we may affirm complete partibility.

But, on the other hand, that first utterly indivisible Kind must be accompanied by a subsequent Essence, engendered by it and holding indivisibility from it but, in virtue of the necessary outgo from source, tending firmly towards the contrary, the wholly

partible; this secondary Essence will take an intermediate Place between the first substance, the undivided, and that which is divisible in material things and resides in them. Its presence, however, will differ in one respect from that of colour and quantity; these, no doubt, are present identically and entire throughout diverse material masses, but each several manifestation of them is as distinct from every other as the mass is from the mass.

The magnitude present in any mass is definitely one thing, yet its identity from part to part does not imply any such community as would entail common experience; within that identity there is diversity, for it is a condition only, not the actual Essence.

The Essence, very near to the impartible, which we assert to belong to the Kind we are now dealing with, is at once an Essence and an entrant into body; upon embodiment, it experiences a partition unknown before it thus bestowed itself.

In whatsoever bodies it occupies- even the vastest of all, that in which the entire universe is included- it gives itself to the whole without abdicating its unity.

This unity of an Essence is not like that of body, which is a unit by the mode of continuous extension, the mode of distinct parts each occupying its own space. Nor is it such a unity as we have dealt with in the case of quality.

The nature, at once divisible and indivisible, which we affirm to be soul has not the unity of an extended thing: it does not consist of separate sections; its divisibility lies in its presence at every point of the recipient, but it is indivisible as dwelling entire in the total and entire in any part.

To have penetrated this idea is to know the greatness of the soul and its power, the divinity and wonder of its being, as a nature transcending the sphere of Things.

Itself devoid of mass, it is present to all mass: it exists here and yet is There, and this not in distinct phases but with unsundered identity: thus it is "parted and not parted," or, better, it has never known partition, never become a parted thing, but remains a self-gathered integral, and is "parted among bodies" merely in the sense that bodies, in virtue of their own sundered existence, cannot receive it unless in some partitive mode; the partition, in other words, is an occurrence in body not in soul.

2. It can be demonstrated that soul must, necessarily, be of just this nature and that there can be no other soul than such a being, one neither wholly partible but both at once.

If it had the nature of body it would consist of isolated members each unaware of the conditions of every other; there would be a particular soul- say a soul of the finger- answering as a distinct and independent entity to every local experience; in general terms, there would be a multiplicity of souls administering each individual; and, moreover, the universe would be governed not by one soul but by an incalculable number, each standing apart to itself. But, without a dominant unity, continuity is

meaningless.

The theory that "Impressions reach the leading-principle by progressive stages" must be dismissed as mere illusion.

In the first place, it affirms without investigation a "leading" phase of the soul.

What can justify this assigning of parts to the soul, the distinguishing one part from another? What quantity, or what difference of quality, can apply to a thing defined as a self-consistent whole of unbroken unity?

Again, would perception be vested in that leading principle alone, or in the other phases as well?

If a given experience bears only on that "leading principle," it would not be felt as lodged in any particular members of the organism; if, on the other hand, it fastens on some other phase of the soul- one not constituted for sensation- that phase cannot transmit any experience to the leading principle, and there can be no sensation.

Again, suppose sensation vested in the "leading-principle" itself: then, a first alternative, it will be felt in some one part of that [some specifically sensitive phase], the other part excluding a perception which could serve no purpose; or, in the second alternative, there will be many distinct sensitive phases, an infinite number, with difference from one to another. In that second case, one sensitive phase will declare "I had this sensation primarily"; others will have to say "I felt the sensation that rose elsewhere"; but either the site of the experience will be a matter of doubt to every phase except the first, or each of the parts of the soul will be deceived into allocating the occurrence within its own particular sphere.

If, on the contrary, the sensation is vested not merely in the "leading principle," but in any and every part of the soul, what special function raises the one rather than the other into that leading rank, or why is the sensation to be referred to it rather than elsewhere? And how, at this, account for the unity of the knowledge brought in by diverse senses, by eyes, by ears?

On the other hand, if the soul is a perfect unity- utterly strange to part, a self-gathered whole- if it continuously eludes all touch of multiplicity and divisibility- then, no whole taken up into it can ever be ensouled; soul will stand as circle-centre to every object [remote on the circumference], and the entire mass of a living being is soulless still.

There is, therefore, no escape: soul is, in the degree indicated, one and many, parted and impartible. We cannot question the possibility of a thing being at once a unity and multi-present, since to deny this would be to abolish the principle which sustains and administers the universe; there must be a Kind which encircles and supports all and conducts all with wisdom, a principle which is multiple since existence is multiple, and yet is one soul always since a container must be a unity: by the multiple unity of its nature, it will furnish life to the multiplicity of the series of an all; by its impartible unity, it

will conduct a total to wise ends.

In the case of things not endowed with intelligence, the “leading-principle” is their mere unity- a lower reproduction of the soul's efficiency.

This is the deeper meaning of the profound passage [in the Timaeus], where we read “By blending the impartible, eternally unchanging essence with that in division among bodies, he produced a third form of essence partaking of both qualities.”

Soul, therefore, is, in this definite sense, one and many; the Ideal-Form resident in body is many and one; bodies themselves are exclusively many; the Supreme is exclusively one.

THIRD TRACTATE.

PROBLEMS OF THE SOUL (1).

1. The soul: what dubious questions concerning it admit of solution, or where we must abide our doubt- with, at least, the gain of recognizing the problem that confronts us- this is matter well worth attention. On what subject can we more reasonably expend the time required by minute discussion and investigation? Apart from much else, it is enough that such an enquiry illuminates two grave questions: of what sphere the soul is the principle, and whence the soul itself springs. Moreover, we will be only obeying the ordinance of the God who bade us know ourselves.

Our general instinct to seek and learn, our longing to possess ourselves of whatsoever is lovely in the vision will, in all reason, set us enquiring into the nature of the instrument with which we search.

Now even in the universal Intellect [Divine Mind] there was duality, so that we would expect differences of condition in things of part: how some things rather than others come to be receptacles of the divine beings will need to be examined; but all this we may leave aside until we are considering the mode in which soul comes to occupy body. For the moment we return to our argument against those who maintain our souls to be offshoots from the soul of the universe [parts and an identity modally parted].

Our opponents will probably deny the validity of our arguments against the theory that the human soul is a mere segment of the All-Soul- the considerations, namely, that it is of identical scope, and that it is intellective in the same degree, supposing them, even, to admit that equality of intellection.

They will object that parts must necessarily fall under one ideal-form with their wholes. And they will adduce Plato as expressing their view where, in demonstrating that the All is ensouled, he says “As our body is a portion of the body of the All, so our soul is a portion of the soul of the All.” It is admitted on clear evidence that we are borne along by the Circuit of the All; we will be told that- taking character and destiny from it, strictly inbound with it- we must derive our souls, also, from what thus bears us up, and that as

within ourselves every part absorbs from our soul so, analogically, we, standing as parts to the universe, absorb from the Soul of the All as parts of it. They will urge also that the dictum "The collective soul cares for all the unensouled," carries the same implication and could be uttered only in the belief that nothing whatever of later origin stands outside the soul of the universe, the only soul there can be there to concern itself with the unensouled.

2. To this our first answer is that to place certain things under one identical class- by admitting an identical range of operation- is to make them of one common species, and puts an end to all mention of part; the reasonable conclusion would be, on the contrary, that there is one identical soul, every separate manifestation being that soul complete.

Our opponents after first admitting the unity go on to make our soul dependent on something else, something in which we have no longer the soul of this or that, even of the universe, but a soul of nowhere, a soul belonging neither to the kosmos, nor to anything else, and yet vested with all the function inherent to the kosmic soul and to that of every ensouled thing.

The soul considered as an entirety cannot be a soul of any one given thing- since it is an Essence [a divine Real-Being]- or, at least, there must be a soul which is not exclusively the soul of any particular thing, and those attached to particulars must so belong merely in some mode of accident.

In such questions as this it is important to clarify the significance of "part."

Part, as understood of body- uniform or varied- need not detain us; it is enough to indicate that, when part is mentioned in respect of things whose members are alike, it refers to mass and not to ideal-form [specific idea]: take for example, whiteness: the whiteness in a portion of milk is not a part of the whiteness of milk in general: we have the whiteness of a portion not a portion of whiteness; for whiteness is utterly without magnitude; has nothing whatever to do with quantity.

That is all we need say with regard to part in material things; but part in the unembodied may be taken in various ways. We may think of it in the sense familiar in numbers, "two" a part of the standard "ten"- in abstract numbers of course- or as we think of a segment of a circle, or line [abstractly considered], or, again, of a section or branch of knowledge.

In the case of the units of reckoning and of geometrical figure, exactly as in that of corporeal masses, partition must diminish the total; the part must be less than the whole; for these are things of quantity, and have their being as things of quantity; and- since they are not the ideal-form Quantity- they are subject to increase and decrease.

Now in such a sense as this, part cannot be affirmed of the soul.

The soul is not a thing of quantity; we are not to conceive of the All-Soul as some standard ten with particular souls as its constituent units.

Such a conception would entail many absurdities:

The Ten could not be [essentially] a unity [the Soul would be an aggregation, not a self-standing Real-Being] and, further- unless every one of the single constituents were itself an All-Soul- the All-Soul would be formed of non-souls.

Again, it is admitted that the particular soul- this “part of the All-Soul- is of one ideal-form with it, but this does not entail the relation of part to whole, since in objects formed of continuous parts there is nothing inevitably making any portion uniform with the total: take, for example, the parts of a circle or square; we may divide it in different ways so as to get our part; a triangle need not be divided into triangles; all sorts of different figures are possible: yet an absolute uniformity is admitted to reign throughout soul.

In a line, no doubt, the part is inevitably a line; but even here there is a necessary difference in size; and if, in the case of the soul we similarly called upon magnitude as the distinction between constituents and collective soul, then soul, thus classed by magnitude becomes quantitative, and is simply body.

But it is admitted that all souls are alike and are entireties; clearly, soul is not subject to part in the sense in which magnitudes are: our opponents themselves would not consent to the notion of the All-Soul being whittled down into fragments, yet this is what they would be doing, annulling the All-Soul- if any collective soul existed at all- making it a mere piece of terminology, thinking of it like wine separated into many portions, each portion, in its jar, being described as a portion of the total thing, wine.

Next there is the conception of the individual soul as a part in the sense in which we speak of some single proposition as a part of the science entire.

The theorem is separate, but the science stands as one undivided thing, the expression and summed efficiency [energy] of each constituent notion: this is partition without severance; each item potentially includes the whole science, which itself remains an unbroken total.

Is this the appropriate parallel?

No; in such a relationship the All-Soul, of which the particular souls are to be a part, would not be the soul of any definite thing, but an entity standing aloof; that means that it would not even be the soul of the Kosmos; it would, in fact, be, itself, one of those partial souls; thus all alike would be partial and of one nature; and, at that, there would be no reason for making any such distinction.

3. Is it a question of part in the sense that, taking one living being, the soul in a finger might be called a part of the soul entire?

This would carry the alternative that either there is no soul outside of body, or that- no soul being within body- the thing described as the soul of the universe is, none the less, outside the body of the universe. That is a point to be investigated, but for the present

we must consider what kind of soul this parallel would give us.

If the particular soul is a part of the All-Soul only in the sense that this bestows itself upon all living things of the partial sphere, such a self-bestowal does not imply division; on the contrary, it is the identical soul that is present everywhere, the one complete thing, multi-present at the one moment: there is no longer question of a soul that is a part against a soul that is an all- especially where an identical power is present. Even difference of function, as in eyes and ears, cannot warrant the assertion of distinct parts concerned in each separate act- with other parts again making allotment of faculty- all is met by the notion of one identical thing, but a thing in which a distinct power operates in each separate function. All the powers are present either in seeing or in hearing; the difference in impression received is due to the difference in the organs concerned; all the varying impressions are our various responses to Ideal-forms that can be taken in a variety of modes.

A further proof [of the unity of Soul] is that perception demands a common gathering place; every organ has its distinct function, and is competent only upon its own material, and must interpret each several experience in its own fashion; the judgement upon these impressions must, then, be vested in some one principle, a judge informed upon all that is said and done.

But again: "Everywhere, Unity": in the variety of functions if each "part of the soul" were as distinct as are the entrant sensations, none of those parts could have knowledge; awareness would belong only to that judging faculty- or, if local, every such act of awareness would stand quite unrelated to any other. But since the soul is a rational soul, by the very same title by which it is an All-Soul, and is called the rational soul, in the sense of being a whole [and so not merely "reasoning locally"], then what is thought of as a part must in reality be no part but the identity of an unparted thing.

4. But if this is the true account of the unity of soul, we must be able to meet the problems that ensue: firstly, the difficulty of one thing being present at the same moment in all things; and, secondly, the difficulty of soul in body as against soul not embodied.

We might be led to think that all soul must always inhabit body; this would seem especially plausible in the case of the soul of the universe, not thought of as ever leaving its body as the human soul does: there exists, no doubt, an opinion that even the human soul, while it must leave the body, cannot become an utterly disembodied thing; but assuming its complete disembodiment, how comes it that the human soul can go free of the body but the All-Soul not, though they are one and the same?

There is no such difficulty in the case of the Intellectual-Principle; by the primal differentiation, this separates, no doubt, into partial things of widely varying nature, but eternal unity is secured by virtue of the eternal identity of that Essence: it is not so easy to explain how, in the case of the soul described as separate among bodies, such differentiated souls can remain one thing.

A possible solution may be offered:

The unit soul holds aloof, not actually falling into body; the differentiated souls- the All-Soul, with the others- issue from the unity while still constituting, within certain limits, an association. They are one soul by the fact that they do not belong unreservedly to any particular being; they meet, so to speak, fringe to fringe; they strike out here and there, but are held together at the source much as light is a divided thing upon earth, shining in this house, and that, and yet remains uninterruptedly one identical substance.

The All-Soul would always remain above, since essentially it has nothing to do with descent or with the lower, or with any tendency towards this sphere: the other souls would become ours [become "partial," individual in us] because their lot is cast for this sphere, and because they are solicited by a thing [the body] which invites their care.

The one- the lowest soul in the to the All-Soul- would correspond to that in some great growth, silently, unlaboriously conducting the whole; our own lowest soul might be compared to the insect life in some rotted part of the growth- for this is the ratio of the animated body to the universe- while the other soul in us, of one ideal nature with the higher parts of the All-Soul, may be imaged as the gardener concerned about the insects lodged in the tree and anxiously working to amend what is wrong; or we may contrast a healthy man living with the healthy and, by his thought or by his act, lending himself to the service of those about him, with, on the other side, a sick man intent upon his own care and cure, and so living for the body, body-bound.

5. But what place is left for the particular souls, yours and mine and another's?

May we suppose the Soul to be appropriated on the lower ranges to some individual, but to belong on the higher to that other sphere?

At this there would be a Socrates as long as Socrates' soul remained in body; but Socrates ceases to exist, precisely on attainment of the highest.

Now nothing of Real Being is ever annulled.

In the Supreme, the Intellectual-Principles are not annulled, for in their differentiation there is no bodily partition, no passing of each separate phase into a distinct unity; every such phase remains in full possession of that identical being. It is exactly so with the souls.

By their succession they are linked to the several Intellectual-Principles, for they are the expression, the Logos, of the Intellectual-Principles, of which they are the unfolding; brevity has opened out to multiplicity; by that point of their being which least belongs to the partial order, they are attached each to its own Intellectual original: they have already chosen the way of division; but to the extreme they cannot go; thus they keep, at once, identification and difference; each soul is permanently a unity [a self] and yet all are, in their total, one being.

Thus the gist of the matter is established: one soul the source of all; those others, as a many founded in that one, are, on the analogy of the Intellectual-Principle, at once divided and undivided; that Soul which abides in the Supreme is the one expression or Logos of the Intellectual-Principle, and from it spring other Reason-Principles, partial but immaterial, exactly as in the differentiation of the Supreme.

6. But how comes it that while the All-Soul has produced a kosmos, the soul of the particular has not, though it is of the one ideal Kind and contains, it too, all things in itself?

We have indicated that a thing may enter and dwell at the same time in various places; this ought to be explained, and the enquiry would show how an identity resident simultaneously here and there may, in its separate appearances, act or react- or both- after distinct modes; but the matter deserves to be examined in a special discussion.

To return, then: how and why has the All-Soul produced a kosmos, while the particular souls simply administer some one part of it?

In the first place, we are not surprised when men of identical knowledge differ greatly in effective power.

But the reason, we will be asked.

The answer might be that there is an even greater difference among these souls, the one never having fallen away from the All-Soul, but dwelling within it and assuming body therein, while the others received their allotted spheres when the body was already in existence, when their sister soul was already in rule and, as it were, had already prepared habitations for them. Again, the reason may be that the one [the creative All-Soul] looks towards the universal Intellectual-Principle [the exemplar of all that can be], while the others are more occupied with the Intellectual within themselves, that which is already of the sphere of part; perhaps, too, these also could have created, but that they were anticipated by that originator- the work accomplished before them- an impediment inevitable whichever of the souls were first to operate.

But it is safer to account for the creative act by nearer connection with the over-world; the souls whose tendency is exercised within the Supreme have the greater power; immune in that pure seat they create securely; for the greater power takes the least hurt from the material within which it operates; and this power remains enduringly attached to the over-world: it creates, therefore, self gathered and the created things gather round it; the other souls, on the contrary, themselves go forth; that can mean only that they have deserted towards the abyss; a main phase in them is drawn downward and pulls them with it in the desire towards the lower.

The "secondary and tertiary souls," of which we hear, must be understood in the sense of closer or remoter position: it is much as in ourselves the relation to the Supreme is not identical from soul to soul; some of us are capable of becoming Uniate, others of striving and almost attaining, while a third rank is much less apt; it is a matter of the

degree or powers of the soul by which our expression is determined- the first degree dominant in the one person, the second, the third [the merely animal life] in others while, still, all of us contain all the powers.

7. So far, so good: but what of the passage in the Philebus taken to imply that the other souls are parts of the All-Soul?

The statement there made does not bear the meaning read into it; it expresses only, what the author was then concerned with, that the heavens are ensouled- a teaching which he maintains in the observation that it is preposterous to make the heavens soulless when we, who contain a part of the body of the All, have a soul; how, he asks, could there be soul in the part and none in the total.

He makes his teaching quite clear in the Timaeus, where he shows us the other souls brought into existence after the All-Soul, but compounded from the same mixing bowl"; secondary and tertiary are duly marked off from the primal but every form of soul is presented as being of identical ideal-nature with the All-Soul.

As for saying of the Phaedrus. "All that is soul cares for all that is soulless," this simply tells us that the corporeal kind cannot be controlled- fashioned, set in place or brought into being- by anything but the Soul. And we cannot think that there is one soul whose nature includes this power and another without it. "The perfect soul, that of the All," we read, "going its lofty journey, operates upon the kosmos not by sinking into it, but, as it were, by brooding over it"; and "every perfect soul exercises this governance"; he distinguishes the other, the soul in this sphere as "the soul when its wing is broken."

As for our souls being entrained in the kosmic circuit, and taking character and condition thence; this is no indication that they are parts: soul-nature may very well take some tincture from even the qualities of place, from water and from air; residence in this city or in that, and the varying make-up of the body may have their influence [upon our human souls which, yet, are no parts of place or of body].

We have always admitted that as members of the universe we take over something from the All-Soul; we do not deny the influence of the Kosmic Circuit; but against all this we oppose another soul in us [the Intellectual as distinguished from the merely vitalizing] proven to be distinct by that power of opposition.

As for our being begotten children of the kosmos, we answer that in motherhood the entrant soul is distinct, is not the mother's.

8. These considerations, amounting to the settlement of the question, are not countered by the phenomenon of sympathy; the response between soul and soul is due to the mere fact that all spring from that self-same soul [the next to Divine Mind] from which springs the Soul of the All.

We have already stated that the one soul is also multiple; and we have dealt with the different forms of relationship between part and whole: we have investigated the

different degrees existing within soul; we may now add, briefly, that differences might be induced, also, by the bodies with which the soul has to do, and, even more, by the character and mental operations carried over from the conduct of the previous lives. "The life-choice made by a soul has a correspondence"- we read- "with its former lives."

As regards the nature of soul in general, the differences have been defined in the passage in which we mentioned the secondary and tertiary orders and laid down that, while all souls are all-comprehensive, each ranks according to its operative phase- one becoming Uniate in the achieved fact, another in knowledge, another in desire, according to the distinct orientation by which each is, or tends to become, what it looks upon. The very fulfillment and perfectionment attainable by souls cannot but be different.

But, if in the total the organization in which they have their being is compact of variety- as it must be since every Reason-Principle is a unity of multiplicity and variety, and may be thought of as a psychic animated organism having many shapes at its command- if this is so and all constitutes a system in which being is not cut adrift from being, if there is nothing chance- borne among beings as there is none even in bodily organisms, then it follows that Number must enter into the scheme; for, once again, Being must be stable; the members of the Intellectual must possess identity, each numerically one; this is the condition of individuality. Where, as in bodily masses, the Idea is not essentially native, and the individuality is therefore in flux, existence under ideal form can rise only out of imitation of the Authentic Existences; these last, on the contrary, not rising out of any such conjunction [as the duality of Idea and dead Matter] have their being in that which is numerically one, that which was from the beginning, and neither becomes what it has not been nor can cease to be what it is.

Even supposing Real-Beings [such as soul] to be produced by some other principle, they are certainly not made from Matter; or, if they were, the creating principle must infuse into them, from within itself, something of the nature of Real-Being; but, at this, it would itself suffer change, as it created more or less. And, after all, why should it thus produce at any given moment rather than remain for ever stationary?

Moreover the produced total, variable from more to less, could not be an eternal: yet the soul, it stands agreed, is eternal.

But what becomes of the soul's infinity if it is thus fixed?

The infinity is a matter of power: there is question, not of the soul's being divisible into an infinite number of parts, but of an infinite possible effectiveness: it is infinity in the sense in which the Supreme God, also, is free of all bound.

This means that it is no external limit that defines the individual being or the extension of souls any more than of God; on the contrary each in right of its own power is all that it chooses to be: and we are not to think of it as going forth from itself [losing its unity by any partition]: the fact is simply that the element within it, which is apt to entrance into body, has the power of immediate projection any whither: the soul is certainly not

wrenched asunder by its presence at once in foot and in finger. Its presence in the All is similarly unbroken; over its entire range it exists in every several part of everything having even vegetal life, even in a part cut off from the main; in any possible segment it is as it is at its source. For the body of the All is a unit, and soul is everywhere present to it as to one thing.

When some animal rots and a multitude of others spring from it, the Life-Principle now present is not the particular soul that was in the larger body; that body has ceased to be receptive of soul, or there would have been no death; what happens is that whatsoever in the product of the decay is apt material for animal existence of one kind or another becomes ensouled by the fact that soul is nowhere lacking, though a recipient of soul may be. This new ensouling does not mean, however, an increase in the number of souls: all depend from the one or, rather, all remains one: it is as with ourselves; some elements are shed, others grow in their place; the soul abandons the discarded and flows into the newcoming as long as the one soul of the man holds its ground; in the All the one soul holds its ground for ever; its distinct contents now retain soul and now reject it, but the total of spiritual beings is unaffected.

9. But we must examine how soul comes to inhabit the body- the manner and the process- a question certainly of no minor interest.

The entry of soul into body takes place under two forms.

Firstly, there is the entry- metempsychosis- of a soul present in body by change from one [wholly material] frame to another or the entry- not known as metempsychosis, since the nature of the earlier habitacle is not certainly definable- of a soul leaving an aerial or fiery body for one of earth.

Secondly, there is the entry from the wholly bodiless into any kind of body; this is the earliest form of any dealing between body and soul, and this entry especially demands investigation.

What then can be thought to have happened when soul, utterly clean from body, first comes into commerce with the bodily nature?

It is reasonable, necessary even, to begin with the Soul of the All. Notice that if we are to explain and to be clear, we are obliged to use such words as "entry" and "ensoulment," though never was this All unensouled, never did body subsist with soul away, never was there Matter unelaborate; we separate, the better to understand; there is nothing illegitimate in the verbal and mental sundering of things which must in fact be co-existent.

The true doctrine may be stated as follows:

In the absence of body, soul could not have gone forth, since there is no other place to which its nature would allow it to descend. Since go forth it must, it will generate a place for itself; at once body, also, exists.

While the Soul [as an eternal, a Divine Being] is at rest- in rest firmly based on Repose, the Absolute- yet, as we may put it, that huge illumination of the Supreme pouring outwards comes at last to the extreme bourne of its light and dwindles to darkness; this darkness, now lying there beneath, the soul sees and by seeing brings to shape; for in the law of things this ultimate depth, neighbouring with soul, may not go void of whatsoever degree of that Reason-Principle it can absorb, the dimmed reason of reality at its faintest.

Imagine that a stately and varied mansion has been built; it has never been abandoned by its Architect, who, yet, is not tied down to it; he has judged it worthy in all its length and breadth of all the care that can serve to its Being- as far as it can share in Being- or to its beauty, but a care without burden to its director, who never descends, but presides over it from above: this gives the degree in which the kosmos is ensouled, not by a soul belonging to it, but by one present to it; it is mastered not master; not possessor but possessed. The soul bears it up, and it lies within, no fragment of it unsharing.

The kosmos is like a net which takes all its life, as far as ever it stretches, from being wet in the water, and has no act of its own; the sea rolls away and the net with it, precisely to the full of its scope, for no mesh of it can strain beyond its set place: the soul is of so far-reaching a nature- a thing unbounded- as to embrace the entire body of the All in the one extension; so far as the universe extends, there soul is; and if the universe had no existence, the extent of soul would be the same; it is eternally what it is. The universe spreads as broad as the presence of soul; the bound of its expansion is the point at which, in its downward egression from the Supreme, it still has soul to bind it in one: it is a shadow as broad as the Reason-Principle proceeding from soul; and that Reason-Principle is of scope to generate a kosmic bulk as vast as lay in the purposes of the Idea [the Divine forming power] which it conveys.

10. In view of all this we must now work back from the items to the unit, and consider the entire scheme as one enduring thing.

We ascend from air, light, sun- or, moon and light and sun- in detail, to these things as constituting a total- though a total of degrees, primary, secondary, tertiary. Thence we come to the [kosmic] Soul, always the one undiscriminated entity. At this point in our survey we have before us the over-world and all that follows upon it. That suite [the lower and material world] we take to be the very last effect that has penetrated to its furthest reach.

Our knowledge of the first is gained from the ultimate of all, from the very shadow cast by the fire, because this ultimate [the material world] itself receives its share of the general light, something of the nature of the Forming-Idea hovering over the outcast that at first lay in blank obscurity. It is brought under the scheme of reason by the efficacy of soul whose entire extension latently holds this rationalizing power. As we know, the Reason-Principles carried in animal seed fashion and shape living beings into so many universes in the small. For whatsoever touches soul is moulded to the nature of soul's own Real-Being.

We are not to think that the Soul acts upon the object by conformity to any external judgement; there is no pause for willing or planning: any such procedure would not be an act of sheer nature, but one of applied art: but art is of later origin than soul; it is an imitator, producing dim and feeble copies- toys, things of no great worth- and it is dependent upon all sorts of mechanism by which alone its images can be produced. The soul, on the contrary, is sovereign over material things by might of Real-Being; their quality is determined by its lead, and those elementary things cannot stand against its will. On the later level, things are hindered one by the other, and thus often fall short of the characteristic shape at which their unextended Reason-Principle must be aiming; in that other world [under the soul but above the material] the entire shape [as well as the idea] comes from soul, and all that is produced takes and keeps its appointed place in a unity, so that the engendered thing, without labour as without clash, becomes all that it should be. In that world the soul has elaborated its creation, the images of the gods, dwellings for men, each existing to some peculiar purpose.

Soul could produce none but the things which truly represent its powers: fire produces warmth; another source produces cold; soul has a double efficacy, its act within itself, and its act from within outwards towards the new production.

In soulless entities, the outgo [natural to everything] remains dormant, and any efficiency they have is to bring to their own likeness whatever is amenable to their act. All existence has this tendency to bring other things to likeness; but the soul has the distinction of possessing at once an action of conscious attention within itself, and an action towards the outer. It has thus the function of giving life to all that does not live by prior right, and the life it gives is commensurate with its own; that is to say, living in reason, it communicates reason to the body- an image of the reason within itself, just as the life given to the body is an image of Real-Being- and it bestows, also, upon that material the appropriate shapes of which it contains the Reason-Forms.

The content of the creative soul includes the Ideal shapes of gods and of all else: and hence it is that the kosmos contains all.

11. I think, therefore, that those ancient sages, who sought to secure the presence of divine beings by the erection of shrines and statues, showed insight into the nature of the All; they perceived that, though this Soul is everywhere tractable, its presence will be secured all the more readily when an appropriate receptacle is elaborated, a place especially capable of receiving some portion or phase of it, something reproducing it, or representing it, and serving like a mirror to catch an image of it.

It belongs to the nature of the All to make its entire content reproduce, most felicitously, the Reason-Principles in which it participates; every particular thing is the image within matter of a Reason-Principle which itself images a pre-material Reason-Principle: thus every particular entity is linked to that Divine Being in whose likeness it is made, the divine principle which the soul contemplated and contained in the act of each creation. Such mediation and representation there must have been since it was equally impossible for the created to be without share in the Supreme, and for the Supreme to

descend into the created.

The Intellectual-Principle in the Supreme has ever been the sun of that sphere- let us accept that as the type of the creative Logos- and immediately upon it follows the Soul depending from it, stationary Soul from stationary Intelligence. But the Soul borders also upon the sun of this sphere, and it becomes the medium by which all is linked to the overworld; it plays the part of an interpreter between what emanates from that sphere down to this lower universe, and what rises- as far as, through soul, anything can- from the lower to the highest.

Nothing, in fact, is far away from anything; things are not remote: there is, no doubt, the aloofness of difference and of mingled natures as against the unmingled; but selfhood has nothing to do with spatial position, and in unity itself there may still be distinction.

These Beings [the Reason-Principles of this sphere] are divine in virtue of cleaving to the Supreme, because, by the medium of the Soul thought of as descending they remain linked with the Primal Soul, and through it are veritably what they are called and possess the vision of the Intellectual Principle, the single object of contemplation to that soul in which they have their being.

12. The souls of men, seeing their images in the mirror of Dionysus as it were, have entered into that realm in a leap downward from the Supreme: yet even they are not cut off from their origin, from the divine Intellect; it is not that they have come bringing the Intellectual Principle down in their fall; it is that though they have descended even to earth, yet their higher part holds for ever above the heavens.

Their initial descent is deepened since that mid-part of theirs is compelled to labour in care of the care-needing thing into which they have entered. But Zeus, the father, takes pity on their toils and makes the bonds in which they labour soluble by death and gives respite in due time, freeing them from the body, that they too may come to dwell there where the Universal Soul, unconcerned with earthly needs, has ever dwelt.

For the container of the total of things must be a self-sufficing entity and remain so: in its periods it is wrought out to purpose under its Reason-Principles which are perdurably valid; by these periods it reverts unfailingly, in the measured stages of defined life-duration, to its established character; it is leading the things of this realm to be of one voice and plan with the Supreme. And thus the kosmic content is carried forward to its purpose, everything in its co-ordinate place, under one only Reason-Principle operating alike in the descent and return of souls and to every purpose of the system.

We may know this also by the concordance of the Souls with the ordered scheme of the kosmos; they are not independent, but, by their descent, they have put themselves in contact, and they stand henceforth in harmonious association with kosmic circuit- to the extent that their fortunes, their life experiences, their choosing and refusing, are announced by the patterns of the stars- and out of this concordance rises as it were one musical utterance: the music, the harmony, by which all is described is the best witness to this truth.

Such a consonance can have been procured in one only way:

The All must, in every detail of act and experience, be an expression of the Supreme, which must dominate alike its periods and its stable ordering and the life-careers varying with the movement of the souls as they are sometimes absorbed in that highest, sometimes in the heavens, sometimes turned to the things and places of our earth. All that is Divine Intellect will rest eternally above, and could never fall from its sphere but, poised entire in its own high place, will communicate to things here through the channel of Soul. Soul in virtue of neighbourhood is more closely modelled upon the Idea uttered by the Divine Intellect, and thus is able to produce order in the movement of the lower realm, one phase [the World-Soul] maintaining the unvarying march [of the kosmic circuit] the other [the soul of the Individual] adopting itself to times and season.

The depth of the descent, also, will differ- sometimes lower, sometimes less low- and this even in its entry into any given Kind: all that is fixed is that each several soul descends to a recipient indicated by affinity of condition; it moves towards the thing which it There resembled, and enters, accordingly, into the body of man or animal.

13. The Ineluctable, the Kosmic Law is, thus, rooted in a natural principle under which each several entity is overruled to go, duly and in order, towards that place and Kind to which it characteristically tends, that is towards the image of its primal choice and constitution.

In that archetypal world every form of soul is near to the image [the thing in the world of copy] to which its individual constitution inclines it; there is therefore no need of a sender or leader acting at the right moment to bring it at the right moment whether into body or into a definitely appropriate body: of its own motion it descends at the precisely true time and enters where it must. To every Soul its own hour; when that strikes it descends and enters the body suitable to it as at the cry of a herald; thus all is set stirring and advancing as by a magician's power or by some mighty traction; it is much as, in any living thing, the soul itself effects the fulfillment of the natural career, stirring and bringing forth, in due season, every element- beard, horn, and all the successive stages of tendency and of output- or, as it leads a tree through its normal course within set periods.

The Souls go forth neither under compulsion nor of freewill; or, at least, freedom, here, is not to be regarded as action upon preference; it is more like such a leap of the nature as moves men to the instinctive desire of sexual union, or, in the case of some, to fine conduct; the motive lies elsewhere than in the reason: like is destined unfailingly to like, and each moves hither or thither at its fixed moment.

Even the Intellectual-Principle, which is before all the kosmos, has, it also, its destiny, that of abiding intact above, and of giving downwards: what it sends down is the particular whose existence is implied in the law of the universal; for the universal broods closely over the particular; it is not from without that the law derives the power by which it is executed; on the contrary the law is given in the entities upon whom it falls; these

bear it about with them. Let but the moment arrive, and what it decrees will be brought to act by those beings in whom it resides; they fulfil it because they contain it; it prevails because it is within them; it becomes like a heavy burden, and sets up in them a painful longing to enter the realm to which they are bidden from within.

14. Thus it comes about that this kosmos, lit with many lights, gleaming in its souls, receives still further graces, gifts from here and from there, from the gods of the Supreme, and from those other Intellectual-Principles whose nature it is to ensoul. This is probably the secret of the myth in which, after Prometheus had moulded woman, the other gods heaped gifts upon her, Hephaistos "blending the clay with moisture and bestowing the human voice and the form of a goddess"; Aphrodite bringing her gifts, and the Graces theirs, and other gods other gifts, and finally calling her by the name [Pandora] which tells of gift and of all giving- for all have added something to this formation brought to being by a Promethean, a fore-thinking power. As for the rejection of Prometheus' gift by after-thought, Epimetheus, what can this signify but that the wiser choice is to remain in the Intellectual realm? Pandora's creator is fettered, to signify that he is in some sense held by his own creation; such a fettering is external and the release by Hercules tells that there is power in Prometheus, so that he need not remain in bonds.

Take the myth as we may, it is certainly such an account of the bestowal of gifts upon the kosmos as harmonizes with our explanation of the universal system.

15. The souls peering forth from the Intellectual Realm descend first to the heavens and there put on a body; this becomes at once the medium by which as they reach out more and more towards magnitude [physical extension] they proceed to bodies progressively more earthy. Some even plunge from heaven to the very lowest of corporeal forms; others pass, stage by stage, too feeble to lift towards the higher the burden they carry, weighed downwards by their heaviness and forgetfulness.

As for the differences among them, these are due to variation in the bodies entered, or to the accidents of life, or to upbringing, or to inherent peculiarities of temperament, or to all these influences together, or to specific combinations of them.

Then again some have fallen unreservedly into the power of the destiny ruling here: some yielding betimes are betimes too their own: there are those who, while they accept what must be borne, have the strength of self-mastery in all that is left to their own act; they have given themselves to another dispensation: they live by the code of the aggregate of beings, the code which is woven out of the Reason-Principles and all the other causes ruling in the kosmos, out of soul-movements and out of laws springing in the Supreme; a code, therefore, consonant with those higher existences, founded upon them, linking their sequents back to them, keeping unshakeably true all that is capable of holding itself set towards the divine nature, and leading round by all appropriate means whatsoever is less natively apt.

In fine all diversity of condition in the lower spheres is determined by the descendent beings themselves.

16. The punishment justly overtaking the wicked must therefore be ascribed to the kosmic order which leads all in accordance with the right.

But what of chastisements, poverty, illness, falling upon the good outside of all justice? These events, we will be told, are equally interwoven into the world order and fall under prediction, and must consequently have a cause in the general reason: are they therefore to be charged to past misdoing?

No: such misfortunes do not answer to reasons established in the nature of things; they are not laid up in the master-facts of the universe, but were merely accidental sequents: a house falls, and anyone that chances to be underneath is killed, no matter what sort of man he be: two objects are moving in perfect order- or one if you like- but anything getting in the way is wounded or trampled down. Or we may reason that the undeserved stroke can be no evil to the sufferer in view of the beneficent interweaving of the All or again, no doubt, that nothing is unjust that finds justification in a past history.

We may not think of some things being fitted into a system with others abandoned to the capricious; if things must happen by cause, by natural sequences, under one Reason-Principle and a single set scheme, we must admit that the minor equally with the major is fitted into that order and pattern.

Wrong-doing from man to man is wrong in the doer and must be imputed, but, as belonging to the established order of the universe is not a wrong even as regards the innocent sufferer; it is a thing that had to be, and, if the sufferer is good, the issue is to his gain. For we cannot think that this ordered combination proceeds without God and justice; we must take it to be precise in the distribution of due, while, yet, the reasons of things elude us, and to our ignorance the scheme presents matter of censure.

17. Various considerations explain why the Souls going forth from the Intellectual proceed first to the heavenly regions. The heavens, as the noblest portion of sensible space, would border with the least exalted of the Intellectual, and will, therefore, be first ensouled first to participate as most apt; while what is of earth is at the very extremity of progression, least endowed towards participation, remotest from the unembodied.

All the souls, then, shine down upon the heavens and spend there the main of themselves and the best; only their lower phases illuminate the lower realms; and those souls which descend deepest show their light furthest down- not themselves the better for the depth to which they have penetrated.

There is, we may put it, something that is centre; about it, a circle of light shed from it; round centre and first circle alike, another circle, light from light; outside that again, not another circle of light but one which, lacking light of its own, must borrow.

The last we may figure to ourselves as a revolving circle, or rather a sphere, of a nature to receive light from that third realm, its next higher, in proportion to the light which that itself receives. Thus all begins with the great light, shining self-centred; in accordance

with the reigning plan [that of emanation] this gives forth its brilliance; the later [divine] existents [souls] add their radiation- some of them remaining above, while there are some that are drawn further downward, attracted by the splendour of the object they illuminate. These last find that their charges need more and more care: the steersman of a storm-tossed ship is so intent on saving it that he forgets his own interest and never thinks that he is recurrently in peril of being dragged down with the vessel; similarly the souls are intent upon contriving for their charges and finally come to be pulled down by them; they are fettered in bonds of sorcery, gripped and held by their concern for the realm of Nature.

If every living being were of the character of the All-perfect, self-sufficing, in peril from no outside influence the soul now spoken of as indwelling would not occupy the body; it would infuse life while clinging, entire, within the Supreme.

18. There remains still something to be said on the question whether the soul uses deliberate reason before its descent and again when it has left the body.

Reasoning is for this sphere; it is the act of the soul fallen into perplexity, distracted with cares, diminished in strength: the need of deliberation goes with the less self-sufficing intelligence; craftsmen faced by a difficulty stop to consider; where there is no problem their art works on by its own forthright power.

But if souls in the Supreme operate without reasoning, how can they be called reasoning souls?

One answer might be that they have the power of deliberating to happy issue, should occasion arise: but all is met by repudiating the particular kind of reasoning intended [the earthly and discursive type]; we may represent to ourselves a reasoning that flows uninterruptedly from the Intellectual-Principle in them, an inherent state, an enduring activity, an assertion that is real; in this way they would be users of reason even when in that overworld. We certainly cannot think of them, it seems to me, as employing words when, though they may occupy bodies in the heavenly region, they are essentially in the Intellectual: and very surely the deliberation of doubt and difficulty which they practise here must be unknown to them There; all their act must fall into place by sheer force of their nature; there can be no question of commanding or of taking counsel; they will know, each, what is to be communicated from another, by present consciousness. Even in our own case here, eyes often know what is not spoken; and There all is pure, every being is, as it were, an eye, nothing is concealed or sophisticated, there is no need of speech, everything is seen and known. As for the Celestials [the Daimones] and souls in the air, they may well use speech; for all such are simply Animate [= Beings].

19. Are we to think of the indivisible phase of the soul and the divided as making one thing in a coalescence; or is the indivisible in a place of its own and under conditions of its own, the divisible being a sequent upon it, a separate part of it, as distinct as the reasoning phase is from the unreasoning?

The answer to this question will emerge when we make plain the nature and function to

be attributed to each.

The indivisible phase is mentioned [in the passage of Plato] without further qualification; but not so the divisible; "that soul" we read "which becomes divisible in bodies" - and even this last is presented as becoming partible, not as being so once for all.

"In bodies": we must then, satisfy ourselves as to what form of soul is required to produce life in the corporeal, and what there must be of soul present throughout such a body, such a completed organism.

Now, every sensitive power- by the fact of being sensitive throughout- tends to become a thing of parts: present at every distinct point of sensitiveness, it may be thought of as divided. In the sense, however, that it is present as a whole at every such point, it cannot be said to be wholly divided; it "becomes divisible in body." We may be told that no such partition is implied in any sensations but those of touch; but this is not so; where the participant is body [of itself insensitive and non-transmitting] that divisibility in the sensitive agent will be a condition of all other sensations, though in less degree than in the case of touch. Similarly the vegetative function in the soul, with that of growth, indicates divisibility; and, admitting such locations as that of desire at the liver and emotional activity at the heart, we have the same result. It is to be noted, however, as regards these [the less corporeal] sensations, that the body may possibly not experience them as a fact of the conjoint thing but in another mode, as rising within some one of the elements of which it has been participant [as inherent, purely, in some phase of the associated soul]: reasoning and the act of the intellect, for instance, are not vested in the body; their task is not accomplished by means of the body which in fact is detrimental to any thinking on which it is allowed to intrude.

Thus the indivisible phase of the soul stands distinct from the divisible; they do not form a unity, but, on the contrary, a whole consisting of parts, each part a self-standing thing having its own peculiar virtue. None the less, if that phase which becomes divisible in body holds indivisibility by communication from the superior power, then this one same thing [the soul in body] may be at once indivisible and divisible; it will be, as it were, a blend, a thing made up of its own divisible self with, in addition, the quality that it derives from above itself.

20. Here a question rises to which we must find an answer: whether these and the other powers which we call "parts" of the Soul are situated, all, in place; or whether some have place and standpoint, others not; or whether again none are situated in place.

The matter is difficult: if we do not allot to each of the parts of the Soul some form of Place, but leave all unallocated- no more within the body than outside it- we leave the body soulless, and are at a loss to explain plausibly the origin of acts performed by means of the bodily organs: if, on the other hand, we suppose some of those phases to be [capable of situation] in place but others not so, we will be supposing that those parts to which we deny place are ineffective in us, or, in other words, that we do not possess our entire soul.

This simply shows that neither the soul entire nor any part of it may be considered to be within the body as in a space: space is a container, a container of body; it is the home of such things as consist of isolated parts, things, therefore, in which at no point is there an entirety; now, the soul is not a body and is no more contained than containing.

Neither is it in body as in some vessel: whether as vessel or as place of location, the body would remain, in itself, unensouled. If we are to think of some passing-over from the soul- that self-gathered thing- to the containing vessel, then soul is diminished by just as much as the vessel takes.

Space, again, in the strict sense is unembodied, and is not, itself, body; why, then, should it need soul?

Besides [if the soul were contained as in space] contact would be only at the surface of the body, not throughout the entire mass.

Many other considerations equally refute the notion that the soul is in body as [an object] in space; for example, this space would be shifted with every movement, and a thing itself would carry its own space about.

Of course if by space we understand the interval separating objects, it is still less possible that the soul be in body as in space: such a separating interval must be a void; but body is not a void; the void must be that in which body is placed; body [not soul] will be in the void.

Nor can it be in the body as in some substratum: anything in a substratum is a condition affecting that- a colour, a form- but the soul is a separate existence.

Nor is it present as a part in the whole; soul is no part of body. If we are asked to think of soul as a part in the living total we are faced with the old difficulty: How it is in that whole. It is certainly not there as the wine is in the wine jar, or as the jar in the jar, or as some absolute is self-present.

Nor can the presence be that of a whole in its part: It would be absurd to think of the soul as a total of which the body should represent the parts.

It is not present as Form is in Matter; for the Form as in Matter is inseparable and, further, is something superimposed upon an already existent thing; soul, on the contrary, is that which engenders the Form residing within the Matter and therefore is not the Form. If the reference is not to the Form actually present, but to Form as a thing existing apart from all formed objects, it is hard to see how such an entity has found its way into body, and at any rate this makes the soul separable.

How comes it then that everyone speaks of soul as being in body?

Because the soul is not seen and the body is: we perceive the body, and by its movement and sensation we understand that it is ensouled, and we say that it

possesses a soul; to speak of residence is a natural sequence. If the soul were visible, an object of the senses, radiating throughout the entire life, if it were manifest in full force to the very outermost surface, we would no longer speak of soul as in body; we would say the minor was within the major, the contained within the container, the fleeting within the perdurable.

21. What does all this come to? What answer do we give to him who, with no opinion of his own to assert, asks us to explain this presence? And what do we say to the question whether there is one only mode of presence of the entire soul or different modes, phase and phase?

Of the modes currently accepted for the presence of one thing in another, none really meets the case of the soul's relation to the body. Thus we are given as a parallel the steersman in the ship; this serves adequately to indicate that the soul is potentially separable, but the mode of presence, which is what we are seeking, it does not exhibit.

We can imagine it within the body in some incidental way- for example, as a voyager in a ship- but scarcely as the steersman: and, of course, too, the steersman is not omnipresent to the ship as the soul is to the body.

May we, perhaps, compare it to the science or skill that acts through its appropriate instruments- through a helm, let us say, which should happen to be a live thing- so that the soul effecting the movements dictated by seamanship is an indwelling directive force?

No: the comparison breaks down, since the science is something outside of helm and ship.

Is it any help to adopt the illustration of the steersman taking the helm, and to station the soul within the body as the steersman may be thought to be within the material instrument through which he works? Soul, whenever and wherever it chooses to operate, does in much that way move the body.

No; even in this parallel we have no explanation of the mode of presence within the instrument; we cannot be satisfied without further search, a closer approach.

22. May we think that the mode of the soul's presence to body is that of the presence of light to the air?

This certainly is presence with distinction: the light penetrates through and through, but nowhere coalesces; the light is the stable thing, the air flows in and out; when the air passes beyond the lit area it is dark; under the light it is lit: we have a true parallel to what we have been saying of body and soul, for the air is in the light quite as much as the light in the air.

Plato therefore is wise when, in treating of the All, he puts the body in its soul, and not its soul in the body, and says that, while there is a region of that soul which contains

body, there is another region to which body does not enter- certain powers, that is, with which body has no concern. And what is true of the All-Soul is true of the others.

There are, therefore, certain soul-powers whose presence to body must be denied.

The phases present are those which the nature of body demands: they are present without being resident- either in any parts of the body or in the body as a whole.

For the purposes of sensation the sensitive phase of the soul is present to the entire sensitive being: for the purposes of act, differentiation begins; every soul phase operates at a point peculiar to itself.

23. I explain: A living body is illuminated by soul: each organ and member participates in soul after some manner peculiar to itself; the organ is adapted to a certain function, and this fitness is the vehicle of the soul-faculty under which the function is performed; thus the seeing faculty acts through the eyes, the hearing faculty through the ears, the tasting faculty through the tongue, the faculty of smelling through the nostrils, and the faculty of sentient touch is present throughout, since in this particular form of perception the entire body is an instrument in the soul's service.

The vehicles of touch are mainly centred in the nerves- which moreover are vehicles of the faculty by which the movements of the living being are affected- in them the soul-faculty concerned makes itself present; the nerves start from the brain. The brain therefore has been considered as the centre and seat of the principle which determines feeling and impulse and the entire act of the organism as a living thing; where the instruments are found to be linked, there the operating faculty is assumed to be situated. But it would be wiser to say only that there is situated the first activity of the operating faculty: the power to be exercised by the operator- in keeping with the particular instrument- must be considered as concentrated at the point at which the instrument is to be first applied; or, since the soul's faculty is of universal scope the sounder statement is that the point of origin of the instrument is the point of origin of the act.

Now, the faculty presiding over sensation and impulse is vested in the sensitive and representative soul; it draws upon the Reason-Principle immediately above itself; downward, it is in contact with an inferior of its own: on this analogy the uppermost member of the living being was taken by the ancients to be obviously its seat; they lodged it in the brain, or not exactly in the brain but in that sensitive part which is the medium through which the Reason-Principle impinges upon the brain. They saw that something must be definitely allocated to body- at the point most receptive of the act of reason- while something, utterly isolated from body must be in contact with that superior thing which is a form of soul [and not merely of the vegetative or other quasi-corporeal forms but] of that soul apt to the appropriation of the perceptions originating in the Reason-Principle.

Such a linking there must be, since in perception there is some element of judging, in representation something intuitional, and since impulse and appetite derive from

representation and reason. The reasoning faculty, therefore, is present where these experiences occur, present not as in a place but in the fact that what is there draws upon it. As regards perception we have already explained in what sense it is local.

But every living being includes the vegetal principle, that principle of growth and nourishment which maintains the organism by means of the blood; this nourishing medium is contained in the veins; the veins and blood have their origin in the liver: from observation of these facts the power concerned was assigned a place; the phase of the soul which has to do with desire was allocated to the liver. Certainly what brings to birth and nourishes and gives growth must have the desire of these functions. Blood- subtle, light, swift, pure- is the vehicle most apt to animal spirit: the heart, then, its well-spring, the place where such blood is sifted into being, is taken as the fixed centre of the ebullition of the passionate nature.

24. Now comes the question of the soul leaving the body; where does it go?

It cannot remain in this world where there is no natural recipient for it; and it cannot remain attached to anything not of a character to hold it: it can be held here when only it is less than wise, containing within itself something of that which lures it.

If it does contain any such alien element it gives itself, with increasing attachment, to the sphere to which that element naturally belongs and tends.

The space open to the soul's resort is vast and diverse; the difference will come by the double force of the individual condition and of the justice reigning in things. No one can ever escape the suffering entailed by ill deeds done: the divine law is ineluctable, carrying bound up, as one with it, the fore-ordained execution of its doom. The sufferer, all unaware, is swept onward towards his due, hurried always by the restless driving of his errors, until at last wearied out by that against which he struggled, he falls into his fit place and, by self-chosen movement, is brought to the lot he never chose. And the law decrees, also, the intensity and the duration of the suffering while it carries with it, too, the lifting of chastisement and the faculty of rising from those places of pain- all by power of the harmony that maintains the universal scheme.

Souls, body-bound, are apt to body-punishment; clean souls no longer drawing to themselves at any point any vestige of body are, by their very being, outside the bodily sphere; body-free, containing nothing of body- there where Essence is, and Being, and the Divine within the Divinity, among Those, within That, such a soul must be.

If you still ask Where, you must ask where those Beings are- and in your seeking, seek otherwise than with the sight, and not as one seeking for body.

25. Now comes the question, equally calling for an answer, whether those souls that have quitted the places of earth retain memory of their lives- all souls or some, of all things, or of some things, and, again, for ever or merely for some period not very long after their withdrawal.

A true investigation of this matter requires us to establish first what a remembering principle must be- I do not mean what memory is, but in what order of beings it can occur. The nature of memory has been indicated, laboured even, elsewhere; we still must try to understand more clearly what characteristics are present where memory exists.

Now a memory has to do with something brought into ken from without, something learned or something experienced; the Memory-Principle, therefore, cannot belong to such beings as are immune from experience and from time.

No memory, therefore, can be ascribed to any divine being, or to the Authentic-Existent or the Intellectual-Principle: these are intangibly immune; time does not approach them; they possess eternity centred around Being; they know nothing of past and sequent; all is an unbroken state of identity, not receptive of change. Now a being rooted in unchanging identity cannot entertain memory, since it has not and never had a state differing from any previous state, or any new intellection following upon a former one, so as to be aware of contrast between a present perception and one remembered from before.

But what prevents such a being [from possessing memory in the sense of] perceiving, without variation in itself, such outside changes as, for example, the kosmic periods?

Simply the fact that following the changes of the revolving kosmos it would have perception of earlier and later: intuition and memory are distinct.

We cannot hold its self-intellections to be acts of memory; this is no question of something entering from without, to be grasped and held in fear of an escape; if its intellections could slip away from it [as a memory might] its very Essence [as the Hypostasis of inherent Intellection] would be in peril.

For the same reason memory, in the current sense, cannot be attributed to the soul in connection with the ideas inherent in its essence: these it holds not as a memory but as a possession, though, by its very entrance into this sphere, they are no longer the mainstay of its Act.

The Soul-action which is to be observed seems to have induced the Ancients to ascribe memory, and "Recollection," [the Platonic Anamnesis] to souls bringing into outward manifestation the ideas they contain: we see at once that the memory here indicated is another kind; it is a memory outside of time.

But, perhaps, this is treating too summarily a matter which demands minute investigation. It might be doubted whether that recollection, that memory, really belongs to the highest soul and not rather to another, a dimmer, or even to the Couplement, the Living-Being. And if to that dimmer soul, when and how has it come to be present; if to the Couplement, again when and how?

We are driven thus to enquire into these several points: in which of the constituents of

our nature is memory vested- the question with which we started- if in the soul, then in what power or part; if in the Animate or Couplement- which has been supposed, similarly to be the seat of sensation- then by what mode it is present, and how we are to define the Couplement; finally whether sensation and intellectual acts may be ascribed to one and the same agent, or imply two distinct principles.

26. Now if sensations of the active order depend upon the Couplement of soul and body, sensation must be of that double nature. Hence it is classed as one of the shared acts: the soul, in the feeling, may be compared to the workman in such operations as boring or weaving, the body to the tool employed: the body is passive and menial; the soul is active, reading such impressions as are made upon the body or discerned by means of the body, perhaps entertaining only a judgement formed as the result of the bodily experiences.

In such a process it is at once clear that the sensation is a shared task; but the memory is not thus made over to the Couplement, since the soul has from the first taken over the impression, either to retain or to reject.

It might be ventured that memory, no less than sensation, is a function of the Couplement, on the ground that bodily constitution determines our memories good or bad; but the answer would come that, whether the body happens or not to be a hindrance, the act of remembering would still be an act of the soul. And in the case of matters learned [and not merely felt, as corporeal experiences], how can we think of the Couplement of soul and body as the remembering principle? Here, surely, it must be soul alone?

We may be told that the living-being is a Couplement in the sense of something entirely distinct formed from the two elements [so that it might have memory though neither soul nor body had it]. But, to begin with, it is absurd to class the living-being as neither body nor soul; these two things cannot so change as to make a distinct third, nor can they blend so utterly that the soul shall become a mere faculty of the animate whole. And, further, supposing they could so blend, memory would still be due to the soul just as in honey-wine all the sweetness will be due to the honey.

It may be suggested the while the soul is perhaps not in itself a remembering principle, yet that, having lost its purity and acquired some degree of modification by its presence in body, it becomes capable of reproducing the imprints of sensible objects and experiences, and that, seated, as roughly speaking it is, within the body, it may reasonably be thought capable of accepting such impressions, and in such a manner as to retain them [thus in some sense possessing memory].

But, to begin with, these imprints are not magnitudes [are not of corporeal nature at all]; there is no resemblance to seal impressions, no stamping of a resistant matter, for there is neither the down-thrust [as of the seal] nor [the acceptance] as in the wax: the process is entirely of the intellect, though exercised upon things of sense; and what kind of resistance [or other physical action] can be affirmed in matters of the intellectual order, or what need can there be of body or bodily quality as a means?

Further there is one order of which the memory must obviously belong to the soul; it alone can remember its own movements, for example its desires and those frustrations of desire in which the coveted thing never came to the body: the body can have nothing to tell about things which never approached it, and the soul cannot use the body as a means to the remembrance of what the body by its nature cannot know.

If the soul is to have any significance- to be a definite principle with a function of its own- we are forced to recognize two orders of fact, an order in which the body is a means but all culminates in soul, and an order which is of the soul alone. This being admitted, aspiration will belong to soul, and so, as a consequence, will that memory of the aspiration and of its attainment or frustration, without which the soul's nature would fall into the category of the unstable [that is to say of the undivine, unreal]. Deny this character of the soul and at once we refuse it perception, consciousness, any power of comparison, almost any understanding. Yet these powers of which, embodied it becomes the source cannot be absent from its own nature. On the contrary; it possesses certain activities to be expressed in various functions whose accomplishment demands bodily organs; at its entry it brings with it [as vested in itself alone] the powers necessary for some of these functions, while in the case of others it brings the very activities themselves.

Memory, in point of fact, is impeded by the body: even as things are, addition often brings forgetfulness; with thinning and dearing away, memory will often revive. The soul is a stability; the shifting and fleeting thing which body is can be a cause only of its forgetting not of its remembering- Lethe stream may be understood in this sense- and memory is a fact of the soul.

27. But of what soul; of that which we envisage as the more divine, by which we are human beings, or that other which springs from the All?

Memory must be admitted in both of these, personal memories and shared memories; and when the two souls are together, the memories also are as one; when they stand apart, assuming that both exist and endure, each soon for gets the other's affairs, retaining for a longer time its own. Thus it is that the Shade of Hercules in the lower regions- this "Shade," as I take it, being the characteristically human part- remembers all the action and experience of the life, since that career was mainly of the hero's personal shaping; the other souls [soulphases] going to constitute the joint-being could, for all their different standing, have nothing to recount but the events of that same life, doings which they knew from the time of their association: perhaps they would add also some moral judgement.

What the Hercules standing outside the Shade spoke of we are not told: what can we think that other, the freed and isolated, soul would recount?

The soul, still a dragged captive, will tell of all the man did and felt; but upon death there will appear, as time passes, memories of the lives lived before, some of the events of the most recent life being dismissed as trivial. As it grows away from the body, it will

revive things forgotten in the corporeal state, and if it passes in and out of one body after another, it will tell over the events of the discarded life, it will treat as present that which it has just left, and it will remember much from the former existence. But with lapse of time it will come to forgetfulness of many things that were mere accretion.

Then free and alone at last, what will it have to remember?

The answer to that question depends on our discovering in what faculty of the soul memory resides.

28. Is memory vested in the faculty by which we perceive and learn? Or does it reside in the faculty by which we set things before our minds as objects of desire or of anger, the passionate faculty?

This will be maintained on the ground that there could scarcely be both a first faculty in direct action and a second to remember what that first experiences. It is certain that the desiring faculty is apt to be stirred by what it has once enjoyed; the object presents itself again; evidently, memory is at work; why else, the same object with the same attraction?

But, at that, we might reasonably ascribe to the desiring faculty the very perception of the desired objects and then the desire itself to the perceptive faculty, and so on all through, and in the end conclude that the distinctive names merely indicate the function which happens to be uppermost.

Yet the perception is very different from faculty to faculty; certainly it is sight and not desire that sees the object; desire is stirred merely as a result of the seeing, by a transmission; its act is not in the nature of an identification of an object seen; all is simply blind response [automatic reaction]. Similarly with rage; sight reveals the offender and the passion leaps; we may think of a shepherd seeing a wolf at his flock, and a dog, seeing nothing, who springs to the scent or the sound.

In other words the desiring faculty has had the emotion, but the trace it keeps of the event is not a memory; it is a condition, something passively accepted: there is another faculty that was aware of the enjoyment and retains the memory of what has happened. This is confirmed by the fact that many satisfactions which the desiring faculty has enjoyed are not retained in the memory: if memory resided in the desiring faculty, such forgetfulness could not be.

29. Are we, then, to refer memory to the perceptive faculty and so make one principle of our nature the seat of both awareness and remembrance?

Now supposing the very Shade, as we were saying in the case of Hercules, has memory, then the perceptive faculty is twofold.

[(And if (on the same supposition) the faculty that remembers is not the faculty that perceives, but some other thing, then the remembering faculty is twofold.)]

And further if the perceptive faculty [= the memory] deals with matters learned [as well as with matters of observation and feeling] it will be the faculty for the processes of reason also: but these two orders certainly require two separate faculties.

Must we then suppose a common faculty of apprehension [one covering both sense perceptions and ideas] and assign memory in both orders to this?

The solution might serve if there were one and the same percipient for objects of sense and objects of the Intellectual-Kind; but if these stand in definite duality, then, for all we can say or do, we are left with two separate principles of memory; and, supposing each of the two orders of soul to possess both principles, then we have four.

And, on general grounds, what compelling reason is there that the principle by which we perceive should be the principle by which we remember, that these two acts should be vested in the one faculty? Why must the seat of our intellectual action be also the seat of our remembrance of that action? The most powerful thought does not always go with the readiest memory; people of equal perception are not equally good at remembering; some are especially gifted in perception, others, never swift to grasp, are strong to retain.

But, once more, admitting two distinct principles, something quite separate remembering what sense-perception has first known- still this something must have felt what it is required to remember?

No; we may well conceive that where there is to be memory of a sense-perception, this perception becomes a mere presentment, and that to this image-grasping power, a distinct thing, belongs the memory, the retention of the object: for in this imaging faculty the perception culminates; the impression passes away but the vision remains present to the imagination.

By the fact of harbouring the presentment of an object that has disappeared, the imagination is, at once, a seat of memory: where the persistence of the image is brief, the memory is poor; people of powerful memory are those in whom the image-holding power is firmer, not easily allowing the record to be jostled out of its grip.

Remembrance, thus, is vested in the imaging faculty; and memory deals with images. Its differing quality or degree from man to man, we would explain by difference or similarity in the strength of the individual powers, by conduct like or unlike, by bodily conditions present or absent, producing change and disorder or not- a point this, however, which need not detain us here.

30. But what of the memory of mental acts: do these also fall under the imaging faculty?

If every mental act is accompanied by an image we may well believe that this image, fixed and like a picture of the thought, would explain how we remember the object of knowledge once entertained. But if there is no such necessary image, another solution

must be sought. Perhaps memory would be the reception, into the image-taking faculty, of the Reason-Principle which accompanies the mental conception: this mental conception- an indivisible thing, and one that never rises to the exterior of the consciousness- lies unknown below; the Reason-Principle the revealer, the bridge between the concept and the image-taking faculty exhibits the concept as in a mirror; the apprehension by the image-taking faculty would thus constitute the enduring presence of the concept, would be our memory of it.

This explains, also, another fact: the soul is unfailingly intent upon intellection; only when it acts upon this image-taking faculty does its intellection become a human perception: intellection is one thing, the perception of an intellection is another: we are continuously intuitive but we are not unbrokenly aware: the reason is that the recipient in us receives from both sides, absorbing not merely intellections but also sense-perceptions.

31. But if each of the two phases of the soul, as we have said, possesses memory, and memory is vested in the imaging faculty, there must be two such faculties. Now that is all very well as long as the two souls stand apart; but, when they are at one in us, what becomes of the two faculties, and in which of them is the imaging faculty vested?

If each soul has its own imaging faculty the images must in all cases be duplicated, since we cannot think that one faculty deals only with intellectual objects, and the other with objects of sense, a distinction which inevitably implies the co-existence in man of two life-principles utterly unrelated.

And if both orders of image act upon both orders of soul, what difference is there in the souls; and how does the fact escape our knowledge?

The answer is that, when the two souls chime each with each, the two imaging faculties no longer stand apart; the union is dominated by the more powerful of the faculties of the soul, and thus the image perceived is as one: the less powerful is like a shadow attending upon the dominant, like a minor light merging into a greater: when they are in conflict, in discord, the minor is distinctly apart, a self-standing thing- though its isolation is not perceived, for the simple reason that the separate being of the two souls escapes observation.

The two have run into a unity in which, yet, one is the loftier: this loftier knows all; when it breaks from the union, it retains some of the experiences of its companion, but dismisses others; thus we accept the talk of our less valued associates, but, on a change of company, we remember little from the first set and more from those in whom we recognize a higher quality.

32. But the memory of friends, children, wife? Country too, and all that the better sort of man may reasonably remember?

All these, the one [the lower man] retains with emotion, the authentic man passively: for the experience, certainly, was first felt in that lower phase from which, however, the best

of such impressions pass over to the graver soul in the degree in which the two are in communication.

The lower soul must be always striving to attain to memory of the activities of the higher: this will be especially so when it is itself of a fine quality, for there will always be some that are better from the beginning and bettered here by the guidance of the higher.

The loftier, on the contrary, must desire to come to a happy forgetfulness of all that has reached it through the lower: for one reason, there is always the possibility that the very excellence of the lower prove detrimental to the higher, tending to keep it down by sheer force of vitality. In any case the more urgent the intention towards the Supreme, the more extensive will be the soul's forgetfulness, unless indeed, when the entire living has, even here, been such that memory has nothing but the noblest to deal with: in this world itself, all is best when human interests have been held aloof; so, therefore, it must be with the memory of them. In this sense we may truly say that the good soul is the forgetful. It flees multiplicity; it seeks to escape the unbounded by drawing all to unity, for only thus is it free from entanglement, light-footed, self-conducted. Thus it is that even in this world the soul which has the desire of the other is putting away, amid its actual life, all that is foreign to that order. It brings there very little of what it has gathered here; as long as it is in the heavenly regions only, it will have more than it can retain.

The Hercules of the heavenly regions would still tell of his feats: but there is the other man to whom all of that is trivial; he has been translated to a holier place; he has won his way to the Intellectual Realm; he is more than Hercules, proven in the combats in which the combatants are the wise.

FOURTH TRACTATE.

PROBLEMS OF THE SOUL (2).

1. What, then, will be the Soul's discourse, what its memories in the Intellectual Realm, when at last it has won its way to that Essence?

Obviously from what we have been saying, it will be in contemplation of that order, and have its Act upon the things among which it now is; failing such Contemplation and Act, its being is not there. Of things of earth it will know nothing; it will not, for example, remember an act of philosophic virtue, or even that in its earthly career it had contemplation of the Supreme.

When we seize anything in the direct intellectual act there is room for nothing else than to know and to contemplate the object; and in the knowing there is not included any previous knowledge; all such assertion of stage and progress belongs to the lower and is a sign of the altered; this means that, once purely in the Intellectual, no one of us can have any memory of our experience here. Further; if all intellection is timeless- as appears from the fact that the Intellectual beings are of eternity not of time- there can be no memory in the intellectual world, not merely none of earthly things but none

whatever: all is presence There; for nothing passes away, there is no change from old to new.

This, however, does not alter the fact that distinction exists in that realm- downwards from the Supreme to the Ideas, upward from the Ideas to the Universal and to the Supreme. Admitting that the Highest, as a self-contained unity, has no outgoing effect, that does not prevent the soul which has attained to the Supreme from exerting its own characteristic Act: it certainly may have the intuition, not by stages and parts, of that Being which is without stage and part.

But that would be in the nature of grasping a pure unity?

No: in the nature of grasping all the intellectual facts of a many that constitutes a unity. For since the object of vision has variety [distinction within its essential oneness] the intuition must be multiple and the intuitions various, just as in a face we see at the one glance eyes and nose and all the rest.

But is not this impossible when the object to be thus divided and treated as a thing of grades, is a pure unity?

No: there has already been discrimination within the Intellectual-Principle; the Act of the soul is little more than a reading of this.

First and last is in the Ideas not a matter of time, and so does not bring time into the soul's intuition of earlier and later among them. There is a grading by order as well: the ordered disposition of some growing thing begins with root and reaches to topmost point, but, to one seeing the plant as a whole, there is no other first and last than simply that of the order.

Still, the soul [in this intuition within the divine] looks to what is a unity; next it entertains multiplicity, all that is: how explain this grasping first of the unity and later of the rest?

The explanation is that the unity of this power [the Supreme] is such as to allow of its being multiple to another principle [the soul], to which it is all things and therefore does not present itself as one indivisible object of intuition: its activities do not [like its essence] fall under the rule of unity; they are for ever multiple in virtue of that abiding power, and in their outgoing they actually become all things.

For with the Intellectual or Supreme- considered as distinct from the One- there is already the power of harbouring that Principle of Multiplicity, the source of things not previously existent in its superior.

2. Enough on that point: we come now to the question of memory of the personality?

There will not even be memory of the personality; no thought that the contemplator is the self- Socrates, for example- or that it is Intellect or Soul. In this connection it should be borne in mind that, in contemplative vision, especially when it is vivid, we are not at

the time aware of our own personality; we are in possession of ourselves but the activity is towards the object of vision with which the thinker becomes identified; he has made himself over as matter to be shaped; he takes ideal form under the action of the vision while remaining, potentially, himself. This means that he is actively himself when he has intellection of nothing.

Or, if he is himself [pure and simple], he is empty of all: if, on the contrary, he is himself [by the self-possession of contemplation] in such a way as to be identified with what is all, then by the act of self-intellection he has the simultaneous intellection of all: in such a case self-intuition by personal activity brings the intellection, not merely of the self, but also of the total therein embraced; and similarly the intuition of the total of things brings that of the personal self as included among all.

But such a process would appear to introduce into the Intellectual that element of change against which we ourselves have only now been protesting?

The answer is that, while unchangeable identity is essential to the Intellectual-Principle, the soul, lying so to speak on the borders of the Intellectual Realm, is amenable to change; it has, for example, its inward advance, and obviously anything that attains position near to something motionless does so by a change directed towards that unchanging goal and is not itself motionless in the same degree. Nor is it really change to turn from the self to the constituents of self or from those constituents to the self; and in this case the contemplator is the total; the duality has become unity.

None the less the soul, even in the Intellectual Realm, is under the dispensation of a variety confronting it and a content of its own?

No: once pure in the Intellectual, it too possesses that same unchangeableness: for it possesses identity of essence; when it is in that region it must of necessity enter into oneness with the Intellectual-Principle by the sheer fact of its self-orientation, for by that intention all interval disappears; the soul advances and is taken into unison, and in that association becomes one with the Intellectual-Principle- but not to its own destruction: the two are one, and two. In such a state there is no question of stage and change: the soul, without motion [but by right of its essential being] would be intent upon its intellectual act, and in possession, simultaneously, of its self-awareness; for it has become one simultaneous existence with the Supreme.

3. But it leaves that conjunction; it cannot suffer that unity; it falls in love with its own powers and possessions, and desires to stand apart; it leans outward so to speak: then, it appears to acquire a memory of itself.

In this self-memory a distinction is to be made; the memory dealing with the Intellectual Realm upbears the soul, not to fall; the memory of things here bears it downwards to this universe; the intermediate memory dealing with the heavenly sphere holds it there too; and, in all its memory, the thing it has in mind it is and grows to; for this bearing-in-mind must be either intuition [i.e., knowledge with identity] or representation by image: and the imaging in the case of the is not a taking in of something but is vision

and condition- so much so, that, in its very sense- sight, it is the lower in the degree in which it penetrates the object. Since its possession of the total of things is not primal but secondary, it does not become all things perfectly [in becoming identical with the All in the Intellectual]; it is of the boundary order, situated between two regions, and has tendency to both.

4. In that realm it has also vision, through the Intellectual-Principle, of The Good which does not so hold to itself as not to reach the soul; what intervenes between them is not body and therefore is no hindrance- and, indeed, where bodily forms do intervene there is still access in many ways from the primal to the tertiaries.

If, on the contrary, the soul gives itself to the inferior, the same principle of penetration comes into play, and it possesses itself, by memory and imagination, of the thing it desired: and hence the memory, even dealing with the highest, is not the highest. Memory, of course, must be understood not merely of what might be called the sense of remembrance, but so as to include a condition induced by the past experience or vision. There is such a thing as possessing more powerfully without consciousness than in full knowledge; with full awareness the possession is of something quite distinct from the self; unconscious possession runs very close to identity, and any such approach to identification with the lower means the deeper fall of the soul.

If the soul, on abandoning its place in the Supreme, revives its memories of the lower, it must have in some form possessed them even there though the activity of the beings in that realm kept them in abeyance: they could not be in the nature of impressions permanently adopted- a notion which would entail absurdities- but were no more than a potentiality realized after return. When that energy of the Intellectual world ceases to tell upon the soul, it sees what it saw in the earlier state before it revisited the Supreme.

5. But this power which determines memory is it also the principle by which the Supreme becomes effective in us?

At any time when we have not been in direct vision of that sphere, memory is the source of its activity within us; when we have possessed that vision, its presence is due to the principle by which we enjoyed it: this principle awakens where it wakens; and it alone has vision in that order; for this is no matter to be brought to us by way of analogy, or by the syllogistic reasoning whose grounds lie elsewhere; the power which, even here, we possess of discoursing upon the Intellectual Beings is vested, as we show, in that principle which alone is capable of their contemplation. That, we must awaken, so to speak, and thus attain the vision of the Supreme, as one, standing on some lofty height and lifting his eyes, sees what to those that have not mounted with him is invisible.

Memory, by this account, commences after the soul has left the higher spheres; it is first known in the celestial period.

A soul that has descended from the Intellectual region to the celestial and there comes to rest, may very well be understood to recognize many other souls known in its former state supposing that, as we have said, it retains recollection of much that it knew here.

This recognition would be natural if the bodies with which those souls are vested in the celestial must reproduce the former appearance; supposing the spherical form [of the stars inhabited by souls in the mid-realm] means a change of appearance, recognition would go by character, by the distinctive quality of personality: this is not fantastic; conditions changing need not mean a change of character. If the souls have mutual conversation, this too would mean recognition.

But those whose descent from the Intellectual is complete, how is it with them?

They will recall their memories, of the same things, but with less force than those still in the celestial, since they have had other experiences to remember, and the lapse of time will have utterly obliterated much of what was formerly present to them.

But what way of remembering the Supreme is left if the souls have turned to the sense-known kosmos, and are to fall into this sphere of process?

They need not fall to the ultimate depth: their downward movement may be checked at some one moment of the way; and as long as they have not touched the lowest of the region of process [the point at which non-being begins] there is nothing to prevent them rising once more.

6. Souls that descend, souls that change their state- these, then, may be said to have memory, which deals with what has come and gone; but what subjects of remembrance can there be for souls whose lot is to remain unchanged?

The question touches memory in the stars in general, and also in the sun and moon and ends by dealing with the soul of the All, even by audaciously busying itself with the memories of Zeus himself. The enquiry entails the examination and identification of acts of understanding and of reasoning in these beings, if such acts take place.

Now if, immune from all lack, they neither seek nor doubt, and never learn, nothing being absent at any time from their knowledge- what reasonings, what processes of rational investigation, can take place in them, what acts of the understanding?

Even as regards human concerns they have no need for observation or method; their administration of our affairs and of earth's in general does not go so; the right ordering, which is their gift to the universe, is effected by methods very different.

In other words, they have seen God and they do not remember?

Ah, no: it is that they see God still and always, and that, as long as they see, they cannot tell themselves they have had the vision; such reminiscence is for souls that have lost it.

7. Well but can they not tell themselves that yesterday, or last year, they moved round the earth, that they lived yesterday or at any given moment in their lives?

Their living is eternal, and eternity is an unchanging unity. To identify a yesterday or a last year in their movement would be like isolating the movement of one of the feet, and finding a this or a that and an entire series in what is a single act. The movement of the celestial beings is one movement: it is our measuring that presents us with many movements, and with distinct days determined by intervening nights: There all is one day; series has no place; no yesterday, no last year.

Still: the space traversed is different; there are the various sections of the Zodiac: why, then, should not the soul say "I have traversed that section and now I am in this other?" If, also, it looks down over the concerns of men, must it not see the changes that befall them, that they are not as they were, and, by that observation, that the beings and the things concerned were otherwise formerly? And does not that mean memory?

8. But, we need not record in memory all we see; mere incidental concomitants need not occupy the imagination; when things vividly present to intuition, or knowledge, happen to occur in concrete form, it is not necessary- unless for purposes of a strictly practical administration- to pass over that direct acquaintance, and fasten upon the partial sense-presentation, which is already known in the larger knowledge, that of the Universe.

I will take this point by point:

First: it is not essential that everything seen should be laid up in the mind; for when the object is of no importance, or of no personal concern, the sensitive faculty, stimulated by the differences in the objects present to vision, acts without accompaniment of the will, and is alone in entertaining the impression. The soul does not take into its deeper recesses such differences as do not meet any of its needs, or serve any of its purposes. Above all, when the soul's act is directed towards another order, it must utterly reject the memory of such things, things over and done with now, and not even taken into knowledge when they were present.

On the second point: circumstances, purely accidental, need not be present to the imaging faculty, and if they do so appear they need not be retained or even observed, and in fact the impression of any such circumstance does not entail awareness. Thus in local movement, if there is no particular importance to us in the fact that we pass through first this and then that portion of air, or that we proceed from some particular point, we do not take notice, or even know it as we walk. Similarly, if it were of no importance to us to accomplish any given journey, mere movement in the air being the main concern, we would not trouble to ask at what particular point of place we were, or what distance we had traversed; if we have to observe only the act of movement and not its duration, nothing to do which obliges us to think of time, the minutes are not recorded in our minds.

And finally, it is of common knowledge that, when the understanding is possessed of the entire act undertaken and has no reason to foresee any departure from the normal, it will no longer observe the detail; in a process unfailingly repeated without variation, attention to the unvarying detail is idleness.

So it is with the stars. They pass from point to point, but they move on their own affairs and not for the sake of traversing the space they actually cover; the vision of the things that appear on the way, the journey by, nothing of this is their concern: their passing this or that is of accident not of essence, and their intention is to greater objects: moreover each of them journeys, unchangeably, the same unchanging way; and again, there is no question to them of the time they spend in any given section of the journey, even supposing time division to be possible in the case. All this granted, nothing makes it necessary that they should have any memory of places or times traversed. Besides this life of the ensouled stars is one identical thing [since they are one in the All-Soul] so that their very spatial movement is pivoted upon identity and resolves itself into a movement not spatial but vital, the movement of a single living being whose act is directed to itself, a being which to anything outside is at rest, but is in movement by dint of the inner life it possesses, the eternal life. Or we may take the comparison of the movement of the heavenly bodies to a choral dance; if we think of it as a dance which comes to rest at some given period, the entire dance, accomplished from beginning to end, will be perfect while at each partial stage it was imperfect: but if the dance is a thing of eternity, it is in eternal perfection. And if it is in eternal perfection, it has no points of time and place at which it will achieve perfection; it will, therefore, have no concern about attaining to any such points: it will, therefore, make no measurements of time or place; it will have, therefore, no memory of time and place.

If the stars live a blessed life in their vision of the life inherent in their souls, and if, by force of their souls' tendency to become one, and by the light they cast from themselves upon the entire heavens, they are like the strings of a lyre which, being struck in tune, sing a melody in some natural scale... if this is the way the heavens, as one, are moved, and the component parts in their relation to the whole- the sidereal system moving as one, and each part in its own way, to the same purpose, though each, too, hold its own place- then our doctrine is all the more surely established; the life of the heavenly bodies is the more clearly an unbroken unity.

9. But Zeus- ordering all, governor, guardian and disposer, possessor for ever of the kingly soul and the kingly intellect, bringing all into being by his providence, and presiding over all things as they come, administering all under plan and system, unfolding the periods of the kosmos, many of which stand already accomplished- would it not seem inevitable that, in this multiplicity of concern, Zeus should have memory of all the periods, their number and their differing qualities? Contriving the future, co-ordinating, calculating for what is to be, must he not surely be the chief of all in remembering, as he is chief in producing?

Even this matter of Zeus' memory of the kosmic periods is difficult; it is a question of their being numbered, and of his knowledge of their number. A determined number would mean that the All had a beginning in time [which is not so]; if the periods are unlimited, Zeus cannot know the number of his works.

The answer is that he will know all to be one thing existing in virtue of one life for ever: it is in this sense that the All is unlimited, and thus Zeus' knowledge of it will not be as of

something seen from outside but as of something embraced in true knowledge, for this unlimited thing is an eternal indweller within himself- or, to be more accurate, eternally follows upon him- and is seen by an indwelling knowledge; Zeus knows his own unlimited life, and, in that knowledge knows the activity that flows from him to the kosmos; but he knows it in its unity not in its process.

10. The ordering principle is twofold; there is the principle known to us as the Demiurge and there is the Soul of the All; we apply the appellation "Zeus" sometimes to the Demiurge and sometimes to the principle conducting the universe.

When under the name of Zeus we are considering the Demiurge we must leave out all notions of stage and progress, and recognize one unchanging and timeless life.

But the life in the kosmos, the life which carries the leading principle of the universe, still needs elucidation; does it operate without calculation, without searching into what ought to be done?

Yes: for what must be stands shaped before the kosmos, and is ordered without any setting in order: the ordered things are merely the things that come to be; and the principle that brings them into being is Order itself; this production is an act of a soul linked with an unchangeably established wisdom whose reflection in that soul is Order. It is an unchanging wisdom, and there can therefore be no changing in the soul which mirrors it, not sometimes turned towards it, and sometimes away from it- and in doubt because it has turned away- but an unremitting soul performing an unvarying task.

The leading principle of the universe is a unity- and one that is sovereign without break, not sometimes dominant and sometimes dominated. What source is there for any such multiplicity of leading principles as might result in contest and hesitation? And this governing unity must always desire the one thing: what could bring it to wish now for this and now for that, to its own greater perplexing? But observe: no perplexity need follow upon any development of this soul essentially a unity. The All stands a multiple thing no doubt, having parts, and parts dashing with parts, but that does not imply that it need be in doubt as to its conduct: that soul does not take its essence from its ultimates or from its parts, but from the Primals; it has its source in the First and thence, along an unhindered path, it flows into a total of things, conferring grace, and, because it remains one same thing occupied in one task, dominating. To suppose it pursuing one new object after another is to raise the question whence that novelty comes into being; the soul, besides, would be in doubt as to its action; its very work, the kosmos, would be the less well done by reason of the hesitancy which such calculations would entail.

11. The administration of the kosmos is to be thought of as that of a living unit: there is the action determined by what is external, and has to do with the parts, and there is that determined by the internal and by the principle: thus a doctor basing his treatment on externals and on the parts directly affected will often be baffled and obliged to all sorts of calculation, while Nature will act on the basis of principle and need no deliberation. And in so far as the kosmos is a conducted thing, its administration and its administrator will follow not the way of the doctor but the way of Nature.

And in the case of the universe, the administration is all the less complicated from the fact that the soul actually circumscribes, as parts of a living unity, all the members which it conducts. For all the Kinds included in the universe are dominated by one Kind, upon which they follow, fitted into it, developing from it, growing out of it, just as the Kind manifested in the bough is related to the Kind in the tree as a whole.

What place, then, is there for reasoning, for calculation, what place for memory, where wisdom and knowledge are eternal, unfailingly present, effective, dominant, administering in an identical process?

The fact that the product contains diversity and difference does not warrant the notion that the producer must be subject to corresponding variations. On the contrary, the more varied the product, the more certain the unchanging identity of the producer: even in the single animal the events produced by Nature are many and not simultaneous; there are the periods, the developments at fixed epochs- horns, beard, maturing breasts, the acme of life, procreation- but the principles which initially determined the nature of the being are not thereby annulled; there is process of growth, but no diversity in the initial principle. The identity underlying all the multiplicity is confirmed by the fact that the principle constituting the parent is exhibited unchanged, undiminished, in the offspring. We have reason, then, for thinking that one and the same wisdom envelops both, and that this is the unalterable wisdom of the kosmos taken as a whole; it is manifold, diverse and yet simplex, presiding over the most comprehensive of living beings, and in no wise altered within itself by this multiplicity, but stably one Reason-Principle, the concentrated totality of things: if it were not thus all things, it would be a wisdom of the later and partial, not the wisdom of the Supreme.

12. It may be urged that all the multiplicity and development are the work of Nature, but that, since there is wisdom within the All, there must be also, by the side of such natural operation, acts of reasoning and of memory.

But this is simply a human error which assumes wisdom to be what in fact is unwisdom, taking the search for wisdom to be wisdom itself. For what can reasoning be but a struggle, the effort to discover the wise course, to attain the principle which is true and derives from real-being? To reason is like playing the cithara for the sake of achieving the art, like practising with a view to mastery, like any learning that aims at knowing. What reasoners seek, the wise hold: wisdom, in a word, is a condition in a being that possesses repose. Think what happens when one has accomplished the reasoning process: as soon as we have discovered the right course, we cease to reason: we rest because we have come to wisdom. If then we are to range the leading principle of the All among learners, we must allow it reasonings, perplexities and those acts of memory which link the past with the present and the future: if it is to be considered as a knower, then the wisdom within it consists in a rest possessing the object [absolved, therefore, from search and from remembrance].

Again, if the leading principle of the universe knows the future as it must- then obviously it will know by what means that future is to come about; given this knowledge, what

further need is there of its reasoning towards it, or confronting past with present? And, of course, this knowledge of things to come- admitting it to exist- is not like that of the diviners; it is that of the actual causing principles holding the certainty that the thing will exist, the certainty inherent in the all-disposers, above perplexity and hesitancy; the notion is constituent and therefore unvarying. The knowledge of future things is, in a word, identical with that of the present; it is a knowledge in repose and thus a knowledge transcending the processes of cogitation.

If the leading principle of the universe does not know the future which it is of itself to produce, it cannot produce with knowledge or to purpose; it will produce just what happens to come, that is to say by haphazard. As this cannot be, it must create by some stable principle; its creations, therefore, will be shaped in the model stored up in itself; there can be no varying, for, if there were, there could also be failure.

The produced universe will contain difference, but its diversities spring not from its own action but from its obedience to superior principles which, again, spring from the creating power, so that all is guided by Reason-Principles in their series; thus the creating power is in no sense subjected to experimenting, to perplexity, to that preoccupation which to some minds makes the administration of the All seem a task of difficulty. Preoccupation would obviously imply the undertaking of alien tasks, some business- that would mean- not completely within the powers; but where the power is sovereign and sole, it need take thought of nothing but itself and its own will, which means its own wisdom, since in such a being the will is wisdom. Here, then, creating makes no demand, since the wisdom that goes to it is not sought elsewhere, but is the creator's very self, drawing on nothing outside- not, therefore, on reasoning or on memory, which are handlings of the external.

13. But what is the difference between the Wisdom thus conducting the universe and the principle known as Nature?

This Wisdom is a first [within the All-Soul] while Nature is a last: for Nature is an image of that Wisdom, and, as a last in the soul, possesses only the last of the Reason-Principle: we may imagine a thick waxen seal, in which the imprint has penetrated to the very uttermost film so as to show on both sides, sharp cut on the upper surface, faint on the under. Nature, thus, does not know, it merely produces: what it holds it passes, automatically, to its next; and this transmission to the corporeal and material constitutes its making power: it acts as a thing warmed, communicating to what lies in next contact to it the principle of which it is the vehicle so as to make that also warm in some less degree.

Nature, being thus a mere communicator, does not possess even the imaging act. There is [within the Soul] intellection, superior to imagination; and there is imagination standing midway between that intellection and the impression of which alone Nature is capable. For Nature has no perception or consciousness of anything; imagination [the imaging faculty] has consciousness of the external, for it enables that which entertains the image to have knowledge of the experience encountered, while Nature's function is to engender- of itself though in an act derived from the active principle [of the soul].

Thus the Intellectual-Principle possesses: the Soul of the All eternally receives from it; this is the soul's life; its consciousness is its intellection of what is thus eternally present to it; what proceeds from it into Matter and is manifested there is Nature, with which- or even a little before it- the series of real being comes to an end, for all in this order are the ultimates of the intellectual order and the beginnings of the imitative.

There is also the decided difference that Nature operates toward soul, and receives from it: soul, near to Nature but superior, operates towards Nature but without receiving in turn; and there is the still higher phase [the purely Intellectual] with no action whatever upon body or upon Matter.

14. Of the corporeal thus brought into being by Nature the elemental materials of things are its very produce, but how do animal and vegetable forms stand to it?

Are we to think of them as containers of Nature present within them?

Light goes away and the air contains no trace of it, for light and air remain each itself, never coalescing: is this the relation of Nature to the formed object?

It is rather that existing between fire and the object it has warmed: the fire withdrawn, there remains a certain warmth, distinct from that in the fire, a property, so to speak, of the object warmed. For the shape which Nature imparts to what it has moulded must be recognized as a form quite distinct from Nature itself, though it remains a question to be examined whether besides this [specific] form there is also an intermediary, a link connecting it with Nature, the general principle.

The difference between Nature and the Wisdom described as dwelling in the All has been sufficiently dealt with.

15. But there is a difficulty affecting this entire settlement: Eternity is characteristic of the Intellectual-Principle, time of the soul- for we hold that time has its substantial being in the activity of the soul, and springs from soul- and, since time is a thing of division and comports a past, it would seem that the activity producing it must also be a thing of division, and that its attention to that past must imply that even the All-Soul has memory? We repeat, identity belongs to the eternal, time must be the medium of diversity; otherwise there is nothing to distinguish them, especially since we deny that the activities of the soul can themselves experience change.

Can we escape by the theory that, while human souls- receptive of change, even to the change of imperfection and lack- are in time, yet the Soul of the All, as the author of time, is itself timeless? But if it is not in time, what causes it to engender time rather than eternity?

The answer must be that the realm it engenders is not that of eternal things but a realm of things enveloped in time: it is just as the souls [under, or included in, the All-Soul] are not in time, but some of their experiences and productions are. For a soul is eternal, and

is before time; and what is in time is of a lower order than time itself: time is folded around what is in time exactly as- we read- it is folded about what is in place and in number.

16. But if in the soul thing follows thing, if there is earlier and later in its productions, if it engenders or creates in time, then it must be looking towards the future; and if towards the future, then towards the past as well?

No: prior and past are in the things its produces; in itself nothing is past; all, as we have said, is one simultaneous grouping of Reason-Principles. In the engendered, dissimilarity is not compatible with unity, though in the Reason-Principles supporting the engendered such unity of dissimilars does occur- hand and foot are in unity in the Reason-Principle [of man], but apart in the realm of sense. Of course, even in that ideal realm there is apartness, but in a characteristic mode, just as in a mode, there is priority.

Now, apartness may be explained as simply differentiation: but how account for priority unless on the assumption of some ordering principle arranging from above, and in that disposal necessarily affirming a serial order?

There must be such a principle, or all would exist simultaneously; but the indicated conclusion does not follow unless order and ordering principle are distinct; if the ordering principle is Primal Order, there is no such affirmation of series; there is simply making, the making of this thing after that thing. The affirmation would imply that the ordering principle looks away towards Order and therefore is not, itself, Order.

But how are Order and this orderer one and the same?

Because the ordering principle is no conjoint of matter and idea but is soul, pure idea, the power and energy second only to the Intellectual-Principle: and because the succession is a fact of the things themselves, inhibited as they are from this comprehensive unity. The ordering soul remains august, a circle, as we may figure it, in complete adaptation to its centre, widening outward, but fast upon it still, an outspreading without interval.

The total scheme may be summarized in the illustration of The Good as a centre, the Intellectual-Principle as an unmoving circle, the Soul as a circle in motion, its moving being its aspiration: the Intellectual-Principle possesses and has ever embraced that which is beyond being; the soul must seek it still: the sphere of the universe, by its possession of the soul thus aspirant, is moved to the aspiration which falls within its own nature; this is no more than such power as body may have, the mode of pursuit possible where the object pursued is debarred from entrance; it is the motion of coiling about, with ceaseless return upon the same path- in other words, it is circuit.

17. But how comes it that the intuitions and the Reason-Principles of the soul are not in the same timeless fashion within ourselves, but that here the later of order is converted into a later of time- bringing in all these doubts?

Is it because in us the governing and the answering principles are many and there is no sovereign unity?

That condition; and, further, the fact that our mental acts fall into a series according to the succession of our needs, being not self-determined but guided by the variations of the external: thus the will changes to meet every incident as each fresh need arises and as the external impinges in its successive things and events.

A variety of governing principles must mean variety in the images formed upon the representative faculty, images not issuing from one internal centre, but, by difference of origin and of acting- point, strange to each other, and so bringing compulsion to bear upon the movements and efficiencies of the self.

When the desiring faculty is stirred, there is a presentment of the object- a sort of sensation, in announcement and in picture, of the experience- calling us to follow and to attain: the personality, whether it resists or follows and procures, is necessarily thrown out of equilibrium. The same disturbance is caused by passion urging revenge and by the needs of the body; every other sensation or experience effects its own change upon our mental attitude; then there is the ignorance of what is good and the indecision of a soul [a human soul] thus pulled in every direction; and, again, the interaction of all these perplexities gives rise to yet others.

But do variations of judgement affect that very highest in us?

No: the doubt and the change of standard are of the Conjoint [of the soul-phase in contact with body]; still, the right reason of that highest is weaker by being given over to inhabit this mingled mass: not that it sinks in its own nature: it is much as amid the tumult of a public meeting the best adviser speaks but fails to dominate; assent goes to the roughest of the brawlers and roarers, while the man of good counsel sits silent, ineffectual, overwhelmed by the uproar of his inferiors.

The lowest human type exhibits the baser nature; the man is a compost calling to mind inferior political organization: in the mid-type we have a citizenship in which some better section sways a demotic constitution not out of control: in the superior type the life is aristocratic; it is the career of one emancipated from what is a base in humanity and tractable to the better; in the finest type, where the man has brought himself to detachment, the ruler is one only, and from this master principle order is imposed upon the rest, so that we may think of a municipality in two sections, the superior city and, kept in hand by it, the city of the lower elements.

18. There remains the question whether the body possesses any force of its own- so that, with the incoming of the soul, it lives in some individuality- or whether all it has is this Nature we have been speaking of, the superior principle which enters into relations with it.

Certainly the body, container of soul and of nature, cannot even in itself be as a soulless

form would be: it cannot even be like air traversed by light; it must be like air storing heat: the body holding animal or vegetive life must hold also some shadow of soul; and it is body thus modified that is the seat of corporeal pains and pleasures which appear before us, the true human being, in such a way as to produce knowledge without emotion. By "us, the true human being" I mean the higher soul for, in spite of all, the modified body is not alien but attached to our nature and is a concern to us for that reason: "attached," for this is not ourselves nor yet are we free of it; it is an accessory and dependent of the human being; "we" means the master-principle; the conjoint, similarly is in its own way an "ours"; and it is because of this that we care for its pain and pleasure, in proportion as we are weak rather than strong, gripped rather than working towards detachment.

The other, the most honourable phase of our being, is what we think of as the true man and into this we are penetrating.

Pleasure and pain and the like must not be attributed to the soul alone, but to the modified body and to something intermediary between soul and body and made up of both. A unity is independent: thus body alone, a lifeless thing, can suffer no hurt- in its dissolution there is no damage to the body, but merely to its unity- and soul in similar isolation cannot even suffer dissolution, and by its very nature is immune from evil.

But when two distinct things become one in an artificial unity, there is a probable source of pain to them in the mere fact that they were inapt to partnership. This does not, of course, refer to two bodies; that is a question of one nature; and I am speaking of two natures. When one distinct nature seeks to associate itself with another, a different, order of being- the lower participating in the higher, but unable to take more than a faint trace of it- then the essential duality becomes also a unity, but a unity standing midway between what the lower was and what it cannot absorb, and therefore a troubled unity; the association is artificial and uncertain, inclining now to this side and now to that in ceaseless vacillation; and the total hovers between high and low, telling, downward bent, of misery but, directed to the above, of longing for unison.

19. Thus what we know as pleasure and pain may be identified: pain is our perception of a body despoiled, deprived of the image of the soul; pleasure our perception of the living frame in which the image of the soul is brought back to harmonious bodily operation. The painful experience takes place in that living frame; but the perception of it belongs to the sensitive phase of the soul, which, as neighbouring the living body, feels the change and makes it known to the principle, the imaging faculty, into which the sensations finally merge; then the body feels the pain, or at least the body is affected: thus in an amputation, when the flesh is cut the cutting is an event within the material mass; but the pain felt in that mass is there felt because it is not a mass pure and simple, but a mass under certain [non-material] conditions; it is to that modified substance that the sting of the pain is present, and the soul feels it by an adoption due to what we think of as proximity.

And, itself unaffected, it feels the corporeal conditions at every point of its being, and is thereby enabled to assign every condition to the exact spot at which the wound or pain

occurs. Being present as a whole at every point of the body, if it were itself affected the pain would take it at every point, and it would suffer as one entire being, so that it could not know, or make known, the spot affected; it could say only that at the place of its presence there existed pain- and the place of its presence is the entire human being. As things are, when the finger pains the man is in pain because one of his members is in pain; we class him as suffering, from his finger being painful, just as we class him as fair from his eyes being blue.

But the pain itself is in the part affected unless we include in the notion of pain the sensation following upon it, in which case we are saying only that distress implies the perception of distress. But [this does not mean that the soul is affected] we cannot describe the perception itself as distress; it is the knowledge of the distress and, being knowledge, is not itself affected, or it could not know and convey a true message: a messenger, affected, overwhelmed by the event, would either not convey the message or not convey it faithfully.

20. As with bodily pain and pleasure so with the bodily desires; their origin, also, must be attributed to what thus stands midway, to that Nature we described as the corporeal.

Body undetermined cannot be imagined to give rise to appetite and purpose, nor can pure soul be occupied about sweet and bitter: all this must belong to what is specifically body but chooses to be something else as well, and so has acquired a restless movement unknown to the soul and by that acquisition is forced to aim at a variety of objects, to seek, as its changing states demand, sweet or bitter, water or warmth, with none of which it could have any concern if it remained untouched by life.

In the case of pleasure and pain we showed how upon distress follows the knowledge of it, and that the soul, seeking to alienate what is causing the condition, inspires a withdrawal which the member primarily affected has itself indicated, in its own mode, by its contraction. Similarly in the case of desire: there is the knowledge in the sensation [the sensitive phase of the soul] and in the next lower phase, that described as the "Nature" which carries the imprint of the soul to the body; that Nature knows the fully formed desire which is the culmination of the less formed desire in body; sensation knows the image thence imprinted upon the Nature; and from the moment of the sensation the soul, which alone is competent, acts upon it, sometimes procuring, sometimes on the contrary resisting, taking control and paying heed neither to that which originated the desire nor to that which subsequently entertained it.

But why, thus, two phases of desire; why should not the body as a determined entity [the living total] be the sole desirer?

Because there are [in man] two distinct things, this Nature and the body, which, through it, becomes a living being: the Nature precedes the determined body which is its creation, made and shaped by it; it cannot originate the desires; they must belong to the living body meeting the experiences of this life and seeking in its distress to alter its state, to substitute pleasure for pain, sufficiency for want: this Nature must be like a mother reading the wishes of a suffering child, and seeking to set it right and to bring it

back to herself; in her search for the remedy she attaches herself by that very concern to the sufferer's desire and makes the child's experience her own.

In sum, the living body may be said to desire of its own motion in a fore-desiring with, perhaps, purpose as well; Nature desires for, and because of, that living body; granting or withholding belongs to another again, the higher soul.

21. That this is the phase of the human being in which desire takes its origin is shown by observation of the different stages of life; in childhood, youth, maturity, the bodily desires differ; health or sickness also may change them, while the [psychic] faculty is of course the same through all: the evidence is clear that the variety of desire in the human being results from the fact that he is a corporeal entity, a living body subject to every sort of vicissitude.

The total movement of desire is not always stirred simultaneously with what we call the impulses to the satisfaction even of the lasting bodily demands; it may refuse assent to the idea of eating or drinking until reason gives the word: this shows us desire- the degree of it existing in the living body- advancing towards some object, with Nature [the lower soul-phase] refusing its co-operation and approval, and as sole arbiter between what is naturally fit and unfit, rejecting what does not accord with the natural need.

We may be told that the changing state of the body is sufficient explanation of the changing desires in the faculty; but that would require the demonstration that the changing condition of a given entity could effect a change of desire in another, in one which cannot itself gain by the gratification; for it is not the desiring faculty that profits by food, liquid, warmth, movement, or by any relief from overplenty or any filling of a void; all such services touch the body only.

22. And as regards vegetal forms? Are we to imagine beneath the leading principle [the "Nature" phase] some sort of corporeal echo of it, something that would be tendency or desire in us and is growth in them? Or are we to think that, while the earth [which nourishes them] contains the principle of desire by virtue of containing soul, the vegetal realm possesses only this latter reflection of desire?

The first point to be decided is what soul is present in the earth.

Is it one coming from the sphere of the All, a radiation upon earth from that which Plato seems to represent as the only thing possessing soul primarily? Or are we to go by that other passage where he describes earth as the first and oldest of all the gods within the scope of the heavens, and assigns to it, as to the other stars, a soul peculiar to itself?

It is difficult to see how earth could be a god if it did not possess a soul thus distinct: but the whole matter is obscure since Plato's statements increase or at least do not lessen the perplexity. It is best to begin by facing the question as a matter of reasoned investigation.

That earth possesses the vegetal soul may be taken as certain from the vegetation

upon it. But we see also that it produces animals; why then should we not argue that it is itself animated? And, animated, no small part of the All, must it not be plausible to assert that it possesses an Intellectual-Principle by which it holds its rank as a god? If this is true of every one of the stars, why should it not be so of the earth, a living part of the living All? We cannot think of it as sustained from without by an alien soul and incapable of containing one appropriate to itself.

Why should those fiery globes be receptive of soul, and the earthly globe not? The stars are equally corporeal, and they lack the flesh, blood, muscle, and pliant material of earth, which, besides, is of more varied content and includes every form of body. If the earth's immobility is urged in objection, the answer is that this refers only to spatial movement.

But how can perception and sensation [implied in ensoulment] be supposed to occur in the earth?

How do they occur in the stars? Feeling does not belong to fleshy matter: soul to have perception does not require body; body, on the contrary, requires soul to maintain its being and its efficiency, judgement [the foundation of perception] belongs to the soul which overlooks the body, and, from what is experienced there, forms its decisions.

But, we will be asked to say what are the experiences, within the earth, upon which the earth-soul is thus to form its decisions: certainly vegetal forms, in so far as they belong to earth have no sensation or perception: in what then, and through what, does such sensation take place, for sensation without organs is too rash a notion. Besides, what would this sense-perception profit the soul? It could not be necessary to knowledge: surely the consciousness of wisdom suffices to beings which have nothing to gain from sensation?

This argument is not to be accepted: it ignores the consideration that, apart from all question of practical utility, objects of sense provide occasion for a knowing which brings pleasure: thus we ourselves take delight in looking upon sun, stars, sky, landscape, for their own sake. But we will deal with this point later: for the present we ask whether the earth has perceptions and sensations, and if so through what vital members these would take place and by what method: this requires us to examine certain difficulties, and above all to decide whether earth could have sensation without organs, and whether this would be directed to some necessary purpose even when incidentally it might bring other results as well.

23. A first principle is that the knowing of sensible objects is an act of the soul, or of the living conjoint, becoming aware of the quality of certain corporeal entities, and appropriating the ideas present in them.

This apprehension must belong either to the soul isolated, self-acting, or to soul in conjunction with some other entity.

Isolated, self-acting, how is it possible? Self-acting, it has knowledge of its own content,

and this is not perception but intellection: if it is also to know things outside itself it can grasp them only in one of two ways: either it must assimilate itself to the external objects, or it must enter into relations with something that has been so assimilated.

Now as long as it remains self-centred it cannot assimilate: a single point cannot assimilate itself to an external line: even line cannot adapt itself to line in another order, line of the intellectual to line of the sensible, just as fire of the intellectual and man of the intellectual remain distinct from fire and man of the sensible. Even Nature, the soul-phase which brings man into being, does not come to identity with the man it shapes and informs: it has the faculty of dealing with the sensible, but it remains isolated, and, its task done, ignores all but the intellectual as it is itself ignored by the sensible and utterly without means of grasping it.

Suppose something visible lying at a distance: the soul sees it; now, admitting to the full that at first only the pure idea of the thing is seized- a total without discerned part- yet in the end it becomes to the seeing soul an object whose complete detail of colour and form is known: this shows that there is something more here than the outlying thing and the soul; for the soul is immune from experience; there must be a third, something not thus exempt; and it is this intermediate that accepts the impressions of shape and the like.

This intermediate must be able to assume the modifications of the material object so as to be an exact reproduction of its states, and it must be of the one elemental-stuff: it, thus, will exhibit the condition which the higher principle is to perceive; and the condition must be such as to preserve something of the originating object, and yet not be identical with it: the essential vehicle of knowledge is an intermediary which, as it stands between the soul and the originating object, will, similarly, present a condition midway between the two spheres, of sense and the intellectual-linking the extremes, receiving from one side to exhibit to the other, in virtue of being able to assimilate itself to each. As an instrument by which something is to receive knowledge, it cannot be identical with either the knower or the known: but it must be apt to likeness with both- akin to the external object by its power of being affected, and to the internal, the knower, by the fact that the modification it takes becomes an idea.

If this theory of ours is sound, bodily organs are necessary to sense-perception, as is further indicated by the reflection that the soul entirely freed of body can apprehend nothing in the order of sense.

The organ must be either the body entire or some member set apart for a particular function; thus touch for one, vision for another. The tools of craftsmanship will be seen to be intermediaries between the judging worker and the judged object, disclosing to the experimenter the particular character of the matter under investigation: thus a ruler, representing at once the straightness which is in the mind and the straightness of a plank, is used as an intermediary by which the operator proves his work.

Some questions of detail remain for consideration elsewhere: Is it necessary that the object upon which judgement or perception is to take place should be in contact with the

organ of perception, or can the process occur across space upon an object at a distance? Thus, is the heat of a fire really at a distance from the flesh it warms, the intermediate space remaining unmodified; is it possible to see colour over a sheer blank intervening between the colour and the eye, the organ of vision reaching to its object by its own power?

For the moment we have one certainty, that perception of things of sense belongs to the embodied soul and takes place through the body.

24. The next question is whether perception is concerned only with need.

The soul, isolated, has no sense-perception; sensations go with the body; sensation itself therefore must occur by means of the body to which the sensations are due; it must be something brought about by association with the body.

Thus either sensation occurs in a soul compelled to follow upon bodily states- since every graver bodily experience reaches at last to soul- or sensation is a device by which a cause is dealt with before it becomes so great as actually to injure us or even before it has begun to make contact.

At this, sense-impressions would aim at utility. They may serve also to knowledge, but that could be service only to some being not living in knowledge but stupefied as the result of a disaster, and the victim of a Lethe calling for constant reminding: they would be useless to any being free from either need or forgetfulness. This reflection enlarges the enquiry: it is no longer a question of earth alone, but of the whole star-system, all the heavens, the kosmos entire. For it would follow that, in the sphere of things not exempt from modification, sense-perception would occur in every part having relation to any other part: in a whole, however- having relation only to itself, immune, universally self-directed and self-possessing- what perception could there be?

Granted that the percipient must act through an organ and that this organ must be different from the object perceived, then the universe, as an All, can have [no sensation since it has] no organ distinct from object: it can have self-awareness, as we have; but sense-perception, the constant attendant of another order, it cannot have.

Our own apprehension of any bodily condition apart from the normal is the sense of something intruding from without: but besides this, we have the apprehension of one member by another; why then should not the All, by means of what is stationary in it, perceive that region of itself which is in movement, that is to say the earth and the earth's content?

Things of earth are certainly affected by what passes in other regions of the All; what, then, need prevent the All from having, in some appropriate way, the perception of those changes? In addition to that self-contemplating vision vested in its stationary part, may it not have a seeing power like that of an eye able to announce to the All-Soul what has passed before it? Even granted that it is entirely unaffected by its lower, why, still, should it not see like an eye, ensouled as it is, all lightsome?

Still: "eyes were not necessary to it," we read. If this meant simply that nothing is left to be seen outside of the All, still there is the inner content, and there can be nothing to prevent it seeing what constitutes itself: if the meaning is that such self-vision could serve to no use, we may think that it has vision not as a main intention for vision's sake but as a necessary concomitant of its characteristic nature; it is difficult to conceive why such a body should be incapable of seeing.

25. But the organ is not the only requisite to vision or to perception of any kind: there must be a state of the soul inclining it towards the sphere of sense.

Now it is the soul's character to be ever in the Intellectual sphere, and even though it were apt to sense-perception, this could not accompany that intention towards the highest; to ourselves when absorbed in the Intellectual, vision and the other acts of sense are in abeyance for the time; and, in general, any special attention blurs every other. The desire of apprehension from part to part- a subject examining itself- is merely curiosity even in beings of our own standing, and, unless for some definite purpose, is waste of energy: and the desire to apprehend something external- for the sake of a pleasant sight- is the sign of suffering or deficiency.

Smelling, tasting flavours [and such animal perceptions] may perhaps be described as mere accessories, distractions of the soul, while seeing and hearing would belong to the sun and the other heavenly bodies as incidentals to their being. This would not be unreasonable if seeing and hearing are means by which they apply themselves to their function.

But if they so apply themselves, they must have memory; it is impossible that they should have no remembrance if they are to be benefactors, their service could not exist without memory.

26. Their knowledge of our prayers is due to what we may call an enlinking, a determined relation of things fitted into a system; so, too, the fulfillment of the petitions; in the art of magic all looks to this enlinkment: prayer and its answer, magic and its success, depend upon the sympathy of enchained forces.

This seems to oblige us to accord sense-perception to the earth.

But what perception?

Why not, to begin with, that of contact-feeling, the apprehension of part by part, the apprehension of fire by the rest of the entire mass in a sensation transmitted upwards to the earth's leading principle? A corporeal mass [such as that of the earth] may be sluggish but is not utterly inert. Such perceptions, of course, would not be of trifles, but of the graver movement of things.

But why even of them?

Because those gravest movements could not possibly remain unknown where there is an immanent soul.

And there is nothing against the idea that sensation in the earth exists for the sake of the human interests furthered by the earth. They would be served by means of the sympathy that has been mentioned; petitioners would be heard and their prayers met, though in a way not ours. And the earth, both in its own interest and in that of beings distinct from itself, might have the experiences of the other senses also- for example, smell and taste where, perhaps, the scent of juices or sap might enter into its care for animal life, as in the constructing or restoring of their bodily part.

But we need not demand for earth the organs by which we, ourselves, act: not even all the animals have these; some, without ears perceive sound.

For sight it would not need eyes- though if light is indispensable how can it see?

That the earth contains the principle of growth must be admitted; it is difficult not to allow in consequence that, since this vegetal principle is a member of spirit, the earth is primarily of the spiritual order; and how can we doubt that in a spirit all is lucid? This becomes all the more evident when we reflect that, besides being as a spirit lightsome, it is physically illuminated moving in the light of kosmic revolution.

There is, thus, no longer any absurdity or impossibility in the notion that the soul in the earth has vision: we must, further, consider that it is the soul of no mean body; that in fact it is a god since certainly soul must be everywhere good.

27. If the earth transmits the generative soul to growing things- or retains it while allowing a vestige of it to constitute the vegetal principle in them- at once the earth is ensouled, as our flesh is, and any generative power possessed by the plant world is of its bestowing: this phase of the soul is immanent in the body of the growing thing, and transmits to it that better element by which it differs from the broken off part no longer a thing of growth but a mere lump of material.

But does the entire body of the earth similarly receive anything from the soul?

Yes: for we must recognize that earthly material broken off from the main body differs from the same remaining continuously attached; thus stones increase as long as they are embedded, and, from the moment they are separated, stop at the size attained.

We must conclude, then, that every part and member of the earth carries its vestige of this principle of growth, an under-phase of that entire principle which belongs not to this or that member but to the earth as a whole: next in order is the nature [the soul-phase], concerned with sensation, this not interfused [like the vegetal principle] but in contact from above: then the higher soul and the Intellectual-Principle, constituting together the being known as Hestia [Earth-Mind] and Demeter [Earth-Soul]- a nomenclature indicating the human intuition of these truths, asserted in the attribution of a divine name and nature.

28. Thus much established, we may return on our path: we have to discuss the seat of the passionate element in the human being.

Pleasures and pains- the conditions, that is, not the perception of them- and the nascent stage of desire, we assigned to the body as a determined thing, the body brought, in some sense, to life: are we entitled to say the same of the nascent stage of passion? Are we to consider passion in all its forms as vested in the determined body or in something belonging to it, for instance in the heart or the bile necessarily taking condition within a body not dead? Or are we to think that just as that which bestows the vestige of the soul is a distinct entity, so we may reason in this case- the passionate element being one distinct thing, itself, and not deriving from any passionate or percipient faculty?

Now in the first case the soul-principle involved, the vegetal, pervades the entire body, so that pain and pleasure and nascent desire for the satisfaction of need are present all over it- there is possibly some doubt as to the sexual impulse, which, however, it may suffice to assign to the organs by which it is executed- but in general the region about the liver may be taken to be the starting point of desire, since it is the main acting point of the vegetal principle which transmits the vestige phase of the soul to the liver and body- the seat, because the spring.

But in this other case, of passion, we have to settle what it is, what form of soul it represents: does it act by communicating a lower phase of itself to the regions round the heart, or is it set in motion by the higher soul-phase impinging upon the Conjoint [the animate-total], or is there, in such conditions no question of soul-phase, but simply passion itself producing the act or state of [for example] anger?

Evidently the first point for enquiry is what passion is.

Now we all know that we feel anger not only over our own bodily suffering, but also over the conduct of others, as when some of our associates act against our right and due, and in general over any unseemly conduct. It is at once evident that anger implies some subject capable of sensation and of judgement: and this consideration suffices to show that the vegetal nature is not its source, that we must look for its origin elsewhere.

On the other hand, anger follows closely upon bodily states; people in whom the blood and the bile are intensely active are as quick to anger as those of cool blood and no bile are slow; animals grow angry though they pay attention to no outside combinations except where they recognize physical danger; all this forces us again to place the seat of anger in the strictly corporeal element, the principle by which the animal organism is held together. Similarly, that anger or its first stirring depends upon the condition of the body follows from the consideration that the same people are more irritable ill than well, fasting than after food: it would seem that the bile and the blood, acting as vehicles of life, produce these emotions.

Our conclusion [reconciling with these corporeal facts the psychic or mental element

indicated] will identify, first, some suffering in the body answered by a movement in the blood or in the bile: sensation ensues and the soul, brought by means of the representative faculty to partake in the condition of the affected body, is directed towards the cause of the pain: the reasoning soul, in turn, from its place above the phase not inbound with body-acts in its own mode when the breach of order has become manifest to it: it calls in the alliance of that ready passionate faculty which is the natural combatant of the evil disclosed.

Thus anger has two phases; there is firstly that which, rising apart from all process of reasoning, draws reason to itself by the medium of the imaging faculty, and secondly that which, rising in reason, touches finally upon the specific principle of the emotion. Both these depend upon the existence of that principle of vegetal life and generation by which the body becomes an organism aware of pleasure and pain: this principle it was that made the body a thing of bile and bitterness, and thus it leads the indwelling soul-phase to corresponding states- churlish and angry under stress of environment- so that being wronged itself, it tries, as we may put it, to return the wrong upon its surroundings, and bring them to the same condition.

That this soul-vestige, which determines the movements of passion is of one essence [con-substantial] with the other is evident from the consideration that those of us less avid of corporeal pleasures, especially those that wholly repudiate the body, are the least prone to anger and to all experiences not rising from reason.

That this vegetal principle, underlying anger, should be present in trees and yet passion be lacking in them cannot surprise us since they are not subject to the movements of blood and bile. If the occasions of anger presented themselves where there is no power of sensation there could be no more than a physical ebullition with something approaching to resentment [an unconscious reaction]; where sensation exists there is at once something more; the recognition of wrong and of the necessary defence carries with it the intentional act.

But the division of the unreasoning phase of the soul into a desiring faculty and a passionate faculty- the first identical with the vegetal principle, the second being a lower phase of it acting upon the blood or bile or upon the entire living organism- such a division would not give us a true opposition, for the two would stand in the relation of earlier phase to derivative.

This difficulty is reasonably met by considering that both faculties are derivatives and making the division apply to them in so far as they are new productions from a common source; for the division applies to movements of desire as such, not to the essence from which they rise.

That essence is not, of its own nature, desire; it is, however, the force which by consolidating itself with the active manifestation proceeding from it makes the desire a completed thing. And that derivative which culminates in passion may not unreasonably be thought of as a vestige-phase lodged about the heart, since the heart is not the seat of the soul, but merely the centre to that portion of the blood which is concerned in the

movements of passion.

29. But- keeping to our illustration, by which the body is warmed by soul and not merely illuminated by it- how is it that when the higher soul withdraws there is no further trace of the vital principle?

For a brief space there is; and, precisely, it begins to fade away immediately upon the withdrawal of the other, as in the case of warmed objects when the fire is no longer near them: similarly hair and nails still grow on the dead; animals cut to pieces wriggle for a good time after; these are signs of a life force still indwelling.

Besides, simultaneous withdrawal would not prove the identity of the higher and lower phases: when the sun withdraws there goes with it not merely the light emanating from it, guided by it, attached to it, but also at once that light seen upon obliquely situated objects, a light secondary to the sun's and cast upon things outside of its path [reflected light showing as colour]; the two are not identical and yet they disappear together.

But is this simultaneous withdrawal or frank obliteration?

The question applies equally to this secondary light and to the corporeal life, that life which we think of as being completely sunk into body.

No light whatever remains in the objects once illuminated; that much is certain; but we have to ask whether it has sunk back into its source or is simply no longer in existence.

How could it pass out of being, a thing that once has been?

But what really was it? We must remember that what we know as colour belongs to bodies by the fact that they throw off light, yet when corruptible bodies are transformed the colour disappears and we no more ask where the colour of a burned-out fire is than where its shape is.

Still: the shape is merely a configuration, like the lie of the hands clenched or spread; the colour is no such accidental but is more like, for example, sweetness: when a material substance breaks up, the sweetness of what was sweet in it, and the fragrance of what was fragrant, may very well not be annihilated, but enter into some other substance, passing unobserved there because the new habitat is not such that the entrant qualities now offer anything solid to perception.

May we not think that, similarly, the light belonging to bodies that have been dissolved remains in being while the solid total, made up of all that is characteristic, disappears?

It might be said that the seeing is merely the sequel to some law [of our own nature], so that what we call qualities do not actually exist in the substances.

But this is to make the qualities indestructible and not dependent upon the composition of the body; it would no longer be the Reason-Principles within the sperm that produce,

for instance, the colours of a bird's variegated plumage; these principles would merely blend and place them, or if they produced them would draw also on the full store of colours in the sky, producing in the sense, mainly, of showing in the formed bodies something very different from what appears in the heavens.

But whatever we may think on this doubtful point, if, as long as the bodies remain unaltered, the light is constant and unsevered, then it would seem natural that, on the dissolution of the body, the light- both that in immediate contact and any other attached to that- should pass away at the same moment, unseen in the going as in the coming.

But in the case of the soul it is a question whether the secondary phases follow their priors- the derivatives their sources- or whether every phase is self-governing, isolated from its predecessors and able to stand alone; in a word, whether no part of the soul is sundered from the total, but all the souls are simultaneously one soul and many, and, if so, by what mode; this question, however, is treated elsewhere.

Here we have to enquire into the nature and being of that vestige of the soul actually present in the living body: if there is truly a soul, then, as a thing never cut off from its total, it will go with soul as soul must: if it is rather to be thought of as belonging to the body, as the life of the body, we have the same question that rose in the case of the vestige of light; we must examine whether life can exist without the presence of soul, except of course in the sense of soul living above and acting upon the remote object.

30. We have declared acts of memory unnecessary to the stars, but we allow them perceptions, hearing as well as seeing; for we said that prayers to them were heard- our supplications to the sun, and those, even, of certain other men to the stars. It has moreover been the belief that in answer to prayer they accomplish many human wishes, and this so lightheartedly that they become not merely helpers towards good but even accomplices in evil. Since this matter lies in our way, it must be considered, for it carries with it grave difficulties that very much trouble those who cannot think of divine beings as, thus, authors or auxiliaries in unseemliness even including the connections of loose carnality.

In view of all this it is especially necessary to study the question with which we began, that of memory in the heavenly bodies.

It is obvious that, if they act on our prayers and if this action is not immediate, but with delay and after long periods of time, they remember the prayers men address to them. This is something that our former argument did not concede; though it appeared plausible that, for their better service of mankind, they might have been endowed with such a memory as we ascribed to Demeter and Hestia- or to the latter alone if only the earth is to be thought of as beneficent to man.

We have, then, to attempt to show: firstly, how acts implying memory in the heavenly bodies are to be reconciled with our system as distinguished from those others which allow them memory as a matter of course; secondly, what vindication of those gods of the heavenly spheres is possible in the matter of seemingly anomalous acts- a question

which philosophy cannot ignore- then too, since the charge goes so far, we must ask whether credence is to be given to those who hold that the entire heavenly system can be put under spell by man's skill and audacity: our discussion will also deal with the spirit-beings and how they may be thought to minister to these ends- unless indeed the part played by the Celestials prove to be settled by the decision upon the first questions.

31. Our problem embraces all act and all experience throughout the entire kosmos- whether due to nature, in the current phrase, or effected by art. The natural proceeds, we must hold, from the All towards its members and from the members to the All, or from member to other member: the artificial either remains, as it began, within the limit of the art- attaining finality in the artificial product alone- or is the expression of an art which calls to its aid natural forces and agencies, and so sets up act and experience within the sphere of the natural.

When I speak of the act and experience of the All I mean the total effect of the entire kosmic circuit upon itself and upon its members: for by its motion it sets up certain states both within itself and upon its parts, upon the bodies that move within it and upon all that it communicates to those other parts of it, the things of our earth.

The action of part upon part is manifest; there are the relations and operations of the sun, both towards the other spheres and towards the things of earth; and again relations among elements of the sun itself, of other heavenly bodies, of earthly things and of things in the other stars, demand investigation.

As for the arts: Such as look to house building and the like are exhausted when that object is achieved; there are again those- medicine, farming, and other serviceable pursuits- which deal helpfully with natural products, seeking to bring them to natural efficiency; and there is a class- rhetoric, music and every other method of swaying mind or soul, with their power of modifying for better or for worse- and we have to ascertain what these arts come to and what kind of power lies in them.

On all these points, in so far as they bear on our present purpose, we must do what we can to work out some approximate explanation.

It is abundantly evident that the Circuit is a cause; it modifies, firstly, itself and its own content, and undoubtedly also it tells on the terrestrial, not merely in accordance with bodily conditions but also by the states of the soul it sets up; and each of its members has an operation upon the terrestrial and in general upon all the lower.

Whether there is a return action of the lower upon the higher need not trouble us now: for the moment we are to seek, as far as discussion can exhibit it, the method by which action takes place; and we do not challenge the opinions universally or very generally entertained.

We take the question back to the initial act of causation. It cannot be admitted that either heat or cold and the like what are known as the primal qualities of the elements- or any admixture of these qualities, should be the first causes we are seeking; equally

inacceptable, that while the sun's action is all by heat, there is another member of the Circuit operating wholly by cold- incongruous in the heavens and in a fiery body- nor can we think of some other star operating by liquid fire.

Such explanations do not account for the differences of things, and there are many phenomena which cannot be referred to any of these causes. Suppose we allow them to be the occasion of moral differences- determined, thus, by bodily composition and constitution under a reigning heat or cold- does that give us a reasonable explanation of envy, jealousy, acts of violence? Or, if it does, what, at any rate, are we to think of good and bad fortune, rich men and poor, gentle blood, treasure-trove?

An immensity of such examples might be adduced, all leading far from any corporeal quality that could enter the body and soul of a living thing from the elements: and it is equally impossible that the will of the stars, a doom from the All, any deliberation among them, should be held responsible for the fate of each and all of their inferiors. It is not to be thought that such beings engage themselves in human affairs in the sense of making men thieves, slave-dealers, burglars, temple-strippers, or debased effeminates practising and lending themselves to disgusting actions: that is not merely unlike gods; it is unlike mediocre men; it is, perhaps, beneath the level of any existing being where there is not the least personal advantage to be gained.

32. If we can trace neither to material agencies [blind elements] nor to any deliberate intention the influences from without which reach to us and to the other forms of life and to the terrestrial in general, what cause satisfactory to reason remains?

The secret is: firstly, that this All is one universally comprehensive living being, encircling all the living beings within it, and having a soul, one soul, which extends to all its members in the degree of participant membership held by each; secondly, that every separate thing is an integral part of this All by belonging to the total material fabric- unrestrictedly a part by bodily membership, while, in so far as it has also some participation in the All. Soul, it possesses in that degree spiritual membership as well, perfect where participation is in the All-Soul alone, partial where there is also a union with a lower soul.

But, with all this gradation, each several thing is affected by all else in virtue of the common participation in the All, and to the degree of its own participation.

This One-All, therefore, is a sympathetic total and stands as one living being; the far is near; it happens as in one animal with its separate parts: talon, horn, finger, and any other member are not continuous and yet are effectively near; intermediate parts feel nothing, but at a distant point the local experience is known. Correspondent things not side by side but separated by others placed between, the sharing of experience by dint of like condition- this is enough to ensure that the action of any distant member be transmitted to its distant fellow. Where all is a living thing summing to a unity there is nothing so remote in point of place as not to be near by virtue of a nature which makes of the one living being a sympathetic organism.

Where there is similarity between a thing affected and the thing affecting it, the affection is not alien; where the affecting cause is dissimilar the affection is alien and unpleasant.

Such hurtful action of member upon member within one living being need not seem surprising: within ourselves, in our own activities, one constituent can be harmed by another; bile and animal spirit seem to press and goad other members of the human total: in the vegetal realm one part hurts another by sucking the moisture from it. And in the All there is something analogous to bile and animal spirit, as to other such constituents. For visibly it is not merely one living organism; it is also a manifold. In virtue of the unity the individual is preserved by the All: in virtue of the multiplicity of things having various contacts, difference often brings about mutual hurt; one thing, seeking its own need, is detrimental to another; what is at once related and different is seized as food; each thing, following its own natural path, wrenches from something else what is serviceable to itself, and destroys or checks in its own interest whatever is becoming a menace to it: each, occupied with its peculiar function, assists no doubt anything able to profit by that, but harms or destroys what is too weak to withstand the onslaught of its action, like fire withering things round it or greater animals in their march thrusting aside or trampling under foot the smaller.

The rise of all these forms of being and their modification, whether to their loss or gain, all goes to the fulfillment of the natural unhindered life of that one living being: for it was not possible for the single thing to be as if it stood alone; the final purpose could not serve to that only end, intent upon the partial: the concern must be for the whole to which each item is member: things are different both from each other and in their own stages, therefore cannot be complete in one unchanging form of life; nor could anything remain utterly without modification if the All is to be durable; for the permanence of an All demands varying forms.

33. The Circuit does not go by chance but under the Reason-Principle of the living whole; therefore there must be a harmony between cause and caused; there must be some order ranging things to each other's purpose, or in due relation to each other: every several configuration within the Circuit must be accompanied by a change in the position and condition of things subordinate to it, which thus by their varied rhythmic movement make up one total dance-play.

In our dance-plays there are outside elements contributing to the total effect- fluting, singing, and other linked accessories- and each of these changes in each new movement: there is no need to dwell on these; their significance is obvious. But besides this there is the fact that the limbs of the dancer cannot possibly keep the same positions in every figure; they adapt themselves to the plan, bending as it dictates, one lowered, another raised, one active, another resting as the set pattern changes. The dancer's mind is on his own purpose; his limbs are submissive to the dance-movement which they accomplish to the end, so that the connoisseur can explain that this or that figure is the motive for the lifting, bending, concealment, effacing, of the various members of the body; and in all this the executant does not choose the particular motions for their own sake; the whole play of the entire person dictates the necessary position to each limb and member as it serves to the plan.

Now this is the mode in which the heavenly beings [the diviner members of the All] must be held to be causes wherever they have any action, and, when. they do not act, to indicate.

Or, a better statement: the entire kosmos puts its entire life into act, moving its major members with its own action and unceasingly setting them in new positions; by the relations thus established, of these members to each other and to the whole, and by the different figures they make together, the minor members in turn are brought under the system as in the movements of some one living being, so that they vary according to the relations, positions, configurations: the beings thus co-ordinated are not the causes; the cause is the coordinating All; at the same time it is not to be thought of as seeking to do one thing and actually doing another, for there is nothing external to it since it is the cause by actually being all: on the one side the configurations, on the other the inevitable effects of those configurations upon a living being moving as a unit and, again, upon a living being [an All] thus by its nature conjoined and concomitant and, of necessity, at once subject and object to its own activities.

34. For ourselves, while whatever in us belongs to the body of the All should be yielded to its action, we ought to make sure that we submit only within limits, realizing that the entire man is not thus bound to it: intelligent servitors yield a part of themselves to their masters but in part retain their personality, and are thus less absolutely at beck and call, as not being slaves, not utterly chattels.

The changing configurations within the All could not fail to be produced as they are, since the moving bodies are not of equal speed.

Now the movement is guided by a Reason-Principle; the relations of the living whole are altered in consequence; here in our own realm all that happens reacts in sympathy to the events of that higher sphere: it becomes, therefore, advisable to ask whether we are to think of this realm as following upon the higher by agreement, or to attribute to the configurations the powers underlying the events, and whether such powers would be vested in the configurations simply or in the relations of the particular items.

It will be said that one position of one given thing has by no means an identical effect-whether of indication or of causation- in its relation to another and still less to any group of others, since each several being seems to have a natural tendency [or receptivity] of its own.

The truth is that the configuration of any given group means merely the relationship of the several parts, and, changing the members, the relationship remains the same.

But, this being so, the power will belong, not to the positions but to the beings holding those positions?

To both taken together. For as things change their relations, and as any one thing changes place, there is a change of power.

But what power? That of causation or of indication?

To this double thing- the particular configuration of particular beings- there accrues often the twofold power, that of causation and that of indication, but sometimes only that of indication. Thus we are obliged to attribute powers both to the configuration and to the beings entering into them. In mime dancers each of the hands has its own power, and so with all the limbs; the relative positions have much power; and, for a third power, there is that of the accessories and concomitants; underlying the action of the performers' limbs, there are such items as the clutched fingers and the muscles and veins following suit.

35. But we must give some explanation of these powers. The matter requires a more definite handling. How can there be a difference of power between one triangular configuration and another?

How can there be the exercise of power from man to man; under what law, and within what limits?

The difficulty is that we are unable to attribute causation either to the bodies of the heavenly beings or to their wills: their bodies are excluded because the product transcends the causative power of body, their will because it would be unseemly to suppose divine beings to produce unseemliness.

Let us keep in mind what we have laid down:

The being we are considering is a living unity and, therefore, necessarily self-sympathetic: it is under a law of reason, and therefore the unfolding process of its life must be self-accordant: that life has no haphazard, but knows only harmony and ordinance: all the groupings follow reason: all single beings within it, all the members of this living whole in their choral dance are under a rule of Number.

Holding this in mind we are forced to certain conclusions: in the expressive act of the All are comprised equally the configurations of its members and these members themselves, minor as well as major entering into the configurations. This is the mode of life of the All; and its powers work together to this end under the Nature in which the producing agency within the Reason-Principles has brought them into being. The groupings [within the All] are themselves in the nature of Reason-Principles since they are the out-spacing of a living-being, its reason-determined rhythms and conditions, and the entities thus spaced-out and grouped to pattern are its various members: then again there are the powers of the living being- distinct these, too- which may be considered as parts of it, always excluding deliberate will which is external to it, not contributory to the nature of the living All.

The will of any organic thing is one; but the distinct powers which go to constitute it are far from being one: yet all the several wills look to the object aimed at by the one will of the whole: for the desire which the one member entertains for another is a desire within

the All: a part seeks to acquire something outside itself, but that external is another part of which it feels the need: the anger of a moment of annoyance is directed to something alien, growth draws on something outside, all birth and becoming has to do with the external; but all this external is inevitably something included among fellow members of the system: through these its limbs and members, the All is bringing this activity into being while in itself it seeks- or better, contemplates- The Good. Right will, then, the will which stands above accidental experience, seeks The Good and thus acts to the same end with it. When men serve another, many of their acts are done under order, but the good servant is the one whose purpose is in union with his master's.

In all the efficacy of the sun and other stars upon earthly matters we can but believe that though the heavenly body is intent upon the Supreme yet- to keep to the sun- its warming of terrestrial things, and every service following upon that, all springs from itself, its own act transmitted in virtue of soul, the vastly efficacious soul of Nature. Each of the heavenly bodies, similarly, gives forth a power, involuntary, by its mere radiation: all things become one entity, grouped by this diffusion of power, and so bring about wide changes of condition; thus the very groupings have power since their diversity produces diverse conditions; that the grouped beings themselves have also their efficiency is clear since they produce differently according to the different membership of the groups.

That configuration has power in itself is within our own observation here. Why else do certain groupments, in contradistinction to others, terrify at sight though there has been no previous experience of evil from them? If some men are alarmed by a particular groupment and others by quite a different one, the reason can be only that the configurations themselves have efficacy, each upon a certain type- an efficacy which cannot fail to reach anything naturally disposed to be impressed by it, so that in one groupment things attract observation which in another pass without effect.

If we are told that beauty is the motive of attraction, does not this mean simply that the power of appeal to this or that mind depends upon pattern, configuration? How can we allow power to colour and none to configuration? It is surely untenable that an entity should have existence and yet have no power to effect: existence carries with it either acting or answering to action, some beings having action alone, others both.

At the same time there are powers apart from pattern: and, in things of our realm, there are many powers dependent not upon heat and cold but upon forces due to differing properties, forces which have been shaped to ideal-quality by the action of Reason-Principles and communicate in the power of Nature: thus the natural properties of stones and the efficacy of plants produce many astonishing results.

36. The Universe is immensely varied, the container of all the Reason-Principles and of infinite and diverse efficacies. In man, we are told, the eye has its power, and the bones have their varied powers, and so with each separate part of hand and of foot; and there is no member or organ without its own definite function, some separate power of its own- a diversity of which we can have no notion unless our studies take that direction. What is true of man must be true of the universe, and much more, since all this order is

but a representation of the higher: it must contain an untellably wonderful variety of powers, with which, of course, the bodies moving through the heavens will be most richly endowed.

We cannot think of the universe as a soulless habitation, however vast and varied, a thing of materials easily told off, kind by kind- wood and stone and whatever else there be, all blending into a kosmos: it must be alert throughout, every member living by its own life, nothing that can have existence failing to exist within it.

And here we have the solution of the problem, "How an ensouled living form can include the soulless": for this account allows grades of living within the whole, grades to some of which we deny life only because they are not perceptibly self-moved: in the truth, all of these have a hidden life; and the thing whose life is patent to sense is made up of things which do not live to sense, but, none the less, confer upon their resultant total wonderful powers towards living. Man would never have reached to his actual height if the powers by which he acts were the completely soulless elements of his being; similarly the All could not have its huge life unless its every member had a life of its own; this however does not necessarily imply a deliberate intention; the All has no need of intention to bring about its acts: it is older than intention, and therefore its powers have many servitors.

37. We must not rob the universe of any factor in its being. If any of our theorists of to-day seek to explain the action of fire- or of any other such form, thought of as an agent- they will find themselves in difficulties unless they recognize the act to be the object's function in the All, and give a like explanation of other natural forces in common use.

We do not habitually examine or in any way question the normal: we set to doubting and working out identifications when we are confronted by any display of power outside everyday experience: we wonder at a novelty and we wonder at the customary when anyone brings forward some single object and explains to our ignorance the efficacy vested in it.

Some such power, not necessarily accompanied by reason, every single item possesses; for each has been brought into being and into shape within a universe; each in its kind has partaken of soul through the medium of the ensouled All, as being embraced by that definitely constituted thing: each then is a member of an animate being which can include nothing that is less than a full member [and therefore a sharer in the total of power]- though one thing is of mightier efficacy than another, and, especially members of the heavenly system than the objects of earth, since they draw upon a purer nature- and these powers are widely productive. But productivity does not comport intention in what appears to be the source of the thing accomplished: there is efficacy, too, where there is no will: even attention is not necessary to the communication of power; the very transmission of soul may proceed without either.

A living being, we know, may spring from another without any intention, and as without loss so without consciousness in the begetter: in fact any intention the animal exercised

could be a cause of propagation only on condition of being identical with the animal [i.e., the theory would make intention a propagative animal, not a mental act?]

And, if intention is unnecessary to the propagation of life, much more so is attention.

38. Whatever springs automatically from the All out of that distinctive life of its own, and, in addition to that self-moving activity, whatever is due to some specific agency- for example, to prayers, simple or taking the form of magic incantations- this entire range of production is to be referred, not to each such single cause, but to the nature of the thing produced [i.e., to a certain natural tendency in the product to exist with its own quality].

All that forwards life or some other useful purpose is to be ascribed to the transmission characteristic of the All; it is something flowing from the major of an integral to its minor. Where we think we see the transmission of some force unfavourable to the production of living beings, the flaw must be found in the inability of the subject to take in what would serve it: for what happens does not happen upon a void; there is always specific form and quality; anything that could be affected must have an underlying nature definite and characterized. The inevitable blendings, further, have their constructive effect, every element adding something contributory to the life. Then again some influence may come into play at the time when the forces of a beneficent nature are not acting: the co-ordination of the entire system of things does not always allow to each several entity everything that it needs: and further we ourselves add a great deal to what is transmitted to us.

None the less all entwines into a unity: and there is something wonderful in the agreement holding among these various things of varied source, even of sources frankly opposite; the secret lies in a variety within a unity. When by the standard of the better kind among things of process anything falls short- the reluctance of its material substratum having prevented its perfect shaping under idea- it may be thought of as being deficient in that noble element whose absence brings to shame: the thing is a blend, something due to the high beings, an alloy from the underlying nature, something added by the self.

Because all is ever being knit, all brought to culmination in unity, therefore all events are indicated; but this does not make virtue a matter of compulsion; its spontaneity is equally inwoven into the ordered system by the general law that the things of this sphere are pendant from the higher, that the content of our universe lies in the hands of the diviner beings in whom our world is participant.

39. We cannot, then, refer all that exists to Reason-Principles inherent in the seed of things [Spermatic Reasons]; the universe is to be traced further back, to the more primal forces, to the principles by which that seed itself takes shape. Such spermatic principles cannot be the containers of things which arise independently of them, such as what enters from Matter [the reasonless] into membership of the All, or what is due to the mere interaction of existences.

No: the Reason-Principle of the universe would be better envisaged as a wisdom

uttering order and law to a state, in full knowledge of what the citizens will do and why, and in perfect adaptation of law to custom; thus the code is made to thread its way in and out through all their conditions and actions with the honour or infamy earned by their conduct; and all coalesces by a kind of automatism.

The signification which exists is not a first intention; it arises incidentally by the fact that in a given collocation the members will tell something of each other: all is unity sprung of unity and therefore one thing is known by way of another other, a cause in the light of the caused, the sequent as rising from its precedent, the compound from the constituents which must make themselves known in the linked total.

If all this is sound, at once our doubts fall and we need no longer ask whether the transmission of any evil is due to the gods.

For, in sum: Firstly, intentions are not to be considered as the operative causes; necessities inherent in the nature of things account for all that comes from the other realm; it is a matter of the inevitable relation of parts, and, besides, all is the sequence to the living existence of a unity. Secondly, there is the large contribution made by the individual. Thirdly, each several communication, good in itself, takes another quality in the resultant combination. Fourthly, the life in the kosmos does not look to the individual but to the whole. Finally, there is Matter, the underlie, which being given one thing receives it as something else, and is unable to make the best of what it takes.

40. But magic spells; how can their efficacy be explained?

By the reigning sympathy and by the fact in Nature that there is an agreement of like forces and an opposition of unlike, and by the diversity of those multitudinous powers which converge in the one living universe.

There is much drawing and spell-binding dependent on no interfering machination; the true magic is internal to the All, its attractions and, not less, its repulsions. Here is the primal mage and sorcerer- discovered by men who thenceforth turn those same ensorcellations and magic arts upon one another.

Love is given in Nature; the qualities inducing love induce mutual approach: hence there has arisen an art of magic love-drawing whose practitioners, by the force of contact implant in others a new temperament, one favouring union as being informed with love; they knit soul to soul as they might train two separate trees towards each other. The magician too draws on these patterns of power, and by ranging himself also into the pattern is able tranquilly to possess himself of these forces with whose nature and purpose he has become identified. Supposing the mage to stand outside the All, his evocations and invocations would no longer avail to draw up or to call down; but as things are he operates from no outside standground, he pulls knowing the pull of everything towards any other thing in the living system.

The tune of an incantation, a significant cry, the mien of the operator, these too have a natural leading power over the soul upon which they are directed, drawing it with the

force of mournful patterns or tragic sounds- for it is the reasonless soul, not the will or wisdom, that is beguiled by music, a form of sorcery which raises no question, whose enchantment, indeed, is welcomed, exacted, from the performers. Similarly with regard to prayers; there is no question of a will that grants; the powers that answer to incantations do not act by will; a human being fascinated by a snake has neither perception nor sensation of what is happening; he knows only after he has been caught, and his highest mind is never caught. In other words, some influence falls from the being addressed upon the petitioner- or upon someone else- but that being itself, sun or star, perceives nothing of it all.

41. The prayer is answered by the mere fact that part and other part are wrought to one tone like a musical string which, plucked at one end, vibrates at the other also. Often, too, the sounding of one string awakens what might pass for a perception in another, the result of their being in harmony and tuned to one musical scale; now, if the vibration in a lyre affects another by virtue of the sympathy existing between them, then certainly in the All- even though it is constituted in contraries- there must be one melodic system; for it contains its unisons as well, and its entire content, even to those contraries, is a kinship.

Thus, too, whatever is hurtful to man- the passionate spirit, for example, drawn by the medium of the gall into the principle seated in the liver- comes with no intention of hurt; it is simply as one transferring fire to another might innocently burn him: no doubt, since he actually set the other on fire he is a cause, but only as the attacking fire itself is a cause, that is by the merely accidental fact that the person to whom the fire was being brought blundered in taking it.

42. It follows that, for the purposes which have induced this discussion, the stars have no need of memory or of any sense of petitions addressed to them; they give no such voluntary attention to prayers as some have thought: it is sufficient that, in virtue simply of the nature of parts and of parts within a whole, something proceeds from them whether in answer to prayer or without prayer. We have the analogy of many powers- as in some one living organism- which, independently of plan or as the result of applied method, act without any collaboration of the will: one member or function is helped or hurt by another in the mere play of natural forces; and the art of doctor or magic healer will compel some one centre to purvey something of its own power to another centre. just so the All: it purveys spontaneously, but it purveys also under spell; some entity [acting like the healer] is concerned for a member situated within itself and summons the All which, then, pours in its gift; it gives to its own part by the natural law we have cited since the petitioner is no alien to it. Even though the suppliant be a sinner, the answering need not shock us; sinners draw from the brooks; and the giver does not know of the gift but simply gives- though we must remember that all is one woof and the giving is always consonant with the order of the universe. There is, therefore, no necessity by ineluctable law that one who has helped himself to what lies open to all should receive his deserts then and there.

In sum, we must hold that the All cannot be affected; its leading principle remains for ever immune whatsoever happens to its members; the affection is really present to

them, but since nothing existent can be at strife with the total of existence, no such affection conflicts with its impassivity.

Thus the stars, in so far as they are parts, can be affected and yet are immune on various counts; their will, like that of the All, is untouched, just as their bodies and their characteristic natures are beyond all reach of harm; if they give by means of their souls, their souls lose nothing; their bodies remain unchanged or, if there is ebb or inflow, it is of something going unfelt and coming unawares.

43. And the Proficient [the Sage], how does he stand with regard to magic and philtre-spells?

In the soul he is immune from magic; his reasoning part cannot be touched by it, he cannot be perverted. But there is in him the unreasoning element which comes from the [material] All, and in this he can be affected, or rather this can be affected in him. Philtre-Love, however, he will not know, for that would require the consent of the higher soul to the trouble stifled in the lower. And, just as the unreasoning element responds to the call of incantation, so the adept himself will dissolve those horrible powers by counter-incantations. Death, disease, any experience within the material sphere, these may result, yes; for anything that has membership in the All may be affected by another member, or by the universe of members; but the essential man is beyond harm.

That the effects of magic should be not instantaneous but developed is only in accord with Nature's way.

Even the Celestials, the Daimones, are not on their unreasoning side immune: there is nothing against ascribing acts of memory and experiences of sense to them, in supposing them to accept the traction of methods laid up in the natural order, and to give hearing to petitioners; this is especially true of those of them that are closest to this sphere, and in the degree of their concern about it.

For everything that looks to another is under spell to that: what we look to, draws us magically. Only the self-intent go free of magic. Hence every action has magic as its source, and the entire life of the practical man is a bewitchment: we move to that only which has wrought a fascination upon us. This is indicated where we read "for the burgher of greathearted Erechtheus has a pleasant face [but you should see him naked; then you would be cautious]." For what conceivably turns a man to the external? He is drawn, drawn by the arts not of magicians but of the natural order which administers the deceiving draught and links this to that, not in local contact but in the fellowship of the philtre.

44. Contemplation alone stands untouched by magic; no man self-gathered falls to a spell; for he is one, and that unity is all he perceives, so that his reason is not beguiled but holds the due course, fashioning its own career and accomplishing its task.

In the other way of life, it is not the essential man that gives the impulse; it is not the reason; the unreasoning also acts as a principle, and this is the first condition of the

misfortune. Caring for children, planning marriage- everything that works as bait, taking value by dint of desire- these all tug obviously: so it is with our action, sometimes stirred, not reasonably, by a certain spirited temperament, sometimes as foolishly by greed; political interests, the siege of office, all betray a forth-summoning lust of power; action for security springs from fear; action for gain, from desire; action undertaken for the sake of sheer necessities- that is, for supplying the insufficiency of nature- indicates, manifestly, the cajoling force of nature to the safeguarding of life.

We may be told that no such magic underlies good action, since, at that, Contemplation itself, certainly a good action, implies a magic attraction.

The answer is that there is no magic when actions recognized as good are performed upon sheer necessity with the recollection that the veritable good is elsewhere; this is simply knowledge of need; it is not a bewitchment binding the life to this sphere or to any thing alien; all is permissible under duress of human nature, and in the spirit of adaptation to the needs of existence in general- or even to the needs of the individual existence, since it certainly seems reasonable to fit oneself into life rather than to withdraw from it.

When, on the contrary, the agent falls in love with what is good in those actions, and, cheated by the mere track and trace of the Authentic Good makes them his own, then, in his pursuit of a lower good, he is the victim of magic. For all dalliance with what wears the mask of the authentic, all attraction towards that mere semblance, tells of a mind misled by the spell of forces pulling towards unreality.

The sorcery of Nature is at work in this; to pursue the non-good as a good, drawn in unreasoning impulse by its specious appearance: it is to be led unknowing down paths unchosen; and what can we call that but magic.

Alone in immunity from magic is he who, though drawn by the alien parts of his total being, withholds his assent to their standards of worth, recognizing the good only where his authentic self sees and knows it, neither drawn nor pursuing, but tranquilly possessing and so never charmed away.

45. From this discussion it becomes perfectly clear that the individual member of the All contributes to that All in the degree of its kind and condition; thus it acts and is acted upon. In any particular animal each of the limbs and organs, in the measure of its kind and purpose, aids the entire being by service performed and counts in rank and utility: it gives what is in it its gift and takes from its fellows in the degree of receptive power belonging to its kind; there is something like a common sensitiveness linking the parts, and in the orders in which each of the parts is also animate, each will have, in addition to its rank as part, the very particular functions of a living being.

We have learned, further, something of our human standing; we know that we too accomplish within the All a work not confined to the activity and receptivity of body in relation to body; we know that we bring to it that higher nature of ours, linked as we are by affinities within us towards the answering affinities outside us; becoming by our soul

and the conditions of our kind thus linked- or, better, being linked by Nature- with our next highest in the celestial or demonic realm, and thence onwards with those above the Celestials, we cannot fail to manifest our quality. Still, we are not all able to offer the same gifts or to accept identically: if we do not possess good, we cannot bestow it; nor can we ever purvey any good thing to one that has no power of receiving good. Anyone that adds his evil to the total of things is known for what he is and, in accordance with his kind, is pressed down into the evil which he has made his own, and hence, upon death, goes to whatever region fits his quality- and all this happens under the pull of natural forces.

For the good man, the giving and the taking and the changes of state go quite the other way; the particular tendencies of the nature, we may put it, transpose the cords [so that we are moved by that only which, in Plato's metaphor of the puppets, draws towards the best].

Thus this universe of ours is a wonder of power and wisdom, everything by a noiseless road coming to pass according to a law which none may elude- which the base man never conceives though it is leading him, all unknowingly, to that place in the All where his lot must be cast- which the just man knows, and, knowing, sets out to the place he must, understanding, even as he begins the journey, where he is to be housed at the end, and having the good hope that he will be with gods.

In a living being of small scope the parts vary but slightly, and have but a faint individual consciousness, and, unless possibly in a few and for a short time, are not themselves alive. But in a living universe, of high expanse, where every entity has vast scope and many of the members have life, there must be wider movement and greater changes. We see the sun and the moon and the other stars shifting place and course in an ordered progression. It is therefore within reason that the souls, also, of the All should have their changes, not retaining unbrokenly the same quality, but ranged in some analogy with their action and experience- some taking rank as head and some as foot in a disposition consonant with the Universal Being which has its degrees in better and less good. A soul, which neither chooses the highest that is here, nor has lent itself to the lowest, is one which has abandoned another, a purer, place, taking this sphere in free election.

The punishments of wrong-doing are like the treatment of diseased parts of the body- here, medicines to knit sundered flesh; there, amputations; elsewhere, change of environment and condition- and the penalties are planned to bring health to the All by settling every member in the fitting place: and this health of the All requires that one man be made over anew and another, sick here, be taken hence to where he shall be weakly no longer.

FIFTH TRACTATE.

PROBLEMS OF THE SOUL (3).

[ALSO ENTITLED "ON SIGHT"].

1. We undertook to discuss the question whether sight is possible in the absence of any intervening medium, such as air or some other form of what is known as transparent body: this is the time and place.

It has been explained that seeing and all sense-perception can occur only through the medium of some bodily substance, since in the absence of body the soul is utterly absorbed in the Intellectual Sphere. Sense-perception being the gripping not of the Intellectual but of the sensible alone, the soul, if it is to form any relationship of knowledge, or of impression, with objects of sense, must be brought in some kind of contact with them by means of whatever may bridge the gap.

The knowledge, then, is realized by means of bodily organs: through these, which [in the embodied soul] are almost of one growth with it, being at least its continuations, it comes into something like unity with the alien, since this mutual approach brings about a certain degree of identity [which is the basis of knowledge].

Admitting, then, that some contact with an object is necessary for knowing it, the question of a medium falls to the ground in the case of things identified by any form of touch; but in the case of sight- we leave hearing over for the present- we are still in doubt; is there need of some bodily substance between the eye and the illumined object?

No: such an intervening material may be a favouring circumstance, but essentially it adds nothing to seeing power. ! Dense bodies, such as clay, actually prevent sight; the less material the intervening substance is, the more clearly we see; the intervening substance, then, is a hindrance, or, if not that, at least not a help.

It will be objected that vision implies that whatever intervenes between seen and seer must first [and progressively] experience the object and be, as it were, shaped to it; we will be reminded that [vision is not a direct and single relation between agent and object, but is the perception of something radiated since] anyone facing to the object from the side opposite to ourselves sees it equally; we will be asked to deduce that if all the space intervening between seen and seer did not carry the impression of the object we could not receive it.

But all the need is met when the impression reaches that which is adapted to receive it; there is no need for the intervening space to be impressed. If it is, the impression will be of quite another order: the rod between the fisher's hand and the torpedo fish is not affected in the same way as the hand that feels the shock. And yet there too, if rod and line did not intervene, the hand would not be affected- though even that may be questioned, since after all the fisherman, we are told, is numbed if the torpedo merely lies in his net.

The whole matter seems to bring us back to that sympathy of which we have treated. If a certain thing is of a nature to be sympathetically affected by another in virtue of some similitude between them, then anything intervening, not sharing in that similitude, will

not be affected, or at least not similarly. If this be so, anything naturally disposed to be affected will take the impression more vividly in the absence of intervening substance, even of some substance capable, itself, of being affected.

2. If sight depends upon the linking of the light of vision with the light leading progressively to the illumined object, then, by the very hypothesis, one intervening substance, the light, is indispensable: but if the illuminated body, which is the object of vision, serves as an agent operating certain changes, some such change might very well impinge immediately upon the eye, requiring no medium; this all the more, since as things are the intervening substance, which actually does exist, is in some degree changed at the point of contact with the eye [and so cannot be in itself a requisite to vision].

Those who have made vision a forth-going act [and not an in-coming from the object] need not postulate an intervening substance- unless, indeed, to provide against the ray from the eye failing on its path- but this is a ray of light and light flies straight. Those who make vision depend upon resistance are obliged to postulate an intervening substance.

The champions of the image, with its transit through a void, are seeking the way of least resistance; but since the entire absence of intervenient gives a still easier path they will not oppose that hypothesis.

So, too, those that explain vision by sympathy must recognize that an intervening substance will be a hindrance as tending to check or block or enfeeble that sympathy; this theory, especially, requires the admission that any intervenient, and particularly one of kindred nature, must blunt the perception by itself absorbing part of the activity. Apply fire to a body continuous through and through, and no doubt the core will be less affected than the surface: but where we are dealing with the sympathetic parts of one living being, there will scarcely be less sensation because of the intervening substance, or, if there should be, the degree of sensation will still be proportionate to the nature of the separate part, with the intervenient acting merely as a certain limitation; this, though, will not be the case where the element introduced is of a kind to overleap the bridge.

But this is saying that the sympathetic quality of the universe depends upon its being one living thing, and that our amenability to experience depends upon our belonging integrally to that unity; would it not follow that continuity is a condition of any perception of a remote object?

The explanation is that continuity and its concomitant, the bridging substance, come into play because a living being must be a continuous thing, but that, none the less, the receiving of impression is not an essentially necessary result of continuity; if it were, everything would receive such impression from everything else, and if thing is affected by thing in various separate orders, there can be no further question of any universal need of intervening substance.

Why it should be especially requisite in the act of seeing would have to be explained: in

general, an object passing through the air does not affect it beyond dividing it; when a stone falls, the air simply yields; nor is it reasonable to explain the natural direction of movement by resistance; to do so would bring us to the absurdity that resistance accounts for the upward movement of fire, which on the contrary, overcomes the resistance of the air by its own essentially quick energy. If we are told that the resistance is brought more swiftly into play by the very swiftness of the ascending body, that would be a mere accidental circumstance, not a cause of the upward motion: in trees the upthrust from the root depends on no such external propulsion; we, too, in our movements cleave the air and are in no wise forwarded by its resistance; it simply flows in from behind to fill the void we make.

If the severance of the air by such bodies leaves it unaffected, why must there be any severance before the images of sight can reach us?

And, further, once we reject the theory that these images reach us by way of some outstreaming from the objects seen, there is no reason to think of the air being affected and passing on to us, in a progression of impression, what has been impressed upon itself.

If our perception is to depend upon previous impressions made upon the air, then we have no direct knowledge of the object of vision, but know it only as through an intermediary, in the same way as we are aware of warmth where it is not the distant fire itself that warms us, but the warmed intervening air. That is a matter of contact; but sight is not produced by contact: the application of an object to the eye would not produce sight; what is required is the illumination of the intervening medium; for the air in itself is a dark substance: If it were not for this dark substance there would probably be no reason for the existence of light: the dark intervening matter is a barrier, and vision requires that it be overcome by light. Perhaps also the reason why an object brought close to the eye cannot be seen is that it confronts us with a double obscuration, its own and that of the air.

3. For the most convincing proof that vision does not depend upon the transmission of impressions of any kind made upon the air, we have only to consider that in the darkness of night we can see a fire and the stars and their very shapes.

No one will pretend that these forms are reproduced upon the darkness and come to us in linked progression; if the fire thus rayed out its own form, there would be an end to the darkness. In the blackest night, when the very stars are hidden and show no gleam of their light, we can see the fire of the beacon-stations and of maritime signal-towers.

Now if, in defiance of all that the senses tell us, we are to believe that in these examples the fire [as light] traverses the air, then, in so far as anything is visible, it must be that dimmed reproduction in the air, not the fire itself. But if an object can be seen on the other side of some intervening darkness, much more would it be visible with nothing intervening.

We may hold one thing certain: the impossibility of vision without an intervening

substance does not depend upon that absence in itself: the sole reason is that, with the absence, there would be an end to the sympathy reigning in the living whole and relating the parts to each other in an existent unity.

Perception of every kind seems to depend on the fact that our universe is a whole sympathetic to itself: that it is so, appears from the universal participation in power from member to member, and especially in remote power.

No doubt it would be worth enquiry- though we pass it for the present- what would take place if there were another kosmos, another living whole having no contact with this one, and the far ridges of our heavens had sight: would our sphere see that other as from a mutually present distance, or could there be no dealing at all from this to that?

To return; there is a further consideration showing that sight is not brought about by this alleged modification of the intervenient.

Any modification of the air substance would necessarily be corporeal: there must be such an impression as is made upon sealing wax. But this would require that each part of the object of vision be impressed on some corresponding portion of the intervenient: the intervenient, however, in actual contact with the eye would be just that portion whose dimensions the pupil is capable of receiving. But as a matter of fact the entire object appears before the pupil; and it is seen entire by all within that air space for a great extent, in front, sideways, close at hand, from the back, as long as the line of vision is not blocked. This shows that any given portion of the air contains the object of vision, in face view so to speak, and, at once, we are confronted by no merely corporeal phenomena; the facts are explicable only as depending upon the greater laws, the spiritual, of a living being one and self-sensitive.

4. But there is the question of the linked light that must relate the visual organ to its object.

Now, firstly: since the intervening air is not necessary- unless in the purely accidental sense that air may be necessary to light- the light that acts as intermediate in vision will be unmodified: vision depends upon no modification whatever. This one intermediate, light, would seem to be necessary, but, unless light is corporeal, no intervening body is requisite: and we must remember that intervenient and borrowed light is essential not to seeing in general but to distant vision; the question whether light absolutely requires the presence of air we will discuss later. For the present one matter must occupy us:

If, in the act of vision, that linked light becomes ensouled, if the soul or mind permeates it and enters into union with it, as it does in its more inward acts such as understanding- which is what vision really is- then the intervening light is not a necessity: the process of seeing will be like that of touch; the visual faculty of the soul will perceive by the fact of having entered into the light; all that intervenes remains unaffected, serving simply as the field over which the vision ranges.

This brings up the question whether the sight is made active over its field by the sheer

presence of a distance spread before it, or by the presence of a body of some kind within that distance.

If by the presence of such a body, then there will be vision though there be no intervenient; if the intervenient is the sole attractive agent, then we are forced to think of the visible object as being a Kind utterly without energy, performing no act. But so inactive a body cannot be: touch tells us that, for it does not merely announce that something is by and is touched: it is acted upon by the object so that it reports distinguishing qualities in it, qualities so effective that even at a distance touch itself would register them but for the accidental that it demands proximity.

We catch the heat of a fire just as soon as the intervening air does; no need to wait for it to be warmed: the denser body, in fact, takes in more warmth than the air has to give; in other words, the air transmits the heat but is not the source of our warmth.

When on the one side, that of the object, there is the power in any degree of an outgoing act, and on the other, that of the sight, the capability of being acted upon, surely the object needs no medium through which to be effective upon what it is fully equipped to affect: this would be needing not a help but a hindrance.

Or, again, consider the Dawn: there is no need that the light first flood the air and then come to us; the event is simultaneous to both: often, in fact, we see [in the distance] when the light is not as yet round our eyes at all but very far off, before, that is, the air has been acted upon: here we have vision without any modified intervenient, vision before the organ has received the light with which it is to be linked.

It is difficult to reconcile with this theory the fact of seeing stars or any fire by night.

If [as by the theory of an intervenient] the percipient mind or soul remains within itself and needs the light only as one might need a stick in the hand to touch something at a distance, then the perception will be a sort of tussle: the light must be conceived as something thrusting, something aimed at a mark, and similarly, the object, considered as an illuminated thing, must be conceived to be resistant; for this is the normal process in the case of contact by the agency of an intervenient.

Besides, even on this explanation, the mind must have previously been in contact with the object in the entire absence of intervenient; only if that has happened could contact through an intervenient bring knowledge, a knowledge by way of memory, and, even more emphatically, by way of reasoned comparison [ending in identification]: but this process of memory and comparison is excluded by the theory of first knowledge through the agency of a medium.

Finally, we may be told that the impinging light is modified by the thing to be seen and so becomes able to present something perceptible before the visual organ; but this simply brings us back to the theory of an intervenient changed midway by the object, an explanation whose difficulties we have already indicated.

5. But some doubt arises when we consider the phenomena of hearing.

Perhaps we are to understand the process thus: the air is modified by the first movement; layer by layer it is successively acted upon by the object causing the sound: it finally impinges in that modified form upon the sense, the entire progression being governed by the fact that all the air from starting point to hearing point is similarly affected.

Perhaps, on the other hand, the intervenient is modified only by the accident of its midway position, so that, failing any intervenient, whatsoever sound two bodies in clash might make would impinge without medium upon our sense?

Still air is necessary; there could be no sound in the absence of the air set vibrating in the first movement, however different be the case with the intervenient from that onwards to the perception point.

The air would thus appear to be the dominant in the production of sound: two bodies would clash without even an incipient sound, but that the air, struck in their rapid meeting and hurled outward, passes on the movement successively till it reaches the ears and the sense of hearing.

But if the determinant is the air, and the impression is simply of air-movements, what accounts for the differences among voices and other sounds? The sound of bronze against bronze is different from that of bronze against some other substance: and so on; the air and its vibration remain the one thing, yet the difference in sounds is much more than a matter of greater or less intensity.

If we decide that sound is caused by a percussion upon the air, then obviously nothing turning upon the distinctive nature of air is in question: it sounds at a moment in which it is simply a solid body, until [by its distinctive character] it is sent pulsing outwards: thus air in itself is not essential to the production of sound; all is done by clashing solids as they meet and that percussion, reaching the sense, is the sound. This is shown also by the sounds formed within living beings not in air but by the friction of parts; for example, the grinding of teeth and the crunching of bones against each other in the bending of the body, cases in which the air does not intervene.

But all this may now be left over; we are brought to the same conclusion as in the case of sight; the phenomena of hearing arise similarly in a certain co-sensitiveness inherent in a living whole.

6. We return, then, to the question whether there could be light if there were no air, the sun illuminating corporeal surfaces across an intermediate void which, as things are, takes the light accidentally by the mere fact of being in the path. Supposing air to be the cause of the rest of things being thus affected, the substantial existence of light is due to the air; light becomes a modification of the air, and of course if the thing to be modified did not exist neither could be modification.

The fact is that primarily light is no appanage of air, and does not depend upon the existence of air: it belongs to every fiery and shining body, it constitutes even the gleaming surface of certain stones.

Now if, thus, it enters into other substances from something gleaming, could it exist in the absence of its container?

There is a distinction to be made: if it is a quality, some quality of some substance, then light, equally with other qualities, will need a body in which to lodge: if, on the contrary, it is an activity rising from something else, we can surely conceive it existing, though there be no neighbouring body but, if that is possible, a blank void which it will overleap and so appear on the further side: it is powerful, and may very well pass over unhelped. If it were of a nature to fall, nothing would keep it up, certainly not the air or anything that takes its light; there is no reason why they should draw the light from its source and speed it onwards.

Light is not an accidental to something else, requiring therefore to be lodged in a base; nor is it a modification, demanding a base in which the modification occurs: if this were so, it would vanish when the object or substance disappeared; but it does not; it strikes onward; so, too [requiring neither air nor object] it would always have its movement.

But movement, where?

Is space, pure and simple, all that is necessary?

With unchecked motion of the light outward, the material sun will be losing its energy, for the light is its expression.

Perhaps; and [from this untenable consequence] we may gather that the light never was an appanage of anything, but is the expressive Act proceeding from a base [the sun] but not seeking to enter into a base, though having some operation upon any base that may be present.

Life is also an Act, the Act of the soul, and it remains so when anything- the human body, for instance- comes in its path to be affected by it; and it is equally an Act though there be nothing for it to modify: surely this may be true of light, one of the Acts of whatever luminary source there be [i.e., light, affecting things, may be quite independent of them and require no medium, air or other]. Certainly light is not brought into being by the dark thing, air, which on the contrary tends to gloom it over with some touch of earth so that it is no longer the brilliant reality: as reasonable to talk of some substance being sweet because it is mixed with something bitter.

If we are told that light is a mode of the air, we answer that this would necessarily imply that the air itself is changed to produce the new mode; in other words, its characteristic darkness must change into non-darkness; but we know that the air maintains its character, in no wise affected: the modification of a thing is an experience within that thing itself: light therefore is not a modification of the air, but a self-existent in whose

path the air happens to be present.

On this point we need dwell no longer; but there remains still a question.

7. Our investigation may be furthered by enquiring: Whether light finally perishes or simply returns to its source.

If it be a thing requiring to be caught and kept, domiciled within a recipient, we might think of it finally passing out of existence: if it be an Act not flowing out and away- but in circuit, with more of it within than is in outward progress from the luminary of which it is the Act- then it will not cease to exist as long as that centre is in being. And as the luminary moves, the light will reach new points- not in virtue of any change of course in or out or around, but simply because the act of the luminary exists and where there is no impediment is effective. Even if the distance of the sun from us were far greater than it is, the light would be continuous all that further way, as long as nothing checked or blocked it in the interval.

We distinguish two forms of activity; one is gathered within the luminary and is comparable to the life of the shining body; this is the vaster and is, as it were, the foundation or wellspring of all the act; the other lies next to the surface, the outer image of the inner content, a secondary activity though inseparable from the former. For every existent has an Act which is in its likeness: as long as the one exists, so does the other; yet while the original is stationary the activity reaches forth, in some things over a wide range, in others less far. There are weak and faint activities, and there are some, even, that do not appear; but there are also things whose activities are great and far-going; in the case of these the activity must be thought of as being lodged, both in the active and powerful source and in the point at which it settles. This may be observed in the case of an animal's eyes where the pupils gleam: they have a light which shows outside the orbs. Again there are living things which have an inner fire that in darkness shines out when they expand themselves and ceases to ray outward when they contract: the fire has not perished; it is a mere matter of it being rayed out or not.

But has the light gone inward?

No: it is simply no longer on the outside because the fire [of which it is the activity] is no longer outward going but has withdrawn towards the centre.

But surely the light has gone inward too?

No: only the fire, and when that goes inward the surface consists only of the non-luminous body; the fire can no longer act towards the outer.

The light, then, raying from bodies is an outgoing activity of a luminous body; the light within luminous bodies- understand; such as are primarily luminous- is the essential being embraced under the idea of that body. When such a body is brought into association with Matter, its activity produces colour: when there is no such association, it does not give colour- it gives merely an incipient on which colour might be formed- for

it belongs to another being [primal light] with which it retains its link, unable to desert from it, or from its [inner] activity.

And light is incorporeal even when it is the light of a body; there is therefore no question, strictly speaking, of its withdrawal or of its being present- these terms do not apply to its modes- and its essential existence is to be an activity. As an example: the image upon a mirror may be described as an activity exercised by the reflected object upon the potential recipient: there is no outgoing from the object [or ingoing into the reflecting body]; it is simply that, as long as the object stands there, the image also is visible, in the form of colour shaped to a certain pattern, and when the object is not there, the reflecting surface no longer holds what it held when the conditions were favourable.

So it is with the soul considered as the activity of another and prior soul: as long as that prior retains its place, its next, which is its activity, abides.

But what of a soul which is not an activity but the derivative of an activity- as we maintained the life-principle domiciled in the body to be- is its presence similar to that of the light caught and held in material things?

No; for in those things the colour is due to an actual intermixture of the active element [the light being alloyed with Matter]; whereas the life-principle of the body is something that holds from another soul closely present to it.

But when the body perishes- by the fact that nothing without part in soul can continue in being- when the body is perishing, no longer supported by that primal life-giving soul, or by the presence of any secondary phase of it, it is clear that the life-principle can no longer remain; but does this mean that the life perishes?

No; not even it; for it, too, is an image of that first out-shining; it is merely no longer where it was.

8. Imagine that beyond the heavenly system there existed some solid mass, and that from this sphere there was directed to it a vision utterly unimpeded and unrestricted: it is a question whether that solid form could be perceived by what has no sympathetic relation with it, since we have held that sympathetic relation comes about in virtue of the nature inherent in some one living being.

Obviously, if the sympathetic relationship depends upon the fact that percipients and things perceived are all members of one living being, no acts of perception could take place: that far body could be known only if it were a member of this living universe of ours- which condition being met, it certainly would be. But what if, without being thus in membership, it were a corporeal entity, exhibiting light and colour and the qualities by which we perceive things, and belonging to the same ideal category as the organ of vision?

If our supposition [of perception by sympathy] is true, there would still be no perception-

though we may be told that the hypothesis is clearly untenable since there is absurdity in supposing that sight can fail in grasping an illuminated object lying before it, and that the other senses in the presence of their particular objects remain unresponsive.

[The following passage, to nearly the end, is offered tentatively as a possible help to the interpretation of an obscure and corrupt place.]

[But why does such a failing appear impossible to us? We answer, because here and now in all the act and experience of our senses, we are within a unity, and members of it. What the conditions would be otherwise, remains to be considered: if living sympathy suffices the theory is established; if not, there are other considerations to support it.

That every living being is self-sensitive allows of no doubt; if the universe is a living being, no more need be said; and what is true of the total must be true of the members, as inbound in that one life.

But what if we are invited to accept the theory of knowledge by likeness (rejecting knowledge by the self-sensitiveness of a living unity)?

Awareness must be determined by the nature and character of the living being in which it occurs; perception, then, means that the likeness demanded by the hypothesis is within this self-identical living being (and not in the object)- for the organ by which the perception takes place is in the likeness of the living being (is merely the agent adequately expressing the nature of the living being): thus perception is reduced to a mental awareness by means of organs akin to the object.

If, then, something that is a living whole perceives not its own content but things like to its content, it must perceive them under the conditions of that living whole; this means that, in so far as it has perception, the objects appear not as its content but as related to its content.

And the objects are thus perceived as related because the mind itself has related them in order to make them amenable to its handling: in other words the causative soul or mind in that other sphere is utterly alien, and the things there, supposed to be related to the content of this living whole, can be nothing to our minds.]

This absurdity shows that the hypothesis contains a contradiction which naturally leads to untenable results. In fact, under one and the same heading, it presents mind and no mind, it makes things kin and no kin, it confuses similar and dissimilar: containing these irreconcilable elements, it amounts to no hypothesis at all. At one and the same moment it postulates and denies a soul, it tells of an All that is partial, of a something which is at once distinct and not distinct, of a nothingness which is no nothingness, of a complete thing that is incomplete: the hypothesis therefore must be dismissed; no deduction is possible where a thesis cancels its own propositions.

SIXTH TRACTATE.

PERCEPTION AND MEMORY.

1. Perceptions are no imprints, we have said, are not to be thought of as seal-impressions on soul or mind: accepting this statement, there is one theory of memory which must be definitely rejected.

Memory is not to be explained as the retaining of information in virtue of the lingering of an impression which in fact was never made; the two things stand or fall together; either an impression is made upon the mind and lingers when there is remembrance, or, denying the impression, we cannot hold that memory is its lingering. Since we reject equally the impression and the retention we are obliged to seek for another explanation of perception and memory, one excluding the notions that the sensible object striking upon soul or mind makes a mark upon it, and that the retention of this mark is memory.

If we study what occurs in the case of the most vivid form of perception, we can transfer our results to the other cases, and so solve our problem.

In any perception we attain by sight, the object is grasped there where it lies in the direct line of vision; it is there that we attack it; there, then, the perception is formed; the mind looks outward; this is ample proof that it has taken and takes no inner imprint, and does not see in virtue of some mark made upon it like that of the ring on the wax; it need not look outward at all if, even as it looked, it already held the image of the object, seeing by virtue of an impression made upon itself. It includes with the object the interval, for it tells at what distance the vision takes place: how could it see as outlying an impression within itself, separated by no interval from itself? Then, the point of magnitude: how could the mind, on this hypothesis, define the external size of the object or perceive that it has any- the magnitude of the sky, for instance, whose stamped imprint would be too vast for it to contain? And, most convincing of all, if to see is to accept imprints of the objects of our vision, we can never see these objects themselves; we see only vestiges they leave within us, shadows: the things themselves would be very different from our vision of them. And, for a conclusive consideration, we cannot see if the living object is in contact with the eye, we must look from a certain distance; this must be more applicable to the mind; supposing the mind to be stamped with an imprint of the object, it could not grasp as an object of vision what is stamped upon itself. For vision demands a duality, of seen and seeing: the seeing agent must be distinct and act upon an impression outside it, not upon one occupying the same point with it: sight can deal only with an object not inset but outlying.

2. But if perception does not go by impression, what is the process?

The mind affirms something not contained within it: this is precisely the characteristic of a power- not to accept impression but, within its allotted sphere, to act.

Besides, the very condition of the mind being able to exercise discrimination upon what it is to see and hear is not, of course, that these objects be equally impressions made upon it; on the contrary, there must be no impressions, nothing to which the mind is passive; there can be only acts of that in which the objects become known.

Our tendency is to think of any of the faculties as unable to know its appropriate object by its own uncompelled act; to us it seems to submit to its environment rather than simply to perceive it, though in reality it is the master, not the victim.

As with sight, so with hearing. It is the air which takes the impression, a kind of articulated stroke which may be compared to letters traced upon it by the object causing the sound; but it belongs to the faculty, and the soul-essence, to read the imprints thus appearing before it, as they reach the point at which they become matter of its knowledge.

In taste and smell also we distinguish between the impressions received and the sensations and judgements; these last are mental acts, and belong to an order apart from the experiences upon which they are exercised.

The knowing of the things belonging to the Intellectual is not in any such degree attended by impact or impression: they come forward, on the contrary, as from within, unlike the sense-objects known as from without: they have more emphatically the character of acts; they are acts in the stricter sense, for their origin is in the soul, and every concept of this Intellectual order is the soul about its Act.

Whether, in this self-vision, the soul is a duality and views itself as from the outside- while seeing the Intellectual-Principal as a unity, and itself with the Intellectual-Principle as a unity- this question is investigated elsewhere.

3. With this prologue we come to our discussion of Memory.

That the soul, or mind, having taken no imprint, yet achieves perception of what it in no way contains need not surprise us; or rather, surprising though it is, we cannot refuse to believe in this remarkable power.

The Soul is the Reason-Principle of the universe, ultimate among the Intellectual Beings- its own essential Nature is one of the Beings of the Intellectual Realm- but it is the primal Reason-Principle of the entire realm of sense.

Thus it has dealings with both orders- benefited and quickened by the one, but by the other beguiled, falling before resemblances, and so led downwards as under spell. Poised midway, it is aware of both spheres.

Of the Intellectual it is said to have intuition by memory upon approach, for it knows them by a certain natural identity with them; its knowledge is not attained by besetting them, so to speak, but by in a definite degree possessing them; they are its natural vision; they are itself in a more radiant mode, and it rises from its duller pitch to that greater brilliance in a sort of awakening, a progress from its latency to its act.

To the sense-order it stands in a similar nearness and to such things it gives a radiance out of its own store and, as it were, elaborates them to visibility: the power is always ripe

and, so to say, in travail towards them, so that, whenever it puts out its strength in the direction of what has once been present in it, it sees that object as present still; and the more intent its effort the more durable is the presence. This is why, it is agreed, children have long memory; the things presented to them are not constantly withdrawn but remain in sight; in their case the attention is limited but not scattered: those whose faculty and mental activity are busied upon a multitude of subjects pass quickly over all, lingering on none.

Now, if memory were a matter of seal-impressions retained, the multiplicity of objects would have no weakening effect on the memory. Further, on the same hypothesis, we would have no need of thinking back to revive remembrance; nor would we be subject to forgetting and recalling; all would lie engraved within.

The very fact that we train ourselves to remember shows that what we get by the process is a strengthening of the mind: just so, exercises for feet and hands enable us to do easily acts which in no sense contained or laid up in those members, but to which they may be fitted by persevering effort.

How else can it be explained that we forget a thing heard once or twice but remember what is often repeated, and that we recall a long time afterwards what at first hearing we failed to hold?

It is no answer to say that the parts present themselves sooner than the entire imprint- why should they too be forgotten?- [there is no question of parts, for] the last hearing, or our effort to remember, brings the thing back to us in a flash.

All these considerations testify to an evocation of that faculty of the soul, or mind, in which remembrance is vested: the mind is strengthened, either generally or to this particular purpose.

Observe these facts: memory follows upon attention; those who have memorized much, by dint of their training in the use of leading indications [suggestive words and the like], reach the point of being easily able to retain without such aid: must we not conclude that the basis of memory is the soul-power brought to full strength?

The lingering imprints of the other explanation would tell of weakness rather than power; for to take imprint easily is to be yielding. An impression is something received passively; the strongest memory, then, would go with the least active nature. But what happens is the very reverse: in no pursuit to technical exercises tend to make a man less the master of his acts and states. It is as with sense-perception; the advantage is not to the weak, the weak eye for example, but to that which has the fullest power towards its exercise. In the old, it is significant, the senses are dulled and so is the memory.

Sensation and memory, then, are not passivity but power.

And, once it is admitted that sensations are not impressions, the memory of a sensation

cannot consist in the retention of an impression that was never made.

Yes: but if it is an active power of the mind, a fitness towards its particular purpose, why does it not come at once- and not with delay- to the recollection of its unchanging objects?

Simply because the power needs to be poised and prepared: in this it is only like all the others, which have to be readied for the task to which their power reaches, some operating very swiftly, others only after a certain self-concentration.

Quick memory does not in general go with quick wit: the two do not fall under the same mental faculty; runner and boxer are not often united in one person; the dominant idea differs from man to man.

Yet there could be nothing to prevent men of superior faculty from reading impressions on the mind; why should one thus gifted be incapable of what would be no more than a passive taking and holding?

That memory is a power of the Soul [not a capacity for taking imprint] is established at a stroke by the consideration that the soul is without magnitude.

And- one general reflection- it is not extraordinary that everything concerning soul should proceed in quite other ways than appears to people who either have never enquired, or have hastily adopted delusive analogies from the phenomena of sense, and persist in thinking of perception and remembrance in terms of characters inscribed on plates or tablets; the impossibilities that beset this theory escape those that make the soul incorporeal equally with those to whom it is corporeal.

SEVENTH TRACTATE.

THE IMMORTALITY OF THE SOUL.

1. Whether every human being is immortal or we are wholly destroyed, or whether something of us passes over to dissolution and destruction, while something else, that which is the true man, endures for ever- this question will be answered here for those willing to investigate our nature.

We know that man is not a thing of one only element; he has a soul and he has, whether instrument or adjunct in some other mode, a body: this is the first distinction; it remains to investigate the nature and essential being of these two constituents.

Reason tells us that the body as, itself too, a composite, cannot for ever hold together; and our senses show us it breaking up, wearing out, the victim of destructive agents of many kinds, each of its constituents going its own way, one part working against another, perverting, wrecking, and this especially when the material masses are no longer presided over by the reconciling soul.

And when each single constituent is taken as a thing apart, it is still not a unity; for it is divisible into shape and matter, the duality without which bodies at their very simplest cannot cohere.

The mere fact that, as material forms, they have bulk means that they can be lopped and crushed and so come to destruction.

If this body, then, is really a part of us, we are not wholly immortal; if it is an instrument of ours, then, as a thing put at our service for a certain time, it must be in its nature passing.

The sovereign principle, the authentic man, will be as Form to this Matter or as agent to this instrument, and thus, whatever that relation be, the soul is the man.

2. But of what nature is this sovereign principle?

If material, then definitely it must fall apart; for every material entity, at least, is something put together.

If it is not material but belongs to some other Kind, that new substance must be investigated in the same way or by some more suitable method.

But our first need is to discover into what this material form, since such the soul is to be, can dissolve.

Now: of necessity life is inherent to soul: this material entity, then, which we call soul must have life ingrained within it; but [being a composite as by hypothesis, material] it must be made up of two or more bodies; that life, then, will be vested, either in each and all of those bodies or in one of them to the exclusion of the other or others; if this be not so, then there is no life present anywhere.

If any one of them contains this ingrained life, that one is the soul. But what sort of an entity have we there; what is this body which of its own nature possesses soul?

Fire, air, water, earth, are in themselves soulless- whenever soul is in any of them, that life is borrowed- and there are no other forms of body than these four: even the school that believes there are has always held them to be bodies, not souls, and to be without life.

None of these, then, having life, it would be extraordinary if life came about by bringing them together; it is impossible, in fact, that the collocation of material entities should produce life, or mindless entities mind.

No one, moreover, would pretend that a mere chance mixing could give such results: some regulating principle would be necessary, some Cause directing the admixture: that guiding principle would be- soul.

Body- not merely because it is a composite, but even were it simplex- could not exist unless there were soul in the universe, for body owes its being to the entrance of a Reason-Principle into Matter, and only from soul can a Reason-Principle come.

3. Anyone who rejects this view, and holds that either atoms or some entities void of part coming together produce soul, is refuted by the very unity of soul and by the prevailing sympathy as much as by the very coherence of the constituents. Bodily materials, in nature repugnant to unification and to sensation, could never produce unity or self-sensitiveness, and soul is self-sensitive. And, again, constituents void of part could never produce body or bulk.

Perhaps we will be asked to consider body as a simple entity [disregarding the question of any constituent elements]: they will tell us, then, that no doubt, as purely material, it cannot have a self-springing life- since matter is without quality- but that life is introduced by the fact that the Matter is brought to order under Forming-Idea. But if by this Forming-Idea they mean an essential, a real being, then it is not the conjoint of body and idea that constitutes soul: it must be one of the two items and that one, being [by hypothesis] outside of the Matter, cannot be body: to make it body would simply force us to repeat our former analysis.

If on the contrary they do not mean by this Forming-Idea a real being, but some condition or modification of the Matter, they must tell us how and whence this modification, with resultant life, can have found the way into the Matter: for very certainly Matter does not mould itself to pattern or bring itself to life.

It becomes clear that since neither Matter nor body in any mode has this power, life must be brought upon the stage by some directing principle external and transcendent to all that is corporeal.

In fact, body itself could not exist in any form if soul-power did not: body passes; dissolution is in its very nature; all would disappear in a twinkling if all were body. It is no help to erect some one mode of body into soul; made of the same Matter as the rest, this soul body would fall under the same fate: of course it could never really exist: the universe of things would halt at the material, failing something to bring Matter to shape.

Nay more: Matter itself could not exist: the totality of things in this sphere is dissolved if it be made to depend upon the coherence of a body which, though elevated to the nominal rank of "soul," remains air, fleeting breath [the Stoic pneuma, rarefied matter, "spirit" in the lower sense], whose very unity is not drawn from itself.

All bodies are in ceaseless process of dissolution; how can the kosmos be made over to any one of them without being turned into a senseless haphazard drift? This pneuma-orderless except under soul- how can it contain order, reason, intelligence? But: given soul, all these material things become its collaborators towards the coherence of the kosmos and of every living being, all the qualities of all the separate objects converging to the purposes of the universe: failing soul in the things of the universe, they could not even exist, much less play their ordered parts.

4. Our opponents themselves are driven by stress of fact to admit the necessity of a prior to body, a higher thing, some phase or form of soul; their "pneuma" [finer-body or spirit] is intelligent, and they speak of an "intellectual fire"; this "fire" and "spirit" they imagine to be necessary to the existence of the higher order which they conceive as demanding some base, though the real difficulty, under their theory, is to find a base for material things whose only possible base is, precisely, the powers of soul.

Besides, if they make life and soul no more than this "pneuma," what is the import of that repeated qualification of theirs "in a certain state," their refuge when they are compelled to recognize some acting principle apart from body? If not every pneuma is a soul, but thousands of them soulless, and only the pneuma in this "certain state" is soul, what follows? Either this "certain state," this shaping or configuration of things, is a real being or it is nothing.

If it is nothing, only the pneuma exists, the "certain state" being no more than a word; this leads imperatively to the assertion that Matter alone exists, Soul and God mere words, the lowest alone is.

If on the contrary this "configuration" is really existent- something distinct from the underlie or Matter, something residing in Matter but itself immaterial as not constructed out of Matter, then it must be a Reason-Principle, incorporeal, a separate Nature.

There are other equally cogent proofs that the soul cannot be any form of body.

Body is either warm or cold, hard or soft, liquid or solid, black or white, and so on through all the qualities by which one is different from another; and, again, if a body is warm it diffuses only warmth, if cold it can only chill, if light its presence tells against the total weight which if heavy it increases; black, it darkens; white, it lightens; fire has not the property of chilling or a cold body that of warming.

Soul, on the contrary, operates diversely in different living beings, and has quite contrary effects in any one: its productions contain the solid and the soft, the dense and the sparse, bright and dark, heavy and light. If it were material, its quality- and the colour it must have- would produce one invariable effect and not the variety actually observed.

5. Again, there is movement: all bodily movement is uniform; failing an incorporeal soul, how account for diversity of movement? Predilections, reasons, they will say; that is all very well, but these already contain that variety and therefore cannot belong to body which is one and simplex, and, besides, is not participant in reason- that is, not in the sense here meant, but only as it is influenced by some principle which confers upon it the qualities of, for instance, being warm or cold.

Then there is growth under a time-law, and within a definite limit: how can this belong strictly to body? Body can indeed be brought to growth, but does not itself grow except in the sense that in the material mass a capacity for growing is included as an

accessory to some principle whose action upon the body causes growth.

Supposing the soul to be at once a body and the cause of growth, then, if it is to keep pace with the substance it augments, it too must grow; that means it must add to itself a similar bodily material. For the added material must be either soul or soulless body: if soul, whence and how does it enter, and by what process is it adjoined [to the soul which by hypothesis is body]; if soulless, how does such an addition become soul, falling into accord with its precedent, making one thing with it, sharing the stored impressions and notions of that initial soul instead, rather, of remaining an alien ignoring all the knowledge laid up before?

Would not such a soulless addition be subject to just such loss and gain of substance, in fact to the non-identity, which marks the rest of our material mass?

And, if this were so, how explain our memories or our recognition of familiar things when we have no stably identical soul?

Assume soul to be a body: now in the nature of body, characteristically divisible, no one of the parts can be identical with the entire being; soul, then, is a thing of defined size, and if curtailed must cease to be what it is; in the nature of a quantitative entity this must be so, for, if a thing of magnitude on diminution retains its identity in virtue of its quality, this is only saying that bodily and quantitatively it is different even if its identity consists in a quality quite independent of quantity.

What answer can be made by those declaring soul to be corporeal? Is every part of the soul, in any one body, soul entire, soul perfectly true to its essential being? and may the same be said of every part of the part? If so, the magnitude makes no contribution to the soul's essential nature, as it must if soul [as corporeal] were a definite magnitude: it is, as body cannot be, an "all-everywhere," a complete identity present at each and every point, the part all that the whole is.

To deny that every part is soul is to make soul a compound from soulless elements. Further, if a definite magnitude, the double limit of larger or smaller, is to be imposed upon each separate soul, then anything outside those limits is no soul.

Now, a single coition and a single sperm suffice to a twin birth or in the animal order to a litter; there is a splitting and diverging of the seed, every diverging part being obviously a whole: surely no honest mind can fail to gather that a thing in which part is identical with whole has a nature which transcends quantity, and must of necessity be without quantity: only so could it remain identical when quantity is filched from it, only by being indifferent to amount or extension, by being in essence something apart. Thus the Soul and the Reason-Principles are without quantity.

6. It is easy to show that if the Soul were a corporeal entity, there could be no sense-perception, no mental act, no knowledge, no moral excellence, nothing of all that is noble.

There can be no perception without a unitary percipient whose identity enables it to grasp an object as an entirety.

The several senses will each be the entrance point of many diverse perceptions; in any one object there may be many characteristics; any one organ may be the channel of a group of objects, as for instance a face is known not by a special sense for separate features, nose, eyes; etc., but by one sense observing all in one act.

When sight and hearing gather their varying information, there must be some central unity to which both report. How could there be any statement of difference unless all sense-impressions appeared before a common identity able to take the sum of all?

This there must be, as there is a centre to a circle; the sense-impressions converging from every point of occurrence will be as lines striking from a circumference to what will be a true centre of perception as being a veritable unity.

If this centre were to break into separate points- so that the sense-impressions fell upon the two ends of a line- then, either it must reknit itself to unity and identity, perhaps at the mid-point of the line, or all remains unrelated, every end receiving the report of its particular field exactly as you and I have our distinct sense experiences.

Suppose the sense-object be such a unity as a face: all the points of observation must be brought together in one visual total, as is obvious since there could be no panorama of great expanses unless the detail were compressed to the capacity of the pupils.

Much more must this be true in the case of thoughts, partless entities as they are, impinging upon the centre of consciousness which [to receive them] must itself be void of part.

Either this or, supposing the centre of consciousness to be a thing of quantity and extension, the sensible object will coincide with it point by point of their co-expansion so that any given point in the faculty will perceive solely what coincides with it in the object: and thus nothing in us could perceive any thing as a whole.

This cannot be: the faculty entire must be a unity; no such dividing is possible; this is no matter in which we can think of equal sections coinciding; the centre of consciousness has no such relation of equality with any sensible object. The only possible ratio of divisibility would be that of the number of diverse elements in the impinging sensation: are we then to suppose that each part of the soul, and every part of each part, will have perception? Or will the part of the parts have none? That is impossible: every part, then, has perception; the [hypothetical] magnitude, of soul and each part of soul, is infinitely divisible; there will therefore be in each part an infinite number of perceptions of the object, and therefore an infinitude of representations of it at our centre of consciousness.

If the sentient be a material entity sensation could only be of the order of seal-impressions struck by a ring on wax, in this case by sensible objects on the blood

or on the intervenient air.

If, at this, the impression is like one made in liquids- as would be reasonable- it will be confused and wavering as upon water, and there can be no memory. If the impressions are permanent, then either no fresh ones can be stamped upon the occupied ground- and there can be no change of sensations- or, others being made, the former will be obliterated; and all record of the past is done away with.

If memory implies fresh sensations imposed upon former ones, the earlier not barring their way, the soul cannot be a material entity.

7. We come to the same result by examining the sense of pain. We say there is pain in the finger: the trouble is doubtless in the finger, but our opponents must admit that the sensation of the pain is in the centre of consciousness. The suffering member is one thing, the sense of suffering is another: how does this happen?

By transmission, they will say: the psychic pneuma [= the semi-material principle of life] stationed at the finger suffers first; and stage by stage the trouble is passed on until at last it reaches the centre of consciousness.

But on this theory, there must be a sensation in the spot first suffering pain, and another sensation at a second point of the line of transmission, another in the third and so on; many sensations, in fact an unlimited series, to deal with one pain; and at the last moment the centre of consciousness has the sensation of all these sensations and of its own sensation to boot. Or to be exact, these serial sensations will not be of the pain in the finger: the sensation next in succession to the suffering finger will be of pain at the joint, a third will tell of a pain still higher up: there will be a series of separate pains: The centre of consciousness will not feel the pain seated at the finger, but only that impinging upon itself: it will know this alone, ignore the rest and so have no notion that the finger is in pain.

Thus: Transmission would not give sensation of the actual condition at the affected spot: it is not in the nature of body that where one part suffers there should be knowledge in another part; for body is a magnitude, and the parts of every magnitude are distinct parts; therefore we need, as the sentient, something of a nature to be identical to itself at any and every spot; this property can belong only to some other form of being than body.

8. It can be shown also that the intellectual act would similarly be impossible if the soul were any form of body.

If sensation is apprehension by means of the soul's employment of the body, intellection cannot be a similar use of the body or it would be identical with sensation. If then intellection is apprehension apart from body, much more must there be a distinction between the body and the intellectual principle: sensation for objects of sense, intellection for the intellectual object. And even if this be rejected, it must still be admitted that there do exist intellections of intellectual objects and perceptions of

objects not possessing magnitude: how, we may then ask, can a thing of magnitude know a thing that has no magnitude, or how can the partless be known by means of what has parts? We will be told "By some partless part." But, at this, the intellective will not be body: for contact does not need a whole; one point suffices. If then it be conceded- and it cannot be denied- that the primal intellections deal with objects completely incorporeal, the principle of intellection itself must know by virtue of being, or becoming, free from body. Even if they hold that all intellection deals with the ideal forms in Matter, still it always takes place by abstraction from the bodies [in which these forms appear] and the separating agent is the Intellectual-Principle. For assuredly the process by which we abstract circle, triangle, line or point, is not carried through by the aid of flesh or Matter of any kind; in all such acts the soul or mind must separate itself from the material: at once we see that it cannot be itself material. Similarly it will be agreed that, as beauty and justice are things without magnitude, so must be the intellective act that grasps them.

When such non-magnitudes come before the soul, it receives them by means of its partless phase and they will take position there in partless wise.

Again: if the Soul is a body, how can we account for its virtues- moral excellence [Sophrosyne], justice, courage and so forth? All these could be only some kind of rarefied body [pneuma], or blood in some form; or we might see courage as a certain resisting power in that pneuma; moral quality would be its happy blending; beauty would lie wholly in the agreeable form of impressions received, such comeliness as leads us to describe people as attractive and beautiful from their bodily appearance. No doubt strength and grace of form go well enough with the idea of rarefied body; but what can this rarefied body want with moral excellence? On the contrary its interest would lie in being comfortable in its environments and contacts, in being warmed or pleasantly cool, in bringing everything smooth and caressing and soft around it: what could it care about a just distribution?

Then consider the objects of the soul's contemplation, virtue and the other Intellectual forms with which it is occupied; are these eternal or are we to think that virtue rises here or there, helps, then perishes? These things must have an author and a source and there, again, we are confronted by something perdurable: the soul's contemplation, then, must be of the eternal and unchanging, like the concepts of geometry: if eternal and unchanging, these objects are not bodies: and that which is to receive them must be of equivalent nature: it cannot therefore be body, since all body-nature lacks permanence, is a thing of flux.

8. A. [sometimes appearing as 9] There are those who insist on the activities observed in bodies- warming, chilling, thrusting, pressing- and class soul with body, as it were to assure its efficacy. This ignores the double fact that the very bodies themselves exercise such efficiency by means of the incorporeal powers operating in them, and that these are not the powers we attribute to soul: intellection, perception, reasoning, desire, wise and effective action in all regards, these point to a very different form of being.

In transferring to bodies the powers of the unembodied, this school leaves nothing to

that higher order. And yet that it is precisely in virtue of bodiless powers that bodies possess their efficiency is clear from certain reflections:

It will be admitted that quality and quantity are two different things, that body is always a thing of quantity but not always a thing of quality: matter is not qualified. This admitted, it will not be denied that quality, being a different thing from quantity, is a different thing from body. Obviously quality could not be body when it has not quantity as all body must; and, again, as we have said, body, any thing of mass, on being reduced to fragments, ceases to be what it was, but the quality it possessed remains intact in every particle- for instance the sweetness of honey is still sweetness in each speck- this shows that sweetness and all other qualities are not body.

Further: if the powers in question were bodies, then necessarily the stronger powers would be large masses and those less efficient small masses: but if there are large masses with small while not a few of the smaller masses manifest great powers, then the efficiency must be vested in something other than magnitude; efficacy, thus, belongs to non-magnitude. Again; Matter, they tell us, remains unchanged as long as it is body, but produces variety upon accepting qualities; is not this proof enough that the entrants [with whose arrival the changes happen] are Reason-Principles and not of the bodily order?

They must not remind us that when pneuma and blood are no longer present, animals die: these are necessary no doubt to life, but so are many other things of which none could possibly be soul: and neither pneuma nor blood is present throughout the entire being; but soul is.

8. B. (10) If the soul is body and permeates the entire body-mass, still even in this entire permeation the blending must be in accord with what occurs in all cases of bodily admixing.

Now: if in the admixing of bodies neither constituent can retain its efficacy, the soul too could no longer be effective within the bodies; it could but be latent; it will have lost that by which it is soul, just as in an admixture of sweet and bitter the sweet disappears: we have, thus, no soul.

Two bodies [i.e., by hypothesis, the soul and the human body] are blended, each entire through the entirety of the other; where the one is, the other is also; each occupies an equal extension and each the whole extension; no increase of size has been caused by the juncture: the one body thus inblended can have left in the other nothing undivided. This is no case of mixing in the sense of considerable portions alternating; that would be described as collocation; no; the incoming entity goes through the other to the very minutest point- an impossibility, of course; the less becoming equal to the greater; still, all is traversed throughout and divided throughout. Now if, thus, the inblending is to occur point by point, leaving no undivided material anywhere, the division of the body concerned must have been a division into (geometrical) points: an impossibility. The division is an infinite series- any material particle may be cut in two- and the infinities are not merely potential, they are actual.

Therefore body cannot traverse anything as a whole traversing a whole. But soul does this. It is therefore incorporeal.

8. C. (11) We come to the theory that this pneuma is an earlier form, one which on entering the cold and being tempered by it develops into soul by growing finer under that new condition. This is absurd at the start, since many living beings rise in warmth and have a soul that has been tempered by cold: still that is the theory- the soul has an earlier form, and develops its true nature by force of external accidents. Thus these teachers make the inferior precede the higher, and before that inferior they put something still lower, their "Habitudo." It is obvious that the Intellectual-Principle is last and has sprung from the soul, for, if it were first of all, the order of the series must be, second the soul, then the nature-principle, and always the later inferior, as the system actually stands.

If they treat God as they do the Intellectual-Principle- as later, engendered and deriving intellection from without- soul and intellect and God may prove to have no existence: this would follow if a potentiality could not come to existence, or does not become actual, unless the corresponding actuality exists. And what could lead it onward if there were no separate being in previous actuality? Even on the absurd supposition that the potentially existent brings itself to actuality, it must be looking to some Term, and that must be no potentiality but actual.

No doubt the eternally self-identical may have potentiality and be self-led to self-realization, but even in this case the being considered as actualized is of higher order than the being considered as merely capable of actualization and moving towards a desired Term.

Thus the higher is the earlier, and it has a nature other than body, and it exists always in actuality: Intellectual-Principle and Soul precede Nature: thus, Soul does not stand at the level of pneuma or of body.

These arguments are sufficient in themselves, though many others have been framed, to show that the soul is not to be thought of as a body.

8. D. (12) Soul belongs, then, to another Nature: What is this? Is it something which, while distinct from body, still belongs to it, for example a harmony or accord?

The Pythagorean school holds this view thinking that the soul is, with some difference, comparable to the accord in the strings of a lyre. When the lyre is strung a certain condition is produced upon the strings, and this is known as accord: in the same way our body is formed of distinct constituents brought together, and the blend produces at once life and that soul which is the condition existing upon the bodily total.

That this opinion is untenable has already been shown at length. The soul is a prior [to body], the accord is a secondary to the lyre. Soul rules, guides and often combats the body; as an accord of body it could not do these things. Soul is a real being, accord is

not. That due blending [or accord] of the corporeal materials which constitute our frame would be simply health. Each separate part of the body, entering as a distinct entity into the total, would require a distinct soul [its own accord or note], so that there would be many souls to each person. Weightiest of all; before this soul there would have to be another soul to bring about the accord as, in the case of the musical instrument, there is the musician who produces the accord upon the strings by his own possession of the principle on which he tunes them: neither musical strings nor human bodies could put themselves in tune.

Briefly, the soulless is treated as ensouled, the unordered becomes orderly by accident, and instead of order being due to soul, soul itself owes its substantial existence to order- which is self-caused. Neither in the sphere of the partial, nor in that of Wholes could this be true. The soul, therefore, is not a harmony or accord.

8. E. (13) We come to the doctrine of the Entelechy, and must enquire how it is applied to soul.

It is thought that in the Conjoint of body and soul the soul holds the rank of Form to the Matter which here is the ensouled body- not, then, Form to every example of body or to body as merely such, but to a natural organic body having the potentiality of life.

Now; if the soul has been so injected as to be assimilated into the body as the design of a statue is worked into the bronze, it will follow that, upon any dividing of the body, the soul is divided with it, and if any part of the body is cut away a fragment of soul must go with it. Since an Entelechy must be inseparable from the being of which it is the accomplished actuality, the withdrawal of the soul in sleep cannot occur; in fact sleep itself cannot occur. Moreover if the soul is an Entelechy, there is an end to the resistance offered by reason to the desires; the total [of body and Entelechy-Soul] must have one-uniform experience throughout, and be aware of no internal contradiction. Sense-perception might occur; but intellection would be impossible. The very upholders of the Entelechy are thus compelled to introduce another soul, the Intellect, to which they ascribe immortality. The reasoning soul, then, must be an Entelechy- if the word is to be used at all- in some other mode.

Even the sense-perceiving soul, in its possession of the impressions of absent objects, must hold these without aid from the body; for otherwise the impression must be present in it like shape and images, and that would mean that it could not take in fresh impressions; the perceptive soul, then, cannot be described as this Entelechy inseparable from the body. Similarly the desiring principle, dealing not only with food and drink but with things quite apart from body; this also is no inseparable Entelechy.

There remains the vegetal principle which might seem to suggest the possibility that, in this phase, the soul may be the inseparable Entelechy of the doctrine. But it is not so. The principle of every growth lies at the root; in many plants the new springing takes place at the root or just above it: it is clear that the life-principle, the vegetal soul, has abandoned the upper portions to concentrate itself at that one spot: it was therefore not present in the whole as an inseparable Entelechy. Again, before the plant's

development the life-principle is situated in that small beginning: if, thus, it passes from large growth to small and from the small to the entire growth, why should it not pass outside altogether?

An Entelechy is not a thing of parts; how then could it be present partwise in the partible body?

An identical soul is now the soul of one living being now of another: how could the soul of the first become the soul of the latter if soul were the Entelechy of one particular being? Yet that this transference does occur is evident from the facts of animal metasomatism.

The substantial existence of the soul, then, does not depend upon serving as Form to anything: it is an Essence which does not come into being by finding a seat in body; it exists before it becomes also the soul of some particular, for example, of a living being, whose body would by this doctrine be the author of its soul.

What, then, is the soul's Being? If it is neither body nor a state or experience of body, but is act and creation: if it holds much and gives much, and is an existence outside of body; of what order and character must it be? Clearly it is what we describe as Veritable Essence. The other order, the entire corporeal Kind, is process; it appears and it perishes; in reality it never possesses Being, but is merely protected, in so far as it has the capacity, by participating in what authentically is.

9. (14) Over against that body, stands the principle which is self-caused, which is all that neither enters into being nor passes away, the principle whose dissolution would mean the end of all things never to be restored if once this had ceased to be, the sustaining principle of things individually, and of this kosmos, which owes its maintenance and its ordered system to the soul.

This is the starting point of motion and becomes the leader and provider of motion to all else: it moves by its own quality, and every living material form owes life to this principle, which of itself lives in a life that, being essentially innate, can never fail.

Not all things can have a life merely at second hand; this would give an infinite series: there must be some nature which, having life primally, shall be of necessity indestructible, immortal, as the source of life to all else that lives. This is the point at which all that is divine and blessed must be situated, living and having being of itself, possessing primal being and primal life, and in its own essence rejecting all change, neither coming to be nor passing away.

Whence could such a being arise or into what could it disappear: the very word, strictly used, means that the thing is perdurable. Similarly white, the colour, cannot be now white and now not white: if this "white" were a real being it would be eternal as well as being white: the colour is merely white but whatsoever possesses being, indwelling by nature and primal, will possess also eternal duration. In such an entity this primal and eternal Being cannot be dead like stone or plank: it must be alive, and that with a life

unalloyed as long as it remains self-gathered: when the primal Being blends with an inferior principle, it is hampered in its relation to the highest, but without suffering the loss of its own nature since it can always recover its earliest state by turning its tendency back to its own.

10. (15) That the soul is of the family of the diviner nature, the eternal, is clear from our demonstration that it is not material: besides it has neither shape or colour nor is it tangible. But there are other proofs.

Assuming that the divine and the authentically existent possesses a life beneficent and wise, we take the next step and begin with working out the nature of our own soul.

Let us consider a soul, not one that has appropriated the unreasoned desires and impulses of the bodily life, or any other such emotion and experience, but one that has cast all this aside, and as far as possible has no commerce with the bodily. Such a soul demonstrates that all evil is accretion, alien, and that in the purged soul the noble things are immanent, wisdom and all else that is good, as its native store.

If this is the soul once it has returned to its self, how deny that it is the nature we have identified with all the divine and eternal? Wisdom and authentic virtue are divine, and could not be found in the chattel mean and mortal: what possesses these must be divine by its very capacity of the divine, the token of kinship and of identical substance.

Hence, too, any one of us that exhibits these qualities will differ but little as far as soul is concerned from the Supernals; he will be less than they only to the extent in which the soul is, in him, associated with body.

This is so true that, if every human being were at that stage, or if a great number lived by a soul of that degree, no one would be so incredulous as to doubt that the soul in man is immortal. It is because we see everywhere the spoiled souls of the great mass that it becomes difficult to recognize their divinity and immortality.

To know the nature of a thing we must observe it in its unalloyed state, since any addition obscures the reality. Clear, then look: or, rather, let a man first purify himself and then observe: he will not doubt his immortality when he sees himself thus entered into the pure, the Intellectual. For, what he sees is an Intellectual-Principle looking on nothing of sense, nothing of this mortality, but by its own eternity having intellection of the eternal: he will see all things in this Intellectual substance, himself having become an Intellectual Kosmos and all lightsome, illuminated by the truth streaming from The Good, which radiates truth upon all that stands within that realm of the divine.

Thus he will often feel the beauty of that word "Farewell: I am to you an immortal God," for he has ascended to the Supreme, and is all one strain to enter into likeness with it.

If the purification puts the human into knowledge of the highest, then, too, the science latent within becomes manifest, the only authentic knowing. For it is not by running hither and thither outside of itself that the soul understands morality and right conduct: it

learns them of its own nature, in its contact with itself, in its intellectual grasp of itself, seeing deeply impressed upon it the images of its primal state; what was one mass of rust from long neglect it has restored to purity.

Imagine living gold: it files away all that is earthy about it, all that kept it in self-ignorance preventing it from knowing itself as gold; seen now unalloyed it is at once filled with admiration of its worth and knows that it has no need of any other glory than its own, triumphant if only it be allowed to remain purely to itself.

11. (16) What intelligent mind can doubt the immortality of such a value, one in which there is a life self-springing and therefore not to be destroyed?

This is at any rate a life not imported from without, not present in the mode of the heat in fire- for if heat is characteristic of the fire proper, it certainly is adventitious to the Matter underlying the fire; or fire, too, would be everlasting- it is not in any such mode that the soul has life: this is no case of a Matter underlying and a life brought into that Matter and making it into soul [as heat comes into matter and makes it fire].

Either life is Essential Reality, and therefore self-living- the very thing we have been seeking- and undeniably immortal: or it, too, is a compound and must be traced back through all the constituents until an immortal substance is reached, something deriving movement from itself, and therefore debarred from accepting death.

Even supposing life could be described as a condition imposed upon Matter, still the source from which this condition entered the Matter must necessarily be admitted to be immortal simply by being unable to take into itself the opposite of the life which it conveys.

Of course, life is no such mere condition, but an independent principle, effectively living.

12. (17) A further consideration is that if every soul is to be held dissoluble the universe must long since have ceased to be: if it is pretended that one kind of soul, our own for example, is mortal, and another, that of the All, let us suppose, is immortal, we demand to know the reason of the difference alleged.

Each is a principle of motion, each is self-living, each touches the same sphere by the same tentacles, each has intellection of the celestial order and of the super-celestial, each is seeking to win to what has essential being, each is moving upwards to the primal source.

Again: the soul's understanding of the Absolute Forms by means of the visions stored up in it is effected within itself; such perception is reminiscence; the soul then must have its being before embodiment, and drawing on an eternal science, must itself be eternal.

Every dissoluble entity, that has come to be by way of groupment, must in the nature of things be broken apart by that very mode which brought it together: but the soul is one and simplex, living not in the sense of potential reception of life but by its own energy;

and this can be no cause of dissolution.

But, we will be told, it tends to destruction by having been divided (in the body) and so becoming fragmentary.

No: the soul, as we have shown, is not a mass, not a quantity.

May not it change and so come to destruction?

No: the change that destroys annuls the form but leaves the underlying substance: and that could not happen to anything except a compound.

If it can be destroyed in no such ways, it is necessarily indestructible.

13. (18) But how does the soul enter into body from the aloofness of the Intellectual?

There is the Intellectual-Principle which remains among the intellectual beings, living the purely intellective life; and this, knowing no impulse or appetite, is for ever stationary in that Realm. But immediately following upon it, there is that which has acquired appetite and, by this accruement, has already taken a great step outward; it has the desire of elaborating order on the model of what it has seen in the Intellectual-Principle: pregnant by those Beings, and in pain to the birth, it is eager to make, to create. In this new zest it strains towards the realm of sense: thus, while this primal soul in union with the Soul of the All transcends the sphere administered, it is inevitably turned outward, and has added the universe to its concern: yet in choosing to administer the partial and exiling itself to enter the place in which it finds its appropriate task, it still is not wholly and exclusively held by body: it is still in possession of the unembodied; and the Intellectual-Principle in it remains immune. As a whole it is partly in body, partly outside: it has plunged from among the primals and entered this sphere of tertiaries: the process has been an activity of the Intellectual-Principle, which thus, while itself remaining in its identity, operates throughout the soul to flood the universe with beauty and penetrant order- immortal mind, eternal in its unfailing energy, acting through immortal soul.

14. (19) As for the souls of the other living beings, fallen to the degree of entering brute bodies, these too must be immortal. And if there is in the animal world any other phase of soul, its only possible origin, since it is the life-giver, is, still, that one principle of life: so too with the soul in the vegetal order.

All have sprung from one source, all have life as their own, all are incorporeal, indivisible, all are real-beings.

If we are told that man's soul being tripartite must as a compound entity be dissolved, our answer shall be that pure souls upon their emancipation will put away all that has fastened to them at birth, all that increment which the others will long retain.

But even that inferior phase thus laid aside will not be destroyed as long as its source continues to exist, for nothing from the realm of real being shall pass away.

15. (20) Thus far we have offered the considerations appropriate to those asking for demonstration: those whose need is conviction by evidence of the more material order are best met from the abundant records relevant to the subject: there are also the oracles of the Gods ordering the appeasing of wronged souls and the honouring of the dead as still sentient, a practice common to all mankind: and again, not a few souls, once among men, have continued to serve them after quitting the body and by revelations, practically helpful, make clear, as well, that the other souls, too, have not ceased to be.

EIGHTH TRACTATE.

THE SOUL'S DESCENT INTO BODY.

1. Many times it has happened: Lifted out of the body into myself; becoming external to all other things and self-encentered; beholding a marvellous beauty; then, more than ever, assured of community with the loftiest order; enacting the noblest life, acquiring identity with the divine; stationing within It by having attained that activity; poised above whatsoever within the Intellectual is less than the Supreme: yet, there comes the moment of descent from intellection to reasoning, and after that sojourn in the divine, I ask myself how it happens that I can now be descending, and how did the soul ever enter into my body, the soul which, even within the body, is the high thing it has shown itself to be.

Heraclitus, who urges the examination of this matter, tells of compulsory alternation from contrary to contrary, speaks of ascent and descent, says that "change reposes," and that "it is weariness to keep toiling at the same things and always beginning again"; but he seems to teach by metaphor, not concerning himself about making his doctrine clear to us, probably with the idea that it is for us to seek within ourselves as he sought for himself and found.

Empedocles- where he says that it is law for faulty souls to descend to this sphere, and that he himself was here because he turned a deserter, wandered from God, in slavery to a raving discord- reveals neither more nor less than Pythagoras and his school seem to me to convey on this as on many other matters; but in his case, versification has some part in the obscurity.

We have to fall back on the illustrious Plato, who uttered many noble sayings about the soul, and has in many places dwelt upon its entry into body so that we may well hope to get some light from him.

What do we learn from this philosopher?

We will not find him so consistent throughout that it is easy to discover his mind.

Everywhere, no doubt, he expresses contempt for all that is of sense, blames the commerce of the soul with body as an enchainment, an entombment, and upholds as a

great truth the saying of the Mysteries that the soul is here a prisoner. In the Cavern of Plato and in the Cave of Empedocles, I discern this universe, where the breaking of the fetters and the ascent from the depths are figures of the wayfaring toward the Intellectual Realm.

In the Phaedrus he makes a failing of the wings the cause of the entry to this realm: and there are Periods which send back the soul after it has risen; there are judgements and lots and fates and necessities driving other souls down to this order.

In all these explanations, he finds guilt in the arrival of the soul at body, But treating, in the Timaeus, of our universe he exalts the kosmos and entitles it a blessed god, and holds that the soul was given by the goodness of the creator to the end that the total of things might be possessed of intellect, for thus intellectual it was planned to be, and thus it cannot be except through soul. There is a reason, then, why the soul of this All should be sent into it from God: in the same way the soul of each single one of us is sent, that the universe may be complete; it was necessary that all beings of the Intellectual should be tallied by just so many forms of living creatures here in the realm of sense.

2. Enquiring, then, of Plato as to our own soul, we find ourselves forced to enquire into the nature of soul in general- to discover what there can be in its character to bring it into partnership with body, and, again, what this kosmos must be in which, willing unwilling or in any way at all, soul has its activity.

We have to face also the question as to whether the Creator has planned well or ill..... like our souls, which it may be, are such that governing their inferior, the body, they must sink deeper and deeper into it if they are to control it.

No doubt the individual body- though in all cases appropriately placed within the universe- is of itself in a state of dissolution, always on the way to its natural terminus, demanding much irksome forethought to save it from every kind of outside assailant, always gripped by need, requiring every help against constant difficulty: but the body inhabited by the World-Soul- complete, competent, self-sufficing, exposed to nothing contrary to its nature- this needs no more than a brief word of command, while the governing soul is undeviatingly what its nature makes it wish to be, and, amenable neither to loss nor to addition, knows neither desire nor distress.

This is how we come to read that our soul, entering into association with that complete soul and itself thus made perfect, walks the lofty ranges, administering the entire kosmos, and that as long as it does not secede and is neither inbound to body nor held in any sort of servitude, so long it tranquilly bears its part in the governance of the All, exactly like the world-soul itself; for in fact it suffers no hurt whatever by furnishing body with the power to existence, since not every form of care for the inferior need wrest the providing soul from its own sure standing in the highest.

The soul's care for the universe takes two forms: there is the supervising of the entire system, brought to order by deedless command in a kindly presidency, and there is that

over the individual, implying direct action, the hand to the task, one might say, in immediate contact: in the second kind of care the agent absorbs much of the nature of its object.

Now in its comprehensive government of the heavenly system, the soul's method is that of an unbroken transcendence in its highest phases, with penetration by its lower power: at this, God can no longer be charged with lowering the All-Soul, which has not been deprived of its natural standing and from eternity possesses and will unchangeably possess that rank and habit which could never have been intruded upon it against the course of nature but must be its characteristic quality, neither failing ever nor ever beginning.

Where we read that the souls or stars stand to their bodily forms as the All to the material forms within it- for these starry bodies are declared to be members of the soul's circuit- we are given to understand that the star-souls also enjoy the blissful condition of transcendence and immunity that becomes them.

And so we might expect: commerce with the body is repudiated for two only reasons, as hindering the soul's intellectual act and as filling with pleasure, desire, pain; but neither of these misfortunes can befall a soul which has never deeply penetrated into the body, is not a slave but a sovereign ruling a body of such an order as to have no need and no shortcoming and therefore to give ground for neither desire nor fear.

There is no reason why it should be expectant of evil with regard to such a body nor is there any such preoccupied concern, bringing about a veritable descent, as to withdraw it from its noblest and most blessed vision; it remains always intent upon the Supreme, and its governance of this universe is effected by a power not calling upon act.

3. The Human Soul, next;

Everywhere we hear of it as in bitter and miserable duration in body, a victim to troubles and desires and fears and all forms of evil, the body its prison or its tomb, the kosmos its cave or cavern.

Now this does not clash with the first theory [that of the impassivity of soul as in the All]; for the descent of the human Soul has not been due to the same causes [as that of the All-Soul.]

All that is Intellectual-Principle has its being- whole and all- in the place of Intellection, what we call the Intellectual Kosmos: but there exist, too, the intellectual powers included in its being, and the separate intelligences- for the Intellectual-Principle is not merely one; it is one and many. In the same way there must be both many souls and one, the one being the source of the differing many just as from one genus there rise various species, better and worse, some of the more intellectual order, others less effectively so.

In the Intellectual-Principle a distinction is to be made: there is the Intellectual-Principle

itself, which like some huge living organism contains potentially all the other forms; and there are the forms thus potentially included now realized as individuals. We may think of it as a city which itself has soul and life, and includes, also, other forms of life; the living city is the more perfect and powerful, but those lesser forms, in spite of all, share in the one same living quality: or, another illustration, from fire, the universal, proceed both the great fire and the minor fires; yet all have the one common essence, that of fire the universal, or, more exactly, participate in that from which the essence of the universal fire proceeds.

No doubt the task of the soul, in its more emphatically reasoning phase, is intellection: but it must have another as well, or it would be undistinguishable from the Intellectual-Principle. To its quality of being intellective it adds the quality by which it attains its particular manner of being: remaining, therefore, an Intellectual-Principle, it has thenceforth its own task too, as everything must that exists among real beings.

It looks towards its higher and has intellection; towards itself and conserves its peculiar being; towards its lower and orders, administers, governs.

The total of things could not have remained stationary in the Intellectual Kosmos, once there was the possibility of continuous variety, of beings inferior but as necessarily existent as their superiors.

4. So it is with the individual souls; the appetite for the divine Intellect urges them to return to their source, but they have, too, a power apt to administration in this lower sphere; they may be compared to the light attached upwards to the sun, but not grudging its presidency to what lies beneath it. In the Intellectual, then, they remain with soul-entire, and are immune from care and trouble; in the heavenly sphere, absorbed in the soul-entire, they are administrators with it just as kings, associated with the supreme ruler and governing with him, do not descend from their kingly stations: the souls indeed [as distinguished from the kosmos] are thus far in the one place with their overlord; but there comes a stage at which they descend from the universal to become partial and self-centred; in a weary desire of standing apart they find their way, each to a place of its very own. This state long maintained, the soul is a deserter from the All; its differentiation has severed it; its vision is no longer set in the Intellectual; it is a partial thing, isolated, weakened, full of care, intent upon the fragment; severed from the whole, it nestles in one form of being; for this, it abandons all else, entering into and caring for only the one, for a thing buffeted about by a worldful of things: thus it has drifted away from the universal and, by an actual presence, it administers the particular; it is caught into contact now, and tends to the outer to which it has become present and into whose inner depths it henceforth sinks far.

With this comes what is known as the casting of the wings, the enchaining in body: the soul has lost that innocence of conducting the higher which it knew when it stood with the All-Soul, that earlier state to which all its interest would bid it hasten back.

It has fallen: it is at the chain: debarred from expressing itself now through its intellectual phase, it operates through sense, it is a captive; this is the burial, the encavernment, of

the Soul.

But in spite of all it has, for ever, something transcendent: by a conversion towards the intellectual act, it is loosed from the shackles and soars- when only it makes its memories the starting point of a new vision of essential being. Souls that take this way have place in both spheres, living of necessity the life there and the life here by turns, the upper life reigning in those able to consort more continuously with the divine Intellect, the lower dominant where character or circumstances are less favourable.

All this is indicated by Plato, without emphasis, where he distinguishes those of the second mixing-bowl, describes them as “parts,” and goes on to say that, having in this way become partial, they must of necessity experience birth.

Of course, where he speaks of God sowing them, he is to be understood as when he tells of God speaking and delivering orations; what is rooted in the nature of the All is figuratively treated as coming into being by generation and creation: stage and sequence are transferred, for clarity of exposition, to things whose being and definite form are eternal.

5. It is possible to reconcile all these apparent contradictions- the divine sowing to birth, as opposed to a voluntary descent aiming at the completion of the universe; the judgement and the cave; necessity and free choice- in fact the necessity includes the choice-embodiment as an evil; the Empedoclean teaching of a flight from God, a wandering away, a sin bringing its punishment; the “solace by flight” of Heraclitus; in a word a voluntary descent which is also voluntary.

All degeneration is no doubt involuntary, yet when it has been brought about by an inherent tendency, that submission to the inferior may be described as the penalty of an act.

On the other hand these experiences and actions are determined by an external law of nature, and they are due to the movement of a being which in abandoning its superior is running out to serve the needs of another: hence there is no inconsistency or untruth in saying that the soul is sent down by God; final results are always to be referred to the starting point even across many intervening stages.

Still there is a twofold flaw: the first lies in the motive of the Soul's descent [its audacity, its Tolma], and the second in the evil it does when actually here: the first is punished by what the soul has suffered by its descent: for the faults committed here, the lesser penalty is to enter into body after body- and soon to return- by judgement according to desert, the word judgement indicating a divine ordinance; but any outrageous form of ill-doing incurs a proportionately greater punishment administered under the surveillance of chastising daimons.

Thus, in sum, the soul, a divine being and a dweller in the loftier realms, has entered body; it is a god, a later phase of the divine: but, under stress of its powers and of its tendency to bring order to its next lower, it penetrates to this sphere in a voluntary

plunge: if it turns back quickly, all is well; it will have taken no hurt by acquiring the knowledge of evil and coming to understand what sin is, by bringing its forces into manifest play, by exhibiting those activities and productions which, remaining merely potential in the unembodied, might as well never have been even there, if destined never to come into actuality, so that the soul itself would never have known that suppressed and inhibited total.

The act reveals the power, a power hidden, and we might almost say obliterated or nonexistent, unless at some moment it became effective: in the world as it is, the richness of the outer stirs us all to the wonder of the inner whose greatness is displayed in acts so splendid.

6. Something besides a unity there must be or all would be indiscernibly buried, shapeless within that unbroken whole: none of the real beings [of the Intellectual Kosmos] would exist if that unity remained at halt within itself: the plurality of these beings, offspring of the unity, could not exist without their own nexts taking the outward path; these are the beings holding the rank of souls.

In the same way the outgoing process could not end with the souls, their issue stifled: every Kind must produce its next; it must unfold from some concentrated central principle as from a seed, and so advance to its term in the varied forms of sense. The prior in its being will remain unalterably in the native seat; but there is the lower phase, begotten to it by an ineffable faculty of its being, native to soul as it exists in the Supreme.

To this power we cannot impute any halt, any limit of jealous grudging; it must move for ever outward until the universe stands accomplished to the ultimate possibility. All, thus, is produced by an inexhaustible power giving its gift to the universe, no part of which it can endure to see without some share in its being.

There is, besides, no principle that can prevent anything from partaking, to the extent of its own individual receptivity in the Nature of Good. If therefore Matter has always existed, that existence is enough to ensure its participation in the being which, according to each receptivity, communicates the supreme good universally: if on the contrary, Matter has come into being as a necessary sequence of the causes preceding it, that origin would similarly prevent it standing apart from the scheme as though it were out of reach of the principle to whose grace it owes its existence.

In sum: The loveliness that is in the sense-realm is an index of the nobleness of the Intellectual sphere, displaying its power and its goodness alike: and all things are for ever linked; the one order Intellectual in its being, the other of sense; one self-existent, the other eternally taking its being by participation in that first, and to the full of its power reproducing the Intellectual nature.

7. The Kind, then, with which we are dealing is twofold, the Intellectual against the sensible: better for the soul to dwell in the Intellectual, but, given its proper nature, it is under compulsion to participate in the sense-realm also. There is no grievance in its not

being, through and through, the highest; it holds mid-rank among the authentic existences, being of divine station but at the lowest extreme of the Intellectual and skirting the sense-known nature; thus, while it communicates to this realm something of its own store, it absorbs in turn whenever- instead of employing in its government only its safeguarded phase- it plunges in an excessive zeal to the very midst of its chosen sphere; then it abandons its status as whole soul with whole soul, though even thus it is always able to recover itself by turning to account the experience of what it has seen and suffered here, learning, so, the greatness of rest in the Supreme, and more clearly discerning the finer things by comparison with what is almost their direct antithesis. Where the faculty is incapable of knowing without contact, the experience of evil brings the dearer perception of Good.

The outgoing that takes place in the Intellectual-Principle is a descent to its own downward ultimate: it cannot be a movement to the transcendent; operating necessarily outwards from itself, wherein it may not stay inclosed, the need and law of Nature bring it to its extreme term, to soul- to which it entrusts all the later stages of being while itself turns back on its course.

The soul's operation is similar: its next lower act is this universe: its immediate higher is the contemplation of the Authentic Existences. To individual souls such divine operation takes place only at one of their phases and by a temporal process when from the lower in which they reside they turn towards the noblest; but that soul, which we know as the All-Soul, has never entered the lower activity, but, immune from evil, has the property of knowing its lower by inspection, while it still cleaves continuously to the beings above itself; thus its double task becomes possible; it takes thence and, since as soul it cannot escape touching this sphere, it gives hither.

8. And- if it is desirable to venture the more definite statement of a personal conviction clashing with the general view- even our human soul has not sunk entire; something of it is continuously in the Intellectual Realm, though if that part, which is in this sphere of sense, hold the mastery, or rather be mastered here and troubled, it keeps us blind to what the upper phase holds in contemplation.

The object of the Intellectual Act comes within our ken only when it reaches downward to the level of sensation: for not all that occurs at any part of the soul is immediately known to us; a thing must, for that knowledge, be present to the total soul; thus desire locked up within the desiring faculty remains unknown except when we make it fully ours by the central faculty of perception, or by the individual choice or by both at once. Once more, every soul has something of the lower on the body side and something of the higher on the side of the Intellectual-Principle.

The Soul of the All, as an entirety, governs the universe through that part of it which leans to the body side, but since it does not exercise a will based on calculation as we do- but proceeds by purely intellectual act as in the execution of an artistic conception- its ministrance is that of a labourless overpoising, only its lowest phase being active upon the universe it embellishes.

The souls that have gone into division and become appropriated to some thing partial have also their transcendent phase, but are preoccupied by sensation, and in the mere fact of exercising perception they take in much that clashes with their nature and brings distress and trouble since the object of their concern is partial, deficient, exposed to many alien influences, filled with desires of its own and taking its pleasure, that pleasure which is its lure.

But there is always the other, that which finds no savour in passing pleasure, but holds its own even way.

NINTH TRACTATE.

ARE ALL SOULS ONE?.

1. That the Soul of every individual is one thing we deduce from the fact that it is present entire at every point of the body- the sign of veritable unity- not some part of it here and another part there. In all sensitive beings the sensitive soul is an omnipresent unity, and so in the forms of vegetal life the vegetal soul is entire at each several point throughout the organism.

Now are we to hold similarly that your soul and mine and all are one, and that the same thing is true of the universe, the soul in all the several forms of life being one soul, not parcelled out in separate items, but an omnipresent identity?

If the soul in me is a unity, why need that in the universe be otherwise seeing that there is no longer any question of bulk or body? And if that, too, is one soul and yours, and mine, belongs to it, then yours and mine must also be one: and if, again, the soul of the universe and mine depend from one soul, once more all must be one.

What then in itself is this one soul?

First we must assure ourselves of the possibility of all souls being one as that of any given individual is.

It must, no doubt, seem strange that my soul and that of any and everybody else should be one thing only: it might mean my feelings being felt by someone else, my goodness another's too, my desire, his desire, all our experience shared with each other and with the (one-souled) universe, so that the very universe itself would feel whatever I felt.

Besides how are we to reconcile this unity with the distinction of reasoning soul and unreasoning, animal soul and vegetal?

Yet if we reject that unity, the universe itself ceases to be one thing and souls can no longer be included under any one principle.

2. Now to begin with, the unity of soul, mine and another's, is not enough to make the two totals of soul and body identical. An identical thing in different recipients will have

different experiences; the identity Man, in me as I move and you at rest, moves in me and is stationary in you: there is nothing stranger, nothing impossible, in any other form of identity between you and me; nor would it entail the transference of my emotion to any outside point: when in any one body a hand is in pain, the distress is felt not in the other but in the hand as represented in the centralizing unity.

In order that my feelings should of necessity be yours, the unity would have to be corporeal: only if the two recipient bodies made one, would the souls feel as one.

We must keep in mind, moreover, that many things that happen even in one same body escape the notice of the entire being, especially when the bulk is large: thus in huge sea-beasts, it is said, the animal as a whole will be quite unaffected by some membral accident too slight to traverse the organism.

Thus unity in the subject of any experience does not imply that the resultant sensation will be necessarily felt with any force upon the entire being and at every point of it: some transmission of the experience may be expected, and is indeed undeniable, but a full impression on the sense there need not be.

That one identical soul should be virtuous in me and vicious in someone else is not strange: it is only saying that an identical thing may be active here and inactive there.

We are not asserting the unity of soul in the sense of a complete negation of multiplicity- only of the Supreme can that be affirmed- we are thinking of soul as simultaneously one and many, participant in the nature divided in body, but at the same time a unity by virtue of belonging to that Order which suffers no division.

In myself some experience occurring in a part of the body may take no effect upon the entire man but anything occurring in the higher reaches would tell upon the partial: in the same way any influx from the All upon the individual will have manifest effect since the points of sympathetic contact are numerous- but as to any operation from ourselves upon the All there can be no certainty.

3. Yet, looking at another set of facts, reflection tells us that we are in sympathetic relation to each other, suffering, overcome, at the sight of pain, naturally drawn to forming attachments; and all this can be due only to some unity among us.

Again, if spells and other forms of magic are efficient even at a distance to attract us into sympathetic relations, the agency can be no other than the one soul.

A quiet word induces changes in a remote object, and makes itself heard at vast distances- proof of the oneness of all things within the one soul.

But how reconcile this unity with the existence of a reasoning soul, an unreasoning, even a vegetal soul?

[It is a question of powers]: the indivisible phase is classed as reasoning because it is

not in division among bodies, but there is the later phase, divided among bodies, but still one thing and distinct only so as to secure sense-perception throughout; this is to be classed as yet another power; and there is the forming and making phase which again is a power. But a variety of powers does not conflict with unity; seed contains many powers and yet it is one thing, and from that unity rises, again, a variety which is also a unity.

But why are not all the powers of this unity present everywhere?

The answer is that even in the case of the individual soul described, similarly, as permeating its body, sensation is not equally present in all the parts, reason does not operate at every point, the principle of growth is at work where there is no sensation- and yet all these powers join in the one soul when the body is laid aside.

The nourishing faculty as dependent from the All belongs also to the All-Soul: why then does it not come equally from ours?

Because what is nourished by the action of this power is a member of the All, which itself has sensation passively; but the perception, which is an intellectual judgement, is individual and has no need to create what already exists, though it would have done so had the power not been previously included, of necessity, in the nature of the All.

4. These reflections should show that there is nothing strange in that reduction of all souls to one. But it is still necessary to enquire into the mode and conditions of the unity.

Is it the unity of origin in a unity? And if so, is the one divided or does it remain entire and yet produce variety? and how can an essential being, while remaining its one self, bring forth others?

Invoking God to become our helper, let us assert, that the very existence of many souls makes certain that there is first one from which the many rise.

Let us suppose, even, the first soul to be corporeal.

Then [by the nature of body] the many souls could result only from the splitting up of that entity, each an entirely different substance: if this body-soul be uniform in kind, each of the resultant souls must be of the one kind; they will all carry the one Form undividedly and will differ only in their volumes. Now, if their being souls depended upon their volumes they would be distinct; but if it is ideal-form that makes them souls, then all are, in virtue of this Idea, one.

But this is simply saying that there is one identical soul dispersed among many bodies, and that, preceding this, there is yet another not thus dispersed, the source of the soul in dispersion which may be thought of as a widely repeated image of the soul in unity- much as a multitude of seals bear the impression of one ring. By that first mode the soul is a unit broken up into a variety of points: in the second mode it is incorporeal. Similarly

if the soul were a condition or modification of body, we could not wonder that this quality- this one thing from one source- should be present in many objects. The same reasoning would apply if soul were an effect [or manifestation] of the Conjoint.

We, of course, hold it to be bodiless, an essential existence.

5. How then can a multitude of essential beings be really one?

Obviously either the one essence will be entire in all, or the many will rise from a one which remains unaltered and yet includes the one- many in virtue of giving itself, without self-abandonment, to its own multiplication.

It is competent thus to give and remain, because while it penetrates all things it can never itself be sundered: this is an identity in variety.

There is no reason for dismissing this explanation: we may think of a science with its constituents standing as one total, the source of all those various elements: again, there is the seed, a whole, producing those new parts in which it comes to its division; each of the new growths is a whole while the whole remains undiminished: only the material element is under the mode of part, and all the multiplicity remains an entire identity still.

It may be objected that in the case of science the constituents are not each the whole.

But even in the science, while the constituent selected for handling to meet a particular need is present actually and takes the lead, still all the other constituents accompany it in a potential presence, so that the whole is in every part: only in this sense [of particular attention] is the whole science distinguished from the part: all, we may say, is here simultaneously effected: each part is at your disposal as you choose to take it; the part invites the immediate interest, but its value consists in its approach to the whole.

The detail cannot be considered as something separate from the entire body of speculation: so treated it would have no technical or scientific value; it would be childish divagation. The one detail, when it is a matter of science, potentially includes all. Grasping one such constituent of his science, the expert deduces the rest by force of sequence.

[As a further illustration of unity in plurality] the geometrician, in his analysis, shows that the single proposition includes all the items that go to constitute it and all the propositions which can be developed from it.

It is our feebleness that leads to doubt in these matters; the body obscures the truth, but There all stands out clear and separate.

First Tractate

The Three Initial Hypostases 1. What can it be that has brought the souls to forget the father, God, and, though members of the Divine and entirely of that world, to ignore at once themselves and It?

The evil that has overtaken them has its source in self-will, in the entry into the sphere of process, and in the primal differentiation with the desire for self ownership. They conceived a pleasure in this freedom and largely indulged their own motion; thus they were hurried down the wrong path, and in the end, drifting further and further, they came to lose even the thought of their origin in the Divine. A child wrenched young from home and brought up during many years at a distance will fail in knowledge of its father and of itself: the souls, in the same way, no longer discern either the divinity or their own nature; ignorance of their rank brings self-depreciation; they misplace their respect, honouring everything more than themselves; all their awe and admiration is for the alien, and, clinging to this, they have broken apart, as far as a soul may, and they make light of what they have deserted; their regard for the mundane and their disregard of themselves bring about their utter ignoring of the divine.

Admiring pursuit of the external is a confession of inferiority; and nothing thus holding itself inferior to things that rise and perish, nothing counting itself less honourable and less enduring than all else it admires could ever form any notion of either the nature or

the power of God.

A double discipline must be applied if human beings in this pass are to be reclaimed, and brought back to their origins, lifted once more towards the Supreme and One and First.

There is the method, which we amply exhibit elsewhere, declaring the dishonour of the objects which the Soul holds here in honour; the second teaches or recalls to the soul its race and worth; this latter is the leading truth, and, clearly brought out, is the evidence of the other.

It must occupy us now for it bears closely upon our enquiry to which it is the natural preliminary: the seeker is soul and it must start from a true notion of the nature and quality by which soul may undertake the search; it must study itself in order to learn whether it has the faculty for the enquiry, the eye for the object proposed, whether in fact we ought to seek; for if the object is alien the search must be futile, while if there is relationship the solution of our problem is at once desirable and possible.

2. Let every soul recall, then, at the outset the truth that soul is the author of all living things, that it has breathed the life into them all, whatever is nourished by earth and sea, all the creatures of the air, the divine stars in the sky; it is the maker of the sun; itself formed and ordered this vast heaven and conducts all that rhythmic motion; and it is a principle distinct from all these to which it gives law and movement and life, and it must of necessity be more honourable than they, for they gather or dissolve as soul brings them life or abandons them, but soul, since it never can abandon itself, is of eternal being.

How life was purveyed to the universe of things and to the separate beings in it may be thus conceived:

That great soul must stand pictured before another soul, one not mean, a soul that has become worthy to look, emancipate from the lure, from all that binds its fellows in bewitchment, holding itself in quietude. Let not merely the enveloping body be at peace, body's turmoil stilled, but all that lies around, earth at peace, and sea at peace, and air and the very heavens. Into that heaven, all at rest, let the great soul be conceived to roll inward at every point, penetrating, permeating, from all sides pouring in its light. As the rays of the sun throwing their brilliance upon a lowering cloud make it gleam all gold, so the soul entering the material expanse of the heavens has given life, has given immortality: what was abject it has lifted up; and the heavenly system, moved now in endless motion by the soul that leads it in wisdom, has become a living and a blessed thing; the soul domiciled within, it takes worth where, before the soul, it was stark body-clay and water- or, rather, the blankness of Matter, the absence of Being, and, as an author says, "the execration of the Gods."

The Soul's nature and power will be brought out more clearly, more brilliantly, if we consider next how it envelops the heavenly system and guides all to its purposes: for it has bestowed itself upon all that huge expanse so that every interval, small and great

alike, all has been ensouled.

The material body is made up of parts, each holding its own place, some in mutual opposition and others variously interdependent; the soul is in no such condition; it is not whittled down so that life tells of a part of the soul and springs where some such separate portion impinges; each separate life lives by the soul entire, omnipresent in the likeness of the engendering father, entire in unity and entire in diffused variety. By the power of the soul the manifold and diverse heavenly system is a unit: through soul this universe is a God: and the sun is a God because it is ensouled; so too the stars: and whatsoever we ourselves may be, it is all in virtue of soul; for "dead is viler than dung."

This, by which the gods are divine, must be the oldest God of them all: and our own soul is of that same Ideal nature, so that to consider it, purified, freed from all accretion, is to recognise in ourselves that same value which we have found soul to be, honourable above all that is bodily. For what is body but earth, and, taking fire itself, what [but soul] is its burning power? So it is with all the compounds of earth and fire, even with water and air added to them?

If, then, it is the presence of soul that brings worth, how can a man slight himself and run after other things? You honour the Soul elsewhere; honour then yourself.

3. The Soul once seen to be thus precious, thus divine, you may hold the faith that by its possession you are already nearing God: in the strength of this power make upwards towards Him: at no great distance you must attain: there is not much between.

But over this divine, there is still a diviner: grasp the upward neighbour of the soul, its prior and source.

Soul, for all the worth we have shown to belong to it, is yet a secondary, an image of the Intellectual-Principle: reason uttered is an image of the reason stored within the soul, and in the same way soul is an utterance of the Intellectual-Principle: it is even the total of its activity, the entire stream of life sent forth by that Principle to the production of further being; it is the forthgoing heat of a fire which has also heat essentially inherent. But within the Supreme we must see energy not as an overflow but in the double aspect of integral inherence with the establishment of a new being. Sprung, in other words, from the Intellectual-Principle, Soul is intellective, but with an intellection operation by the method of reasonings: for its perfecting it must look to that Divine Mind, which may be thought of as a father watching over the development of his child born imperfect in comparison with himself.

Thus its substantial existence comes from the Intellectual-Principle; and the Reason within it becomes Act in virtue of its contemplation of that prior; for its thought and act are its own intimate possession when it looks to the Supreme Intelligence; those only are soul-acts which are of this intellective nature and are determined by its own character; all that is less noble is foreign [traceable to Matter] and is accidental to the soul in the course of its peculiar task.

In two ways, then, the Intellectual-Principle enhances the divine quality of the soul, as father and as immanent presence; nothing separates them but the fact that they are not one and the same, that there is succession, that over against a recipient there stands the ideal-form received; but this recipient, Matter to the Supreme Intelligence, is also noble as being at once informed by divine intellect and uncompounded.

What the Intellectual-Principle must be is carried in the single word that Soul, itself so great, is still inferior.

4. But there is yet another way to this knowledge:

Admiring the world of sense as we look out upon its vastness and beauty and the order of its eternal march, thinking of the gods within it, seen and hidden, and the celestial spirits and all the life of animal and plant, let us mount to its archetype, to the yet more authentic sphere: there we are to contemplate all things as members of the Intellectual-eternal in their own right, vested with a self-springing consciousness and life- and, presiding over all these, the unsoiled Intelligence and the unapproachable wisdom.

That archetypal world is the true Golden Age, age of Kronos, who is the Intellectual-Principle as being the offspring or exuberance of God. For here is contained all that is immortal: nothing here but is Divine Mind; all is God; this is the place of every soul. Here is rest unbroken: for how can that seek change, in which all is well; what need that reach to, which holds all within itself; what increase can that desire, which stands utterly achieved? All its content, thus, is perfect, that itself may be perfect throughout, as holding nothing that is less than the divine, nothing that is less than intellective. Its knowing is not by search but by possession, its blessedness inherent, not acquired; for all belongs to it eternally and it holds the authentic Eternity imitated by Time which, circling round the Soul, makes towards the new thing and passes by the old. Soul deals with thing after thing- now Socrates; now a horse: always some one entity from among beings- but the Intellectual-Principle is all and therefore its entire content is simultaneously present in that identity: this is pure being in eternal actuality; nowhere is there any future, for every then is a now; nor is there any past, for nothing there has ever ceased to be; everything has taken its stand for ever, an identity well pleased, we might say, to be as it is; and everything, in that entire content, is Intellectual-Principle and Authentic Existence; and the total of all is Intellectual-Principle entire and Being entire. Intellectual-Principle by its intellective act establishes Being, which in turn, as the object of intellection, becomes the cause of intellection and of existence to the Intellectual-Principle- though, of course, there is another cause of intellection which is also a cause to Being, both rising in a source distinct from either.

Now while these two are coalescents, having their existence in common, and are never apart, still the unity they form is two-sided; there is Intellectual-Principle as against Being, the intellectual agent as against the object of intellection; we consider the intellective act and we have the Intellectual-Principle; we think of the object of that act and we have Being.

Such difference there must be if there is to be any intellection; but similarly there must

also be identity [since, in perfect knowing, subject and object are identical.]

Thus the Primals [the first “Categories”] are seen to be: Intellectual-Principle; Existence; Difference; Identity: we must include also Motion and Rest: Motion provides for the intellectual act, Rest preserves identity as Difference gives at once a Knower and a Known, for, failing this, all is one, and silent.

So too the objects of intellection [the ideal content of the Divine Mind]- identical in virtue of the self-concentration of the principle which is their common ground- must still be distinct each from another; this distinction constitutes Difference.

The Intellectual Kosmos thus a manifold, Number and Quantity arise: Quality is the specific character of each of these ideas which stand as the principles from which all else derives.

5. As a manifold, then, this God, the Intellectual-Principle, exists within the Soul here, the Soul which once for all stands linked a member of the divine, unless by a deliberate apostasy.

Bringing itself close to the divine Intellect, becoming, as it were, one with this, it seeks still further: What Being, now, has engendered this God, what is the Simplex preceding this multiple; what the cause at once of its existence and of its existing as a manifold; what the source of this Number, this Quantity?

Number, Quantity, is not primal: obviously before even duality, there must stand the unity.

The Dyad is a secondary; deriving from unity, it finds in unity the determinant needed by its native indetermination: once there is any determination, there is Number, in the sense, of course, of the real [the archetypal] Number. And the soul is such a number or quantity. For the Primals are not masses or magnitudes; all of that gross order is later, real only to the sense-thought; even in seed the effective reality is not the moist substance but the unseen- that is to say Number [as the determinant of individual being] and the Reason-Principle [of the product to be].

Thus by what we call the Number and the Dyad of that higher realm, we mean Reason Principles and the Intellectual-Principle: but while the Dyad is, as regards that sphere, undetermined- representing, as it were, the underly [or Matter] of The One- the later Number [or Quantity]- that which rises from the Dyad [Intellectual-Principle] and The One- is not Matter to the later existents but is their forming-Idea, for all of them take shape, so to speak, from the ideas rising within this. The determination of the Dyad is brought about partly from its object- The One- and partly from itself, as is the case with all vision in the act of sight: intellection [the Act of the Dyad] is vision occupied upon The One.

6. But how and what does the Intellectual-Principle see and, especially, how has it sprung from that which is to become the object of its vision?

The mind demands the existence of these Beings, but it is still in trouble over the problem endlessly debated by the most ancient philosophers: from such a unity as we have declared The One to be, how does anything at all come into substantial existence, any multiplicity, dyad, or number? Why has the Primal not remained self-gathered so that there be none of this profusion of the manifold which we observe in existence and yet are compelled to trace to that absolute unity?

In venturing an answer, we first invoke God Himself, not in loud word but in that way of prayer which is always within our power, leaning in soul towards Him by aspiration, alone towards the alone. But if we seek the vision of that great Being within the Inner Sanctuary- self-gathered, tranquilly remote above all else- we begin by considering the images stationed at the outer precincts, or, more exactly to the moment, the first image that appears. How the Divine Mind comes into being must be explained:

Everything moving has necessarily an object towards which it advances; but since the Supreme can have no such object, we may not ascribe motion to it: anything that comes into being after it can be produced only as a consequence of its unfailing self-intention; and, of course, we dare not talk of generation in time, dealing as we are with eternal Beings: where we speak of origin in such reference, it is in the sense, merely, of cause and subordination: origin from the Supreme must not be taken to imply any movement in it: that would make the Being resulting from the movement not a second principle but a third: the Movement would be the second hypostasis.

Given this immobility in the Supreme, it can neither have yielded assent nor uttered decree nor stirred in any way towards the existence of a secondary.

What happened then? What are we to conceive as rising in the neighbourhood of that immobility?

It must be a circumradiation- produced from the Supreme but from the Supreme unaltering- and may be compared to the brilliant light encircling the sun and ceaselessly generated from that unchanging substance.

All existences, as long as they retain their character, produce- about themselves, from their essence, in virtue of the power which must be in them- some necessary, outward-facing hypostasis continuously attached to them and representing in image the engendering archetypes: thus fire gives out its heat; snow is cold not merely to itself; fragrant substances are a notable instance; for, as long as they last, something is diffused from them and perceived wherever they are present.

Again, all that is fully achieved engenders: therefore the eternally achieved engenders eternally an eternal being. At the same time, the offspring is always minor: what then are we to think of the All-Perfect but that it can produce nothing less than the very greatest that is later than itself. The greatest, later than the divine unity, must be the Divine Mind, and it must be the second of all existence, for it is that which sees The One on which alone it leans while the First has no need whatever of it. The offspring of the

prior to Divine Mind can be no other than that Mind itself and thus is the loftiest being in the universe, all else following upon it- the soul, for example, being an utterance and act of the Intellectual-Principle as that is an utterance and act of The One. But in soul the utterance is obscured, for soul is an image and must look to its own original: that Principle, on the contrary, looks to the First without mediation- thus becoming what it is- and has that vision not as from a distance but as the immediate next with nothing intervening, close to the One as Soul to it.

The offspring must seek and love the begetter; and especially so when begetter and begotten are alone in their sphere; when, in addition, the begetter is the highest good, the offspring [inevitably seeking its Good] is attached by a bond of sheer necessity, separated only in being distinct.

7. We must be more explicit:

The Intellectual-Principle stands as the image of The One, firstly because there is a certain necessity that the first should have its offspring, carrying onward much of its quality, in other words that there be something in its likeness as the sun's rays tell of the sun. Yet The One is not an Intellectual-Principle; how then does it engender an Intellectual-Principle?

Simply by the fact that in its self-quest it has vision: this very seeing is the Intellectual-Principle. Any perception of the external indicates either sensation or intellection, sensation symbolized by a line, intellection by a circle... [corrupt passage].

Of course the divisibility belonging to the circle does not apply to the Intellectual-Principle; all, there too, is a unity, though a unity which is the potentiality of all existence.

The items of this potentiality the divine intellection brings out, so to speak, from the unity and knows them in detail, as it must if it is to be an intellectual principle.

It has besides a consciousness, as it were, within itself of this same potentiality; it knows that it can of itself beget an hypostasis and can determine its own Being by the virtue emanating from its prior; it knows that its nature is in some sense a definite part of the content of that First; that it thence derives its essence, that its strength lies there and that its Being takes perfection as a derivative and a recipient from the First. It sees that, as a member of the realm of division and part, it receives life and intellection and all else it has and is, from the undivided and partless, since that First is no member of existence, but can be the source of all on condition only of being held down by no one distinctive shape but remaining the undeflected unity.

[(CORRUPT)- Thus it would be the entire universe but that...]

And so the First is not a thing among the things contained by the Intellectual-Principle though the source of all. In virtue of this source, things of the later order are essential beings; for from that fact there is determination; each has its form: what has being

cannot be envisaged as outside of limit; the nature must be held fast by boundary and fixity; though to the Intellectual Beings this fixity is no more than determination and form, the foundations of their substantial existence.

A being of this quality, like the Intellectual-Principle, must be felt to be worthy of the all-pure: it could not derive from any other than from the first principle of all; as it comes into existence, all other beings must be simultaneously engendered- all the beauty of the Ideas, all the Gods of the Intellectual realm. And it still remains pregnant with this offspring; for it has, so to speak, drawn all within itself again, holding them lest they fall away towards Matter to be "brought up in the House of Rhea" [in the realm of flux]. This is the meaning hidden in the Mysteries, and in the Myths of the gods: Kronos, as the wisest, exists before Zeus; he must absorb his offspring that, full within himself, he may be also an Intellectual-Principle manifest in some product of his plenty; afterwards, the myth proceeds, Kronos engenders Zeus, who already exists as the [necessary and eternal] outcome of the plenty there; in other words the offspring of the Divine Intellect, perfect within itself, is Soul [the life-principle carrying forward the Ideas in the Divine Mind].

Now, even in the Divine the engendered could not be the very highest; it must be a lesser, an image; it will be undetermined, as the Divine is, but will receive determination, and, so to speak, its shaping idea, from the progenitor.

Yet any offspring of the Intellectual-Principle must be a Reason-Principle; the thought of the Divine Mind must be a substantial existence: such then is that [Soul] which circles about the Divine Mind, its light, its image inseparably attached to it: on the upper level united with it, filled from it, enjoying it, participant in its nature, intellective with it, but on the lower level in contact with the realm beneath itself, or, rather, generating in turn an offspring which must lie beneath; of this lower we will treat later; so far we deal still with the Divine.

8. This is the explanation of Plato's Triplicity, in the passage where he names as the Primals the Beings gathered about the King of All, and establishes a Secondary containing the Secondaries, and a Third containing the Tertiaries.

He teaches, also, that there is an author of the Cause, that is of the Intellectual-Principle, which to him is the Creator who made the Soul, as he tells us, in the famous mixing bowl. This author of the causing principle, of the divine mind, is to him the Good, that which transcends the Intellectual-Principle and transcends Being: often too he uses the term "The Idea" to indicate Being and the Divine Mind. Thus Plato knows the order of generation- from the Good, the Intellectual-Principle; from the Intellectual-Principle, the Soul. These teachings are, therefore, no novelties, no inventions of today, but long since stated, if not stressed; our doctrine here is the explanation of an earlier and can show the antiquity of these opinions on the testimony of Plato himself.

Earlier, Parmenides made some approach to the doctrine in identifying Being with Intellectual-Principle while separating Real Being from the realm of sense.

“Knowing and Being are one thing he says, and this unity is to him motionless in spite of the intellection he attributes to it: to preserve its unchanging identity he excludes all bodily movement from it; and he compares it to a huge sphere in that it holds and envelops all existence and that its intellection is not an outgoing act but internal. Still, with all his affirmation of unity, his own writings lay him open to the reproach that his unity turns out to be a multiplicity.

The Platonic Parmenides is more exact; the distinction is made between the Primal One, a strictly pure Unity, and a secondary One which is a One-Many and a third which is a One-and-many; thus he too is in accordance with our thesis of the Three Kinds.

9. Anaxagoras, again, in his assertion of a Mind pure and unmixed, affirms a simplex First and a sundered One, though writing long ago he failed in precision.

Heraclitus, with his sense of bodily forms as things of ceaseless process and passage, knows the One as eternal and intellectual.

In Empedocles, similarly, we have a dividing principle, “Strife,” set against “Friendship”- which is The One and is to him bodiless, while the elements represent Matter.

Later there is Aristotle; he begins by making the First transcendent and intellective but cancels that primacy by supposing it to have self-intellection. Further he affirms a multitude of other intellective beings- as many indeed as there are orbs in the heavens; one such principle as in- over to every orb- and thus his account of the Intellectual Realm differs from Plato's and, failing reason, he brings in necessity; though whatever reasons he had alleged there would always have been the objection that it would be more reasonable that all the spheres, as contributory to one system, should look to a unity, to the First.

We are obliged also to ask whether to Aristotle's mind all Intellectual Beings spring from one, and that one their First; or whether the Principles in the Intellectual are many.

If from one, then clearly the Intellectual system will be analogous to that of the universe of sense-sphere encircling sphere, with one, the outermost, dominating all- the First [in the Intellectual] will envelop the entire scheme and will be an Intellectual [or Archetypal] Kosmos; and as in our universe the spheres are not empty but the first sphere is thick with stars and none without them, so, in the Intellectual Kosmos, those principles of Movement will envelop a multitude of Beings, and that world will be the realm of the greater reality.

If on the contrary each is a principle, then the effective powers become a matter of chance; under what compulsion are they to hold together and act with one mind towards that work of unity, the harmony of the entire heavenly system? Again what can make it necessary that the material bodies of the heavenly system be equal in number to the Intellectual moving principles, and how can these incorporeal Beings be numerically many when there is no Matter to serve as the basis of difference?

For these reasons the ancient philosophers that ranged themselves most closely to the school of Pythagoras and of his later followers and to that of Pherekudes, have insisted upon this Nature, some developing the subject in their writings while others treated of it merely in unwritten discourses, some no doubt ignoring it entirely.

10. We have shown the inevitability of certain convictions as to the scheme of things:

There exists a Principle which transcends Being; this is The One, whose nature we have sought to establish in so far as such matters lend themselves to proof. Upon The One follows immediately the Principle which is at once Being and the Intellectual-Principle. Third comes the Principle, Soul.

Now just as these three exist for the system of Nature, so, we must hold, they exist for ourselves. I am not speaking of the material order- all that is separable- but of what lies beyond the sense realm in the same way as the Primals are beyond all the heavens; I mean the corresponding aspect of man, what Plato calls the Interior Man.

Thus our soul, too, is a divine thing, belonging to another order than sense; such is all that holds the rank of soul, but [above the life-principle] there is the soul perfected as containing Intellectual-Principle with its double phase, reasoning and giving the power to reason. The reasoning phase of the soul, needing no bodily organ for its thinking but maintaining, in purity, its distinctive Act that its thought may be uncontaminated- this we cannot err in placing, separate and not mingled into body, within the first Intellectual. We may not seek any point of space in which to seat it; it must be set outside of all space: its distinct quality, its separateness, its immateriality, demand that it be a thing alone, untouched by all of the bodily order. This is why we read of the universe that the Demiurge cast the soul around it from without- understand that phase of soul which is permanently seated in the Intellectual- and of ourselves that the charioteer's head reaches upwards towards the heights.

The admonition to sever soul from body is not, of course, to be understood spatially- that separation stands made in Nature- the reference is to holding our rank, to use of our thinking, to an attitude of alienation from the body in the effort to lead up and attach to the over-world, equally with the other, that phase of soul seated here and, alone, having to do with body, creating, moulding, spending its care upon it.

11. Since there is a Soul which reasons upon the right and good- for reasoning is an enquiry into the rightness and goodness of this rather than that- there must exist some permanent Right, the source and foundation of this reasoning in our soul; how, else, could any such discussion be held? Further, since the soul's attention to these matters is intermittent, there must be within us an Intellectual-Principle acquainted with that Right not by momentary act but in permanent possession. Similarly there must be also the principle of this principle, its cause, God. This Highest cannot be divided and allotted, must remain intangible but not bound to space, it may be present at many points, wheresoever there is anything capable of accepting one of its manifestations; thus a centre is an independent unity; everything within the circle has its term at the

centre; and to the centre the radii bring each their own. Within our nature is such a centre by which we grasp and are linked and held; and those of us are firmly in the Supreme whose collective tendency is There.

12. Possessed of such powers, how does it happen that we do not lay hold of them, but for the most part, let these high activities go idle- some, even, of us never bringing them in any degree to effect?

The answer is that all the Divine Beings are unceasingly about their own act, the Intellectual-Principle and its Prior always self-intent; and so, too, the soul maintains its unfailing movement; for not all that passes in the soul is, by that fact, perceptible; we know just as much as impinges upon the faculty of sense. Any activity not transmitted to the sensitive faculty has not traversed the entire soul: we remain unaware because the human being includes sense-perception; man is not merely a part [the higher part] of the soul but the total.

None the less every being of the order of soul is in continuous activity as long as life holds, continuously executing to itself its characteristic act: knowledge of the act depends upon transmission and perception. If there is to be perception of what is thus present, we must turn the perceptive faculty inward and hold it to attention there. Hoping to hear a desired voice, we let all others pass and are alert for the coming at last of that most welcome of sounds: so here, we must let the hearings of sense go by, save for sheer necessity, and keep the soul's perception bright and quick to the sounds from above.

SECOND TRACTATE.

THE ORIGIN AND ORDER OF THE BEINGS.

FOLLOWING ON THE FIRST.

1. The One is all things and no one of them; the source of all things is not all things; all things are its possession- running back, so to speak, to it- or, more correctly, not yet so, they will be.

But a universe from an unbroken unity, in which there appears no diversity, not even duality?

It is precisely because that is nothing within the One that all things are from it: in order that Being may be brought about, the source must be no Being but Being's generator, in what is to be thought of as the primal act of generation. Seeking nothing, possessing nothing, lacking nothing, the One is perfect and, in our metaphor, has overflowed, and its exuberance has produced the new: this product has turned again to its begetter and been filled and has become its contemplator and so an Intellectual-Principle.

That station towards the one [the fact that something exists in presence of the One] establishes Being; that vision directed upon the One establishes the

Intellectual-Principle; standing towards the One to the end of vision, it is simultaneously Intellectual-Principle and Being; and, attaining resemblance in virtue of this vision, it repeats the act of the One in pouring forth a vast power.

This second outflow is a Form or Idea representing the Divine Intellect as the Divine Intellect represented its own prior, The One.

This active power sprung from essence [from the Intellectual-Principle considered as Being] is Soul.

Soul arises as the idea and act of the motionless Intellectual-Principle- which itself sprang from its own motionless prior- but the soul's operation is not similarly motionless; its image is generated from its movement. It takes fulness by looking to its source; but it generates its image by adopting another, a downward, movement.

This image of Soul is Sense and Nature, the vegetal principle.

Nothing, however, is completely severed from its prior. Thus the human Soul appears to reach away as far down as to the vegetal order: in some sense it does, since the life of growing things is within its province; but it is not present entire; when it has reached the vegetal order it is there in the sense that having moved thus far downwards it produces- by its outgoing and its tendency towards the less good- another hypostasis or form of being just as its prior (the loftier phase of the Soul) is produced from the Intellectual-Principle which yet remains in untroubled self-possession.

2. To resume: there is from the first principle to ultimate an outgoing in which unfailingly each principle retains its own seat while its offshoot takes another rank, a lower, though on the other hand every being is in identity with its prior as long as it holds that contact.

In the case of soul entering some vegetal form, what is there is one phase, the more rebellious and less intellectual, outgone to that extreme; in a soul entering an animal, the faculty of sensation has been dominant and brought it there; in soul entering man, the movement outward has either been wholly of its reasoning part or has come from the Intellectual-Principle in the sense that the soul, possessing that principle as immanent to its being, has an inborn desire of intellectual activity and of movement in general.

But, looking more minutely into the matter, when shoots or topmost boughs are lopped from some growing thing, where goes the soul that was present in them? Simply, whence it came: soul never knew spatial separation and therefore is always within the source. If you cut the root to pieces, or burn it, where is the life that was present there? In the soul, which never went outside of itself.

No doubt, despite this permanence, the soul must have been in something if it reascends; and if it does not, it is still somewhere; it is in some other vegetal soul: but all this means merely that it is not crushed into some one spot; if a Soul-power reascends, it is within the Soul-power preceding it; that in turn can be only in the soul-power prior

again, the phase reaching upwards to the Intellectual-Principle. Of course nothing here must be understood spatially: Soul never was in space; and the Divine Intellect, again, is distinguished from soul as being still more free.

Soul thus is nowhere but in the Principle which has that characteristic existence at once nowhere and everywhere.

If the soul on its upward path has halted midway before wholly achieving the supreme heights, it has a mid-rank life and has centred itself upon the mid-phase of its being. All in that mid-region is Intellectual-Principle not wholly itself- nothing else because deriving thence [and therefore of that name and rank], yet not that because the Intellectual-Principle in giving it forth is not merged into it.

There exists, thus, a life, as it were, of huge extension, a total in which each several part differs from its next, all making a self-continuous whole under a law of discrimination by which the various forms of things arise with no effacement of any prior in its secondary.

But does this Soul-phase in the vegetal order, produce nothing?

It engenders precisely the Kind in which it is thus present: how, is a question to be handled from another starting-point.

THIRD TRACTATE.

THE KNOWING HYPOSTASES AND THE

TRANSCENDENT.

1. Are we to think that a being knowing itself must contain diversity, that self-knowledge can be affirmed only when some one phase of the self perceives other phases, and that therefore an absolutely simplex entity would be equally incapable of introversion and of self-awareness?

No: a being that has no parts or phases may have this consciousness; in fact there would be no real self-knowing in an entity presented as knowing itself in virtue of being a compound- some single element in it perceiving other elements- as we may know our own form and entire bodily organism by sense-perception: such knowing does not cover the whole field; the knowing element has not had the required cognisance at once of its associates and of itself; this is not the self-knower asked for; it is merely something that knows something else.

Either we must exhibit the self-knowing of an uncompounded being- and show how that is possible- or abandon the belief that any being can possess veritable self-cognition.

To abandon the belief is not possible in view of the many absurdities thus entailed.

It would be already absurd enough to deny this power to the soul or mind, but the very

height of absurdity to deny it to the nature of the Intellectual-Principle, presented thus as knowing the rest of things but not attaining to knowledge, or even awareness, of itself.

It is the province of sense and in some degree of understanding and judgement, but not of the Intellectual-Principle, to handle the external, though whether the Intellectual-Principle holds the knowledge of these things is a question to be examined, but it is obvious that the Intellectual-Principle must have knowledge of the Intellectual objects. Now, can it know those objects alone or must it not simultaneously know itself, the being whose function it is to know just those things? Can it have self-knowledge in the sense [dismissed above as inadequate] of knowing its content while it ignores itself? Can it be aware of knowing its members and yet remain in ignorance of its own knowing self? Self and content must be simultaneously present: the method and degree of this knowledge we must now consider.

2. We begin with the soul, asking whether it is to be allowed self-knowledge and what the knowing principle in it would be and how operating.

The sense-principle in it we may at once decide, takes cognisance only of the external; even in any awareness of events within the body it occupies, this is still the perception of something external to a principle dealing with those bodily conditions not as within but as beneath itself.

The reasoning-principle in the Soul acts upon the representations standing before it as the result of sense-perception; these it judges, combining, distinguishing: or it may also observe the impressions, so to speak, rising from the Intellectual-Principle, and has the same power of handling these; and reasoning will develop to wisdom where it recognizes the new and late-coming impressions [those of sense] and adapts them, so to speak, to those it holds from long before- the act which may be described as the soul's Reminiscence.

So far as this, the efficacy of the Intellectual-Principle in the Soul certainly reaches; but is there also introversion and self-cognition or is that power to be reserved strictly for the Divine Mind?

If we accord self-knowing to this phase of the soul we make it an Intellectual-Principle and will have to show what distinguishes it from its prior; if we refuse it self-knowing, all our thought brings us step by step to some principle which has this power, and we must discover what such self-knowing consists in. If, again, we do allow self-knowledge in the lower we must examine the question of degree; for if there is no difference of degree, then the reasoning principle in soul is the Intellectual-Principle unalloyed.

We ask, then, whether the understanding principle in the soul has equally the power of turning inwards upon itself or whether it has no more than that of comprehending the impressions, superior and inferior, which it receives.

The first stage is to discover what this comprehension is.

3. Sense sees a man and transmits the impression to the understanding. What does the understanding say? It has nothing to say as yet; it accepts and waits; unless, rather, it questions within itself "Who is this?"- someone it has met before- and then, drawing on memory, says, "Socrates."

If it should go on to develop the impression received, it distinguishes various elements in what the representative faculty has set before it; supposing it to say "Socrates, if the man is good," then, while it has spoken upon information from the senses, its total pronouncement is its own; it contains within itself a standard of good.

But how does it thus contain the good within itself?

It is, itself, of the nature of the good and it has been strengthened still towards the perception of all that is good by the irradiation of the Intellectual-Principle upon it; for this pure phase of the soul welcomes to itself the images implanted from its prior.

But why may we not distinguish this understanding phase as Intellectual-Principle and take soul to consist of the later phases from the sensitive downwards?

Because all the activities mentioned are within the scope of a reasoning faculty, and reasoning is characteristically the function of soul.

Why not, however, absolve the question by assigning self-cognisance to this phase?

Because we have allotted to soul the function of dealing- in thought and in multiform action- with the external, and we hold that observation of self and of the content of self must belong to Intellectual-Principle.

If any one says, "Still; what precludes the reasoning soul from observing its own content by some special faculty?" he is no longer posing a principle of understanding or of reasoning but, simply, bringing in the Intellectual-Principle unalloyed.

But what precludes the Intellectual-Principle from being present, unalloyed, within the soul? Nothing, we admit; but are we entitled therefore to think of it as a phase of soul?

We cannot describe it as belonging to the soul though we do describe it as our Intellectual-Principle, something distinct from the understanding, advanced above it, and yet ours even though we cannot include it among soul-phases: it is ours and not ours; and therefore we use it sometimes and sometimes not, whereas we always have use of the understanding; the Intellectual-Principle is ours when we act by it, not ours when we neglect it.

But what is this acting by it? Does it mean that we become the Intellectual-Principle so that our utterance is the utterance of the Intellectual-Principle, or that we represent it?

We are not the Intellectual-Principle; we represent it in virtue of that highest reasoning faculty which draws upon it.

Still; we perceive by means of the perceptive faculty and are, ourselves, the percipients: may we not say the same of the intellective act?

No: our reasoning is our own; we ourselves think the thoughts that occupy the understanding- for this is actually the We- but the operation of the Intellectual-Principle enters from above us as that of the sensitive faculty from below; the We is the soul at its highest, the mid-point between two powers, between the sensitive principle, inferior to us, and the intellectual principle superior. We think of the perceptive act as integral to ourselves because our sense-perception is uninterrupted; we hesitate as to the Intellectual-Principle both because we are not always occupied with it and because it exists apart, not a principle inclining to us but one to which we incline when we choose to look upwards.

The sensitive principle is our scout; the Intellectual-Principle our King.

4. But we, too, are king when we are moulded to the Intellectual-Principle.

That correspondence may be brought about in two ways: either the radii from that centre are traced upon us to be our law or we are filled full of the Divine Mind, which again may have become to us a thing seen and felt as a presence.

Hence our self-knowing comes to the knowing of all the rest of our being in virtue of this thing patently present; or by that power itself communicating to us its own power of self-knowing; or by our becoming identical with that principle of knowledge.

Thus the self-knower is a double person: there is the one that takes cognisance of the principle in virtue of which understanding occurs in the soul or mind; and there is the higher, knowing himself by the Intellectual-Principle with which he becomes identical: this latter knows the self as no longer man but as a being that has become something other through and through: he has thrown himself as one thing over into the superior order, taking with him only that better part of the soul which alone is winged for the Intellectual Act and gives the man, once established There, the power to appropriate what he has seen.

We can scarcely suppose this understanding faculty to be unaware that it has understanding; that it takes cognisance of things external; that in its judgements it decides by the rules and standards within itself held directly from the Intellectual-Principle; that there is something higher than itself, something which, moreover, it has no need to seek but fully possesses. What can we conceive to escape the self-knowledge of a principle which admittedly knows the place it holds and the work it has to do? It affirms that it springs from Intellectual-Principle whose second and image it is, that it holds all within itself, the universe of things, engraved, so to say, upon it as all is held There by the eternal engraver. Aware so far of itself, can it be supposed to halt at that? Are we to suppose that all we can do is to apply a distinct power of our nature and come thus to awareness of that Intellectual-Principle as aware of itself? Or may we not appropriate that principle- which belongs to us as we to it- and thus attain to

awareness, at once, of it and of ourselves? Yes: this is the necessary way if we are to experience the self-knowledge vested in the Intellectual-Principle. And a man becomes Intellectual-Principle when, ignoring all other phases of his being, he sees through that only and sees only that and so knows himself by means of the self- in other words attains the self-knowledge which the Intellectual-Principle possesses.

5. Does it all come down, then, to one phase of the self knowing another phase?

That would be a case of knower distinguished from known, and would not be self-knowing.

What, then, if the total combination were supposed to be of one piece, knower quite undistinguished from known, so that, seeing any given part of itself as identical with itself, it sees itself by means of itself, knower and known thus being entirely without differentiation?

To begin with, the distinction in one self thus suggested is a strange phenomenon. How is the self to make the partition? The thing cannot happen of itself. And, again, which phase makes it? The phase that decides to be the knower or that which is to be the known? Then how can the knowing phase know itself in the known when it has chosen to be the knower and put itself apart from the known? In such self-knowledge by sundering it can be aware only of the object, not of the agent; it will not know its entire content, or itself as an integral whole; it knows the phase seen but not the seeing phase and thus has knowledge of something else, not self-knowledge.

In order to perfect self-knowing it must bring over from itself the knowing phase as well: seeing subject and seen objects must be present as one thing. Now if in this coalescence of seeing subject with seen objects, the objects were merely representations of the reality, the subject would not possess the realities: if it is to possess them it must do so not by seeing them as the result of any self-division but by knowing them, containing them, before any self-division occurs.

At that, the object known must be identical with the knowing act [or agent], the Intellectual-Principle, therefore, identical with the Intellectual Realm. And in fact, if this identity does not exist, neither does truth; the Principle that should contain realities is found to contain a transcript, something different from the realities; that constitutes non-Truth; Truth cannot apply to something conflicting with itself; what it affirms it must also be.

Thus we find that the Intellectual-Principle, the Intellectual Realm and Real Being constitute one thing, which is the Primal Being; the primal Intellectual-Principle is that which contains the realities or, rather, which is identical with them.

But taking Primal Intellection and its intellectual object to be a unity, how does that give an Intellective Being knowing itself? An intellection enveloping its object or identical with it is far from exhibiting the Intellectual-Principle as self-knowing.

All turns on the identity. The intellectual object is itself an activity, not a mere potentiality; it is not lifeless; nor are the life and intellection brought into it as into something naturally devoid of them, some stone or other dead matter; no, the intellectual object is essentially existent, the primal reality. As an active force, the first activity, it must be, also itself, the noblest intellection, intellection possessing real being since it is entirely true; and such an intellection, primal and primally existent, can be no other than the primal principle of Intellection: for that primal principle is no potentiality and cannot be an agent distinct from its act and thus, once more, possessing its essential being as a mere potentiality. As an act- and one whose very being is an act- it must be undistinguishably identical with its act: but Being and the Intellectual object are also identical with that act; therefore the Intellectual-Principle, its exercise of intellection and the object of intellection all are identical. Given its intellection identical with intellectual object and the object identical with the Principle itself, it cannot but have self-knowledge: its intellection operates by the intellectual act which is itself upon the intellectual object which similarly is itself. It possesses self-knowing, thus, on every count; the act is itself; and the object seen in that act- self, is itself.

6. Thus we have shown that there exists that which in the strictest sense possesses self-knowing.

This self-knowing agent, perfect in the Intellectual-Principle, is modified in the Soul.

The difference is that, while the soul knows itself as within something else, the Intellectual-Principle knows itself as self-dependent, knows all its nature and character, and knows by right of its own being and by simple introversion. When it looks upon the authentic existences it is looking upon itself; its vision as its effective existence, and this efficacy is itself since the Intellectual-Principle and the Intellectual Act are one: this is an integral seeing itself by its entire being, not a part seeing by a part.

But has our discussion issued in an Intellectual-Principle having a persuasive activity [furnishing us with probability]?

No: it brings compulsion not persuasion; compulsion belongs to the Intellectual-Principle, persuasion to the soul or mind, and we seem to desire to be persuaded rather than to see the truth in the pure intellect.

As long as we were Above, collected within the Intellectual nature, we were satisfied; we were held in the intellectual act; we had vision because we drew all into unity- for the thinker in us was the Intellectual-Principle telling us of itself- and the soul or mind was motionless, assenting to that act of its prior. But now that we are once more here- living in the secondary, the soul- we seek for persuasive probabilities: it is through the image we desire to know the archetype.

Our way is to teach our soul how the Intellectual-Principle exercises self-vision; the phase thus to be taught is that which already touches the intellective order, that which we call the understanding or intelligent soul, indicating by the very name that it is already of itself in some degree an Intellectual-Principle or that it holds its peculiar

power through and from that Principle. This phase must be brought to understand by what means it has knowledge of the thing it sees and warrant for what it affirms: if it became what it affirms, it would by that fact possess self-knowing. All its vision and affirmation being in the Supreme or deriving from it- There where itself also is- it will possess self-knowledge by its right as a Reason-Principle, claiming its kin and bringing all into accord with the divine imprint upon it.

The soul therefore [to attain self-knowledge] has only to set this image [that is to say, its highest phase] alongside the veritable Intellectual-Principle which we have found to be identical with the truths constituting the objects of intellection, the world of Primals and Reality: for this Intellectual-Principle, by very definition, cannot be outside of itself, the Intellectual Reality: self-gathered and unalloyed, it is Intellectual-Principle through all the range of its being- for unintelligent intelligence is not possible- and thus it possesses of necessity self-knowing, as a being immanent to itself and one having for function and essence to be purely and solely Intellectual-Principle. This is no doer; the doer, not self-intent but looking outward, will have knowledge, in some kind, of the external, but, if wholly of this practical order, need have no self-knowledge; where, on the contrary, there is no action- and of course the pure Intellectual-Principle cannot be straining after any absent good- the intention can be only towards the self; at once self-knowing becomes not merely plausible but inevitable; what else could living signify in a being immune from action and existing in Intellect?

7. The contemplating of God, we might answer.

But to admit its knowing God is to be compelled to admit its self-knowing. It will know what it holds from God, what God has given forth or may; with this knowledge, it knows itself at the stroke, for it is itself one of those given things- in fact is all of them. Knowing God and His power, then, it knows itself, since it comes from Him and carries His power upon it; if, because here the act of vision is identical with the object, it is unable to see God clearly, then all the more, by the equation of seeing and seen, we are driven back upon that self-seeing and self-knowing in which seeing and thing seen are undistinguishably one thing.

And what else is there to attribute to it?

Repose, no doubt; but, to an Intellectual-Principle, Repose is not an abdication from intellect; its Repose is an Act, the act of abstention from the alien: in all forms of existence repose from the alien leaves the characteristic activity intact, especially where the Being is not merely potential but fully realized.

In the Intellectual-Principle, the Being is an Act and in the absence of any other object it must be self-directed; by this self-intellection it holds its Act within itself and upon itself; all that can emanate from it is produced by this self-centering and self-intention; first- self-gathered, it then gives itself or gives something in its likeness; fire must first be self-centred and be fire, true to fire's natural Act; then it may reproduce itself elsewhere.

Once more, then; the Intellectual-Principle is a self-intent activity, but soul has the

double phase, one inner, intent upon the Intellectual-Principle, the other outside it and facing to the external; by the one it holds the likeness to its source; by the other, even in its unlikeness, it still comes to likeness in this sphere, too, by virtue of action and production; in its action it still contemplates, and its production produces Ideal-forms-divine intellections perfectly wrought out- so that all its creations are representations of the divine Intellection and of the divine Intellect, moulded upon the archetype, of which all are emanations and images, the nearer more true, the very latest preserving some faint likeness of the source.

8. Now comes the question what sort of thing does the Intellectual-Principle see in seeing the Intellectual Realm and what in seeing itself?

We are not to look for an Intellectual realm reminding us of the colour or shape to be seen on material objects: the intellectual antedates all such things; and even in our sphere the production is very different from the Reason-Principle in the seeds from which it is produced. The seed principles are invisible and the beings of the Intellectual still more characteristically so; the Intellectuals are of one same nature with the Intellectual Realm which contains them, just as the Reason-Principle in the seed is identical with the soul, or life-principle, containing it.

But the Soul (considered as apart from the Intellectual-Principle) has no vision of what it thus contains, for it is not the producer but, like the Reason-Principles also, an image of its source: that source is the brilliant, the authentic, the primarily existent, the thing self-sprung and self-intent; but its image, soul, is a thing which can have no permanence except by attachment, by living in that other; the very nature of an image is that, as a secondary, it shall have its being in something else, if at all it exist apart from its original. Hence this image (soul) has not vision, for it has not the necessary light, and, if it should see, then, as finding its completion elsewhere, it sees another, not itself.

In the pure Intellectual there is nothing of this: the vision and the envisioned are a unity; the seen is as the seeing and seeing as seen.

What, then, is there that can pronounce upon the nature of this all-unity?

That which sees: and to see is the function of the Intellectual-Principle. Even in our own sphere [we have a parallel to this self-vision of a unity], our vision is light or rather becomes one with light, and it sees light for it sees colours. In the intellectual, the vision sees not through some medium but by and through itself alone, for its object is not external: by one light it sees another not through any intermediate agency; a light sees a light, that is to say a thing sees itself. This light shining within the soul enlightens it; that is, it makes the soul intellective, working it into likeness with itself, the light above.

Think of the traces of this light upon the soul, then say to yourself that such, and more beautiful and broader and more radiant, is the light itself; thus you will approach to the nature of the Intellectual-Principle and the Intellectual Realm, for it is this light, itself lit from above, which gives the soul its brighter life.

It is not the source of the generative life of the soul which, on the contrary, it draws inward, preserving it from such diffusion, holding it to the love of the splendour of its Prior.

Nor does it give the life of perception and sensation, for that looks to the external and to what acts most vigorously upon the senses whereas one accepting that light of truth may be said no longer to see the visible, but the very contrary.

This means in sum that the life the soul takes thence is an intellective life, a trace of the life in the [divine] Intellect, in which alone the authentic exists.

The life in the Divine Intellect is also an Act: it is the primal light outlamping to itself primarily, its own torch; light-giver and lit at once; the authentic intellectual object, knowing at once and known, seen to itself and needing no other than itself to see by, self-sufficing to the vision, since what it sees it is; known to us by that very same light, our knowledge of it attained through itself, for from nowhere else could we find the means of telling of it. By its nature, its self-vision is the clearer but, using it as our medium, we too may come to see by it.

In the strength of such considerations we lead up our own soul to the Divine, so that it poses itself as an image of that Being, its life becoming an imprint and a likeness of the Highest, its every act of thought making it over into the Divine and the Intellectual.

If the soul is questioned as to the nature of that Intellectual-Principle- the perfect and all-embracing, the primal self-knower- it has but to enter into that Principle, or to sink all its activity into that, and at once it shows itself to be in effective possession of those priors whose memory it never lost: thus, as an image of the Intellectual-Principle, it can make itself the medium by which to attain some vision of it; it draws upon that within itself which is most closely resemblant, as far as resemblance is possible between divine Intellect and any phase of soul.

9. In order, then, to know what the Divine Mind is, we must observe soul and especially its most God-like phase.

One certain way to this knowledge is to separate first, the man from the body- yourself, that is, from your body- next to put aside that soul which moulded the body, and, very earnestly, the system of sense with desires and impulses and every such futility, all setting definitely towards the mortal: what is left is the phase of the soul which we have declared to be an image of the Divine Intellect, retaining some light from that sun, while it pours downward upon the sphere of magnitudes [that is, of Matter] the light playing about itself which is generated from its own nature.

Of course we do not pretend that the sun's light [as the analogy might imply] remains a self-gathered and sun-centred thing: it is at once outrushing and indwelling; it strikes outward continuously, lap after lap, until it reaches us upon our earth: we must take it that all the light, including that which plays about the sun's orb, has travelled; otherwise we would have a void expanse, that of the space- which is material- next to the sun's

orb. The Soul, on the contrary- a light springing from the Divine Mind and shining about it- is in closest touch with that source; it is not in transit but remains centred there, and, in likeness to that principle, it has no place: the light of the sun is actually in the air, but the soul is clean of all such contact so that its immunity is patent to itself and to any other of the same order.

And by its own characteristic act, though not without reasoning process, it knows the nature of the Intellectual-Principle which, on its side, knows itself without need of reasoning, for it is ever self-present whereas we become so by directing our soul towards it; our life is broken and there are many lives, but that principle needs no changings of life or of things; the lives it brings to being are for others not for itself: it cannot need the inferior; nor does it for itself produce the less when it possesses or is the all, nor the images when it possesses or is the prototype.

Anyone not of the strength to lay hold of the first soul, that possessing pure intellection, must grasp that which has to do with our ordinary thinking and thence ascend: if even this prove too hard, let him turn to account the sensitive phase which carries the ideal forms of the less fine degree, that phase which, too, with its powers, is immaterial and lies just within the realm of Ideal-principles.

One may even, if it seem necessary, begin as low as the reproductive soul and its very production and thence make the ascent, mounting from those ultimate ideal principles to the ultimates in the higher sense, that is to the primals.

10. This matter need not be elaborated at present: it suffices to say that if the created were all, these ultimates [the higher] need not exist: but the Supreme does include primals, the primals because the producers. In other words, there must be, with the made, the making source; and, unless these are to be identical, there will be need of some link between them. Similarly, this link which is the Intellectual-Principle demands yet a Transcendent. If we are asked why this Transcendent also should not have self-vision, our answer is that it has no need of vision; but this we will discuss later: for the moment we go back, since the question at issue is gravely important.

We repeat that the Intellectual-Principle must have, actually has, self-vision, firstly because it has multiplicity, next because it exists for the external and therefore must be a seeing power, one seeing that external; in fact its very essence is vision. Given some external, there must be vision; and if there be nothing external the Intellectual-Principle [Divine Mind] exists in vain. Unless there is something beyond bare unity, there can be no vision: vision must converge with a visible object. And this which the seer is to see can be only a multiple, no undistinguishable unity; nor could a universal unity find anything upon which to exercise any act; all, one and desolate, would be utter stagnation; in so far as there is action, there is diversity. If there be no distinctions, what is there to do, what direction in which to move? An agent must either act upon the extern or be a multiple and so able to act upon itself: making no advance towards anything other than itself, it is motionless and where it could know only blank fixity it can know nothing.

The intellective power, therefore, when occupied with the intellectual act, must be in a state of duality, whether one of the two elements stand actually outside or both lie within: the intellectual act will always comport diversity as well as the necessary identity, and in the same way its characteristic objects [the Ideas] must stand to the Intellectual-Principle as at once distinct and identical. This applies equally to the single object; there can be no intellection except of something containing separable detail and, since the object is a Reason-principle [a discriminated Idea] it has the necessary element of multiplicity. The Intellectual-Principle, thus, is informed of itself by the fact of being a multiple organ of vision, an eye receptive of many illuminated objects. If it had to direct itself to a memberless unity, it would be dereasoned: what could it say or know of such an object? The self-affirmation of [even] a memberless unity implies the repudiation of all that does not enter into the character: in other words, it must be multiple as a preliminary to being itself.

Then, again, in the assertion "I am this particular thing," either the "particular thing" is distinct from the assertor- and there is a false statement- or it is included within it, and, at once, multiplicity is asserted: otherwise the assertion is "I am what I am," or "I am I."

If it be no more than a simple duality able to say "I and that other phase," there is already multiplicity, for there is distinction and ground of distinction, there is number with all its train of separate things.

In sum, then, a knowing principle must handle distinct items: its object must, at the moment of cognition, contain diversity; otherwise the thing remains unknown; there is mere conjunction, such a contact, without affirmation or comprehension, as would precede knowledge, the intellect not yet in being, the impinging agent not percipient.

Similarly the knowing principle itself cannot remain simplex, especially in the act of self-knowing: all silent though its self-perception be, it is dual to itself. Of course it has no need of minute self-handling since it has nothing to learn by its intellective act; before it is [effectively] Intellect, it holds knowledge of its own content. Knowledge implies desire, for it is, so to speak, discovery crowning a search; the utterly undifferentiated remains self-centred and makes no enquiry about that self: anything capable of analysing its content, must be a manifold.

11. Thus the Intellectual-Principle, in the act of knowing the Transcendent, is a manifold. It knows the Transcendent in very essence but, with all its effort to grasp that prior as a pure unity, it goes forth amassing successive impressions, so that, to it, the object becomes multiple: thus in its outgoing to its object it is not [fully realised] Intellectual-Principle; it is an eye that has not yet seen; in its return it is an eye possessed of the multiplicity which it has itself conferred: it sought something of which it found the vague presentment within itself; it returned with something else, the manifold quality with which it has of its own act invested the simplex.

If it had not possessed a previous impression of the Transcendent, it could never have grasped it, but this impression, originally of unity, becomes an impression of multiplicity; and the Intellectual-Principle, in taking cognisance of that multiplicity, knows the

Transcendent and so is realized as an eye possessed of its vision.

It is now Intellectual-Principle since it actually holds its object, and holds it by the act of intellection: before, it was no more than a tendance, an eye blank of impression: it was in motion towards the transcendental; now that it has attained, it has become Intellectual-Principle henceforth absorbed; in virtue of this intellection it holds the character of Intellectual-Principle, of Essential Existence and of Intellectual Act where, previously, not possessing the Intellectual Object, it was not Intellectual Perception, and, not yet having exercised the Intellectual Act, it was not Intellectual-Principle.

The Principle before all these principles is no doubt the first principle of the universe, but not as immanent: immanence is not for primal sources but for engendering secondaries; that which stands as primal source of everything is not a thing but is distinct from all things: it is not, then, a member of the total but earlier than all, earlier, thus, than the Intellectual-Principle- which in fact envelops the entire train of things.

Thus we come, once more, to a Being above the Intellectual-Principle and, since the sequent amounts to no less than the All, we recognise, again, a Being above the All. This assuredly cannot be one of the things to which it is prior. We may not call it "Intellect"; therefore, too, we may not call it "the Good," if "the Good" is to be taken in the sense of some one member of the universe; if we mean that which precedes the universe of things, the name may be allowed.

The Intellectual-Principle is established in multiplicity; its intellection, self-sprung though it be, is in the nature of something added to it [some accidental dualism] and makes it multiple: the utterly simplex, and therefore first of all beings, must, then, transcend the Intellectual-Principle; and, obviously, if this had intellection it would no longer transcend the Intellectual-Principle but be it, and at once be a multiple.

12. But why, after all, should it not be such a manifold as long as it remains one substantial existence, having the multiplicity not of a compound being but of a unity with a variety of activities?

Now, no doubt, if these various activities are not themselves substantial existences- but merely manifestations of latent potentiality- there is no compound; but, on the other hand, it remains incomplete until its substantial existence be expressed in act. If its substantial existence consists in its Act, and this Act constitutes multiplicity, then its substantial existence will be strictly proportioned to the extent of the multiplicity.

We allow this to be true for the Intellectual-Principle to which we have allotted [the multiplicity of] self-knowing; but for the first principle of all, never. Before the manifold, there must be The One, that from which the manifold rises: in all numerical series, the unit is the first.

But- we will be answered- for number, well and good, since the suite makes a compound; but in the real beings why must there be a unit from which the multiplicity of entities shall proceed?

Because [failing such a unity] the multiplicity would consist of disjointed items, each starting at its own distinct place and moving accidentally to serve to a total.

But, they will tell us, the Activities in question do proceed from a unity, from the Intellectual-Principle, a simplex.

By that they admit the existence of a simplex prior to the Activities; and they make the Activities perdurable and class them as substantial existences [hypostases]; but as Hypostases they will be distinct from their source, which will remain simplex; while its product will in its own nature be manifold and dependent upon it.

Now if these activities arise from some unexplained first activity in that principle, then it too contains the manifold: if, on the contrary, they are the very earliest activities and the source and cause of any multiple product and the means by which that Principle is able, before any activity occurs, to remain self-centred, then they are allocated to the product of which they are the cause; for this principle is one thing, the activities going forth from it are another, since it is not, itself, in act. If this be not so, the first act cannot be the Intellectual-Principle: the One does not provide for the existence of an Intellectual-Principle which thereupon appears; that provision would be something [an Hypostasis] intervening between the One and the Intellectual-Principle, its offspring. There could, in fact, be no such providing in The One, for it was never incomplete; and such provision could name nothing that ought to be provided. It cannot be thought to possess only some part of its content, and not the whole; nor did anything exist to which it could turn in desire. Clearly anything that comes into being after it, arises without shaking to its permanence in its own habit. It is essential to the existence of any new entity that the First remain in self-gathered repose throughout: otherwise, it moved before there was motion and had intellectual act before any intellection- unless, indeed, that first act [as motionless and without intelligence] was incomplete, nothing more than a tendency. And what can we imagine it lights upon to become the object of such a tendency?

The only reasonable explanation of act flowing from it lies in the analogy of light from a sun. The entire intellectual order may be figured as a kind of light with the One in repose at its summit as its King: but this manifestation is not cast out from it: we may think, rather, of the One as a light before the light, an eternal irradiation resting upon the Intellectual Realm; this, not identical with its source, is yet not severed from it nor of so remote a nature as to be less than Real-Being; it is no blind thing, but is seeing and knowing, the primal knower.

The One, as transcending Intellect, transcends knowing: above all need, it is above the need of the knowing which pertains solely to the Secondary Nature. Knowing is a unitary thing, but defined: the first is One, but undefined: a defined One would not be the One-absolute: the absolute is prior to the definite.

13. Thus The One is in truth beyond all statement: any affirmation is of a thing; but the all-transcending, resting above even the most august divine Mind, possesses alone of

all true being, and is not a thing among things; we can give it no name because that would imply predication: we can but try to indicate, in our own feeble way, something concerning it: when in our perplexity we object, "Then it is without self-perception, without self-consciousness, ignorant of itself"; we must remember that we have been considering it only in its opposites.

If we make it knowable, an object of affirmation, we make it a manifold; and if we allow intellection in it we make it at that point indigent: supposing that in fact intellection accompanies it, intellection by it must be superfluous.

Self-intellection- which is the truest- implies the entire perception of a total self formed from a variety converging into an integral; but the Transcendent knows neither separation of part nor any such enquiry; if its intellectual act were directed upon something outside, then, the Transcendent would be deficient and the intellection faulty.

The wholly simplex and veritable self-sufficing can be lacking at no point: self-intellection begins in that principle which, secondarily self-sufficing, yet needs itself and therefore needs to know itself: this principle, by its self-presence, achieves its sufficiency in virtue of its entire content [it is the all]: it becomes thus competent from the total of its being, in the act of living towards itself and looking upon itself.

Consciousness, as the very word indicates, is a conperception, an act exercised upon a manifold: and even intellection, earlier [nearer to the divine] though it is, implies that the agent turns back upon itself, upon a manifold, then. If that agent says no more than "I am a being," it speaks [by the implied dualism] as a discoverer of the extern; and rightly so, for being is a manifold; when it faces towards the unmanifold and says, "I am that being," it misses both itself and the being [since the simplex cannot be thus divided into knower and known]: if it is [to utter] truth it cannot indicate by "being" something like a stone; in the one phrase multiplicity is asserted; for the being thus affirmed- [even] the veritable, as distinguished from such a mere container of some trace of being as ought not to be called a being since it stands merely as image to archetype- even this must possess multiplicity.

But will not each item in that multiplicity be an object of intellection to us?

Taken bare and single, no: but Being itself is manifold within itself, and whatever else you may name has Being.

This accepted, it follows that anything that is to be thought of as the most utterly simplex of all cannot have self-intellection; to have that would mean being multiple. The Transcendent, thus, neither knows itself nor is known in itself.

14. How, then, do we ourselves come to be speaking of it?

No doubt we deal with it, but we do not state it; we have neither knowledge nor intellection of it.

But in what sense do we even deal with it when we have no hold upon it?

We do not, it is true, grasp it by knowledge, but that does not mean that we are utterly void of it; we hold it not so as to state it, but so as to be able to speak about it. And we can and do state what it is not, while we are silent as to what it is: we are, in fact, speaking of it in the light of its sequels; unable to state it, we may still possess it.

Those divinely possessed and inspired have at least the knowledge that they hold some greater thing within them though they cannot tell what it is; from the movements that stir them and the utterances that come from them they perceive the power, not themselves, that moves them: in the same way, it must be, we stand towards the Supreme when we hold the Intellectual-Principle pure; we know the divine Mind within, that which gives Being and all else of that order: but we know, too, that other, know that it is none of these, but a nobler principle than any-thing we know as Being; fuller and greater; above reason, mind and feeling; conferring these powers, not to be confounded with them.

15. Conferring- but how? As itself possessing them or not? How can it convey what it does not possess, and yet if it does possess how is it simplex? And if, again, it does not, how is it the source of the manifold?

A single, unmanifold emanation we may very well allow- how even that can come from a pure unity may be a problem, but we may always explain it on the analogy of the irradiation from a luminary- but a multitudinous production raises question.

The explanation is that what comes from the Supreme cannot be identical with it and assuredly cannot be better than it- what could be better than The One or the utterly transcendent? The emanation, then, must be less good, that is to say, less self-sufficing: now what must that be which is less self-sufficing than The One? Obviously the Not-One, that is to say, multiplicity, but a multiplicity striving towards unity; that is to say, a One-that-is-many.

All that is not One is conserved by virtue of the One, and from the One derives its characteristic nature: if it had not attained such unity as is consistent with being made up of multiplicity we could not affirm its existence: if we are able to affirm the nature of single things, this is in virtue of the unity, the identity even, which each of them possesses. But the all-transcendent, utterly void of multiplicity, has no mere unity of participation but is unity's self, independent of all else, as being that from which, by whatever means, all the rest take their degree of unity in their standing, near or far, towards it.

In virtue of the unity manifested in its variety it exhibits, side by side, both an all-embracing identity and the existence of the secondary: all the variety lies in the midst of a sameness, and identity cannot be separated from diversity since all stands as one; each item in that content, by the fact of participating in life, is a One-many: for the item could not make itself manifest as a One-and-all.

Only the Transcendent can be that; it is the great beginning, and the beginning must be

a really existent One, wholly and truly One, while its sequent, poured down in some way from the One, is all, a total which has participation in unity and whose every member is similarly all and one.

What then is the All?

The total of which the Transcendent is the Source.

But in what way is it that source? In the sense, perhaps, of sustaining things as bestower of the unity of each single item?

That too; but also as having established them in being.

But how? As having, perhaps, contained them previously?

We have indicated that, thus, the First would be a manifold.

May we think, perhaps, that the First contained the universe as an indistinct total whose items are elaborated to distinct existence within the Second by the Reason-Principle there? That Second is certainly an Activity; the Transcendent would contain only the potentiality of the universe to come.

But the nature of this contained potentiality would have to be explained: it cannot be that of Matter, a receptivity, for thus the Source becomes passive- the very negation of production.

How then does it produce what it does not contain? Certainly not at haphazard and certainly not by selection. How then?

We have observed that anything that may spring from the One must be different from it. Differing, it is not One, since then it would be the Source. If unity has given place to duality, from that moment there is multiplicity; for here is variety side by side with identity, and this imports quality and all the rest.

We may take it as proved that the emanation of the Transcendent must be a Not-One something other than pure unity, but that it is a multiplicity, and especially that it is such a multiplicity as is exhibited in the sequent universe, this is a statement worthy of deliberation: some further enquiry must be made, also, as to the necessity of any sequel to the First.

16. We have, of course, already seen that a secondary must follow upon the First, and that this is a power immeasurably fruitful; and we indicated that this truth is confirmed by the entire order of things since there is nothing, not even in the lowest ranks, void of the power of generating. We have now to add that, since things engendered tend downwards and not upwards and, especially, move towards multiplicity, the first principle of all must be less a manifold than any.

That which engenders the world of sense cannot itself be a sense-world; it must be the Intellect and the Intellectual world; similarly, the prior which engenders the Intellectual-Principle and the Intellectual world cannot be either, but must be something of less multiplicity. The manifold does not rise from the manifold: the intellectual multiplicity has its source in what is not manifold; by the mere fact of being manifold, the thing is not the first principle: we must look to something earlier.

All must be grouped under a unity which, as standing outside of all multiplicity and outside of any ordinary simplicity, is the veritably and essentially simplex.

Still, how can a Reason-Principle [the Intellectual], characteristically a manifold, a total, derive from what is obviously no Reason-Principle?

But how, failing such origin in the simplex, could we escape [what cannot be accepted] the derivation of a Reason-Principle from a Reason-Principle?

And how does the secondarily good [the imaged Good] derive from The Good, the Absolute? What does it hold from the Absolute Good to entitle it to the name?

Similarity to the prior is not enough, it does not help towards goodness; we demand similarity only to an actually existent Good: the goodness must depend upon derivation from a Prior of such a nature that the similarity is desirable because that Prior is good, just as the similarity would be undesirable if the Prior were not good.

Does the similarity with the Prior consist, then, in a voluntary resting upon it?

It is rather that, finding its condition satisfying, it seeks nothing: the similarity depends upon the all-sufficiency of what it possesses; its existence is agreeable because all is present to it, and present in such a way as not to be even different from it [Intellectual-Principle is Being].

All life belongs to it, life brilliant and perfect; thus all in it is at once life-principle and Intellectual-Principle, nothing in it aloof from either life or intellect: it is therefore self-sufficing and seeks nothing: and if it seeks nothing this is because it has in itself what, lacking, it must seek. It has, therefore, its Good within itself, either by being of that order- in what we have called its life and intellect- or in some other quality or character going to produce these.

If this [secondary principle] were The Good [The Absolute], nothing could transcend these things, life and intellect: but, given the existence of something higher, this Intellectual-Principle must possess a life directed towards that Transcendent, dependent upon it, deriving its being from it, living towards it as towards its source. The First, then, must transcend this principle of life and intellect which directs thither both the life in itself, a copy of the Reality of the First, and the intellect in itself which is again a copy, though of what original there we cannot know.

17. But what can it be which is loftier than that existence- a life compact of wisdom,

untouched by struggle and error, or than this Intellect which holds the Universe with all there is of life and intellect?

If we answer "The Making Principle," there comes the question, "making by what virtue?" and unless we can indicate something higher there than in the made, our reasoning has made no advance: we rest where we were.

We must go higher- if it were only for the reason that the maker of all must have a self-sufficing existence outside of all things- since all the rest is patently indigent- and that everything has participated in The One and, as drawing on unity, is itself not unity.

What then is this in which each particular entity participates, the author of being to the universe and to each item of the total?

Since it is the author of all that exists, and since the multiplicity in each thing is converted into a self-sufficing existence by this presence of The One, so that even the particular itself becomes self-sufficing, then clearly this principle, author at once of Being and of self-sufficingness, is not itself a Being but is above Being and above even self-sufficing.

May we stop, content, with that? No: the Soul is yet, and even more, in pain. Is she ripe, perhaps, to bring forth, now that in her pangs she has come so close to what she seeks? No: we must call upon yet another spell if anywhere the assuagement is to be found. Perhaps in what has already been uttered, there lies the charm if only we tell it over often? No: we need a new, a further, incantation. All our effort may well skim over every truth and through all the verities in which we have part, and yet the reality escape us when we hope to affirm, to understand: for the understanding, in order to its affirmation must possess itself of item after item; only so does it traverse all the field: but how can there be any such peregrination of that in which there is no variety?

All the need is met by a contact purely intellectual. At the moment of touch there is no power whatever to make any affirmation; there is no leisure; reasoning upon the vision is for afterwards. We may know we have had the vision when the Soul has suddenly taken light. This light is from the Supreme and is the Supreme; we may believe in the Presence when, like that other God on the call of a certain man, He comes bringing light: the light is the proof of the advent. Thus, the Soul unlit remains without that vision; lit, it possesses what it sought. And this is the true end set before the Soul, to take that light, to see the Supreme by the Supreme and not by the light of any other principle- to see the Supreme which is also the means to the vision; for that which illumines the Soul is that which it is to see just as it is by the sun's own light that we see the sun.

But how is this to be accomplished?

Cut away everything.

FOURTH TRACTATE.

HOW THE SECONDARIES RISE FROM THE FIRST:

AND ON THE ONE.

1. Anything existing after The First must necessarily arise from that First, whether immediately or as tracing back to it through intervenients; there must be an order of secondaries and tertiaries, in which any second is to be referred to The First, any third to the second.

Standing before all things, there must exist a Simplex, differing from all its sequel, self-gathered not inter-blended with the forms that rise from it, and yet able in some mode of its own to be present to those others: it must be authentically a unity, not merely something elaborated into unity and so in reality no more than unity's counterfeit; it will debar all telling and knowing except that it may be described as transcending Being- for if there were nothing outside all alliance and compromise, nothing authentically one, there would be no Source. Untouched by multiplicity, it will be wholly self-sufficing, an absolute First, whereas any not-first demands its earlier, and any non-simplex needs the simplicities within itself as the very foundations of its composite existence.

There can be only one such being: if there were another, the two [as indiscernible] would resolve into one, for we are not dealing with two corporal entities.

Our One-First is not a body: a body is not simplex and, as a thing of process cannot be a First, the Source cannot be a thing of generation: only a principle outside of body, and utterly untouched by multiplicity, could be The First.

Any unity, then, later than The First must be no longer simplex; it can be no more than a unity in diversity.

Whence must such a sequent arise?

It must be an offspring of The First; for suppose it the product of chance, that First ceases to be the Principle of All.

But how does it arise from The First?

If The First is perfect, utterly perfect above all, and is the beginning of all power, it must be the most powerful of all that is, and all other powers must act in some partial imitation of it. Now other beings, coming to perfection, are observed to generate; they are unable to remain self-closed; they produce: and this is true not merely of beings endowed with will, but of growing things where there is no will; even lifeless objects impart something of themselves, as far as they may; fire warms, snow chills, drugs have their own outgoing efficacy; all things to the utmost of their power imitate the Source in some operation tending to eternity and to service.

How then could the most perfect remain self-set- the First Good, the Power towards all,

how could it grudge or be powerless to give of itself, and how at that would it still be the Source?

If things other than itself are to exist, things dependent upon it for their reality, it must produce since there is no other source. And further this engendering principle must be the very highest in worth; and its immediate offspring, its secondary, must be the best of all that follows.

2. If the Intellectual-Principle were the engendering Source, then the engendered secondary, while less perfect than the Intellectual-Principle, would be close to it and similar to it: but since the engendering Source is above the Intellectual-Principle, the secondary can only be that principle.

But why is the Intellectual-Principle not the generating source?

Because [it is not a self-sufficing simplex]: the Act of the Intellectual-Principle is intellection, which means that, seeing the intellectual object towards which it has turned, it is consummated, so to speak, by that object, being in itself indeterminate like sight [a vague readiness for any and every vision] and determined by the intellectual object. This is why it has been said that "out of the indeterminate dyad and The One arise the Ideas and the numbers": for the dyad is the Intellectual-Principle.

Thus it is not a simplex; it is manifold; it exhibits a certain composite quality- within the Intellectual or divine order, of course- as the principle that sees the manifold. It is, further, itself simultaneously object and agent of intellection and is on that count also a duality: and it possesses besides another object of intellection in the Order following upon itself.

But how can the Intellectual-Principle be a product of the Intellectual Object?

In this way: the intellectual object is self-gathered [self-compact] and is not deficient as the seeing and knowing principle must be- deficient, mean, as needing an object- it is therefore no unconscious thing: all its content and accompaniment are its possession; it is self-distinguishing throughout; it is the seat of life as of all things; it is, itself, that self-intellection which takes place in eternal repose, that is to say, in a mode other than that of the Intellectual-Principle.

But if something comes to being within an entity which in no way looks outside itself- and especially within a being which is the sum of being- that entity must be the source of the new thing: stable in its own identity, it produces; but the product is that of an unchanged being: the producer is unchangeably the intellectual object, the product is produced as the Intellectual Act, an Act taking intellection of its source- the only object that exists for it- and so becoming Intellectual-Principle, that is to say, becoming another intellectual being, resembling its source, a reproduction and image of that.

But how from amid perfect rest can an Act arise?

There is in everything the Act of the Essence and the Act going out from the Essence: the first Act is the thing itself in its realized identity, the second Act is an inevitably following outgo from the first, an emanation distinct from the thing itself.

Thus even in fire there is the warmth comported by its essential nature and there is the warmth going instantaneously outward from that characterizing heat by the fact that the fire, remaining unchangeably fire, utters the Act native to its essential reality.

So it is in the divine also: or rather we have there the earlier form of the double act: the divine remains in its own unchanging being, but from its perfection and from the Act included in its nature there emanates the secondary or issuing Act which- as the output of a mighty power, the mightiest there is- attains to Real Being as second to that which stands above all Being. That transcendent was the potentiality of the All; this secondary is the All made actual.

And if this is all things, that must be above and outside of all, so, must transcend real being. And again, if that secondary is all things, and if above its multiplicity there is a unity not ranking among those things, once more this unity transcends Real Being and therefore transcends the Intellectual-Principle as well. There is thus something transcending Intellectual-Principle, for we must remember that real being is no corpse, the negation of life and of intellection, but is in fact identical with the Intellectual-Principle. The Intellectual-Principle is not something taking cognisance of things as sensation deals with sense objects existing independently of sense: on the contrary, it actually is the things it knows: the ideas constituting them it has not borrowed: whence could it have taken them? No: it exists here together with the things of the universe, identical with them, making a unity with them; and the collective knowledge [in the divine mind] of the immaterial is the universe of things.

FIFTH TRACTATE.

THAT THE INTELLECTUAL BEINGS ARE NOT OUTSIDE

THE INTELLECTUAL-PRINCIPLE: AND ON

THE NATURE OF THE GOOD.

1. The Intellectual-Principle, the veritably and essentially intellectual, can this be conceived as ever falling into error, ever failing to think reality?

Assuredly no: it would no longer be intelligent and therefore no longer Intellectual-Principle: it must know unceasingly- and never forget; and its knowledge can be no guesswork, no hesitating assent, no acceptance of an alien report. Nor can it call on demonstration or, we are told it may at times act by this or, I method, at least there must be something patent to it in virtue of its own nature. In actual fact reason tells us that all its knowledge is thus inherent to it, for there is no means by which to distinguish between the spontaneous knowledge and the other. But, in any case, some knowledge, it is conceded, is inherent to it. Whence are we to understand the certainty of this

knowledge to come to it or how do its objects carry the conviction of their reality?

Consider sense-knowledge: its objects seem most patently certified, yet the doubt returns whether the apparent reality may not lie in the states of the percipient rather than in the material before him; the decision demands intelligence or reasoning. Besides, even granting that what the senses grasp is really contained in the objects, none the less what is thus known by the senses is an image: sense can never grasp the thing itself; this remains for ever outside.

Now, if the Intellectual-Principle in its act- that is in knowing the intellectual- is to know these its objects as alien, we have to explain how it makes contact with them: obviously it might never come upon them, and so might never know them; or it might know them only upon the meeting: its knowing, at that, would not be an enduring condition. If we are told that the Intellectual-Principle and the Intellectual Objects are linked in a standing unity, we demand the description of this unity.

Next, the intellections would be impressions, that is to say not native act but violence from without: now how is such impressing possible and what shape could the impressions bear?

Intellection, again, becomes at this a mere handling of the external, exactly like sense-perception. What then distinguishes it unless that it deals with objects of less extension? And what certitude can it have that its knowledge is true? Or what enables it to pronounce that the object is good, beautiful, or just, when each of these ideas is to stand apart from itself? The very principles of judgement, by which it must be guided, would be [as Ideas] excluded: with objects and canons alike outside it, so is truth.

Again; either the objects of the Intellectual-Principle are senseless and devoid of life and intellect or they are in possession of Intellect.

Now, if they are in possession of Intellect, that realm is a union of both and is Truth. This combined Intellectual realm will be the Primal Intellect: we have only then to examine how this reality, conjoint of Intellectual-Principle and its object, is to be understood, whether as combining self-united identity with yet duality and difference, or what other relation holds between them.

If on the contrary the objects of Intellectual-Principle are without intelligence and life, what are they? They cannot be premises, axioms or predicates: as predicates they would not have real existence; they would be affirmations linking separate entities, as when we affirm that justice is good though justice and good are distinct realities.

If we are told that they are self-standing entities- the distinct beings Justice and Good- then [supposing them to be outside] the Intellectual Realm will not be a unity nor be included in any unity: all is sundered individuality. Where, then, are they and what spatial distinction keeps them apart? How does the Intellectual-Principle come to meet with them as it travels round; what keeps each true to its character; what gives them enduring identity; what conceivable shape or character can they have? They are being

presented to us as some collection of figures, in gold or some other material substance, the work of some unknown sculptor or graver: but at once the Intellectual-Principle which contemplates them becomes sense-perception; and there still remains the question how one of them comes to be Justice and another something else.

But the great argument is that if we are to allow that these objects of Intellection are in the strict sense outside the Intellectual-Principle, which, therefore, must see them as external, then inevitably it cannot possess the truth of them.

In all it looks upon, it sees falsely; for those objects must be the authentic things; yet it looks upon them without containing them and in such knowledge holds only their images; that is to say, not containing the authentic, adopting phantasms of the true, it holds the false; it never possesses reality. If it knows that it possesses the false, it must confess itself excluded from the truth; if it fails of this knowledge also, imagining itself to possess the truth which has eluded it, then the doubled falsity puts it the deeper into error.

It is thus, I suppose, that in sense-perception we have belief instead of truth; belief is our lief; we satisfy ourselves with something very different from the original which is the occasion of perception.

In fine, there would be on the hypothesis no truth in the Intellectual-Principle. But such an Intellectual-Principle would not be truth, nor truly an Intellectual-Principle. There would be no Intellectual-Principle at all [no Divine Mind]: yet elsewhere truth cannot be.

2. Thus we may not look for the Intellectual objects [the Ideas] outside of the Intellectual-Principle, treating them as impressions of reality upon it: we cannot strip it of truth and so make its objects unknowable and non-existent and in the end annul the Intellectual-Principle itself. We must provide for knowledge and for truth; we must secure reality; being must become knowable essentially and not merely in that knowledge of quality which could give us a mere image or vestige of the reality in lieu of possession, intimate association, absorption.

The only way to this is to leave nothing out side of the veritable Intellectual-Principle which thus has knowledge in the true knowing [that of identification with the object], cannot forget, need not go wandering in search. At once truth is there, this is the seat of the authentic Existents, it becomes living and intellective: these are the essentials of that most lofty Principle; and, failing them, where is its worth, its grandeur?

Only thus [by this inherence of the Ideas] is it dispensed from demonstration and from acts of faith in the truth of its knowledge: it is its entire self, self-perspicuous: it knows a prior by recognising its own source; it knows a sequent to that prior by its self-identity; of the reality of this sequent, of the fact that it is present and has authentic existence, no outer entity can bring it surer conviction.

Thus veritable truth is not accordance with an external; it is self-accordance; it affirms and is nothing other than itself and is nothing other; it is at once existence and

self-affirmation. What external, then, can call it to the question, and from what source of truth could the refutation be brought? Any counter affirmation [of truth] must fall into identity with the truth which first uttered itself; brought forward as new, it has to appear before the Principle which made the earlier statement and to show itself identical with that: for there is no finding anything truer than the true.

3. Thus we have here one identical Principle, the Intellect, which is the universe of authentic beings, the Truth: as such it is a great god or, better, not a god among gods but the Godhead entire. It is a god, a secondary god manifesting before there is any vision of that other, the Supreme which rests over all, enthroned in transcendence upon that splendid pediment, the Nature following close upon it.

The Supreme in its progress could never be borne forward upon some soulless vehicle nor even directly upon the soul: it will be heralded by some ineffable beauty: before the great King in his progress there comes first the minor train, then rank by rank the greater and more exalted, closer to the King the kinglier; next his own honoured company until, last among all these grandeurs, suddenly appears the Supreme Monarch himself, and all- unless indeed for those who have contented themselves with the spectacle before his coming and gone away- prostrate themselves and hail him.

In that royal progress the King is of another order from those that go before him, but the King in the Supreme is no ruler over externs; he holds that most just of governances, rooted in nature, the veritable kingship, for he is King of Truth, holding sway by all reason over a dense offspring his own, a host that shares his divinity, King over a king and over kings and even more justly called father of Gods.

[Interpolation: Zeus (Universal Soul) is in this a symbol of him, Zeus who is not content with the contemplation of his father (Kronos, divine Intellect) but looks to that father's father (to Ouranos, the Transcendent) as what may be called the divine energy working to the establishment of a real being.]

4. We have said that all must be brought back to a unity: this must be an authentic unity, not belonging to the order in which multiplicity is unified by participation in what is truly a One; we need a unity independent of participation, not a combination in which multiplicity holds an equal place: we have exhibited, also, the Intellectual Realm and the Intellectual-Principle as more closely a unity than the rest of things, so that there is nothing closer to The One. Yet even this is not The purely One.

This purely One, essentially a unity untouched by the multiple, this we now desire to penetrate if in any way we may.

Only by a leap can we reach to this One which is to be pure of all else, halting sharp in fear of slipping ever so little aside and impinging on the dual: for if we fail of the centre, we are in a duality which does not even include The authentic One but belongs on both sides, to the later order. The One does not bear to be numbered in with anything else, with a one or a two or any such quantity; it refuses to take number because it is measure and not the measured; it is no peer of other entities to be found among them;

for thus, it and they alike would be included in some container and this would be its prior, the prior it cannot have. Not even essential [ideal or abstract] number can belong to The One and certainly not the still later number applying to quantities; for essential number first appears as providing duration to the divine Intellection, while quantitative number is that [still later and lower] which furnishes the Quantity found in conjunction with other things or which provides for Quantity independent of things, if this is to be thought of as number at all. The Principle which in objects having quantitative number looks to the unity from which they spring is a copy [or lower phase] of the Principle which in the earlier order of number [in essential or ideal number] looks to the veritable One; and it attains its existence without in the least degree dissipating or shattering that prior unity: the dyad has come into being, but the precedent monad still stands; and this monad is quite distinct within the dyad from either of the two constituent unities, since there is nothing to make it one rather than the other: being neither, but simply that thing apart, it is present without being inherent.

But how are the two unities distinct and how is the dyad a unity, and is this unity the same as the unity by which each of the constituents is one thing?

Our answer must be that the unity is that of a participation in the primal unity with the participants remaining distinct from that in which they partake; the dyad, in so far as it is one thing, has this participation, but in a certain degree only; the unity of an army is not that of a single building; the dyad, as a thing of extension, is not strictly a unit either quantitatively or in manner of being.

Are we then to take it that the monads in the pentad and decad differ while the unity in the pentad is the same as that in the decad?

Yes, in the sense in which, big and little, ship is one with ship, army with army, city with city; otherwise, no. But certain difficulties in this matter will be dealt with later.

5. We return to our statement that The First remains intact even when other entities spring from it.

In the case of numbers, the unit remains intact while something else produces, and thus number arises in dependence on the unit: much more then does the unit, The One, remain intact in the principle which is before all beings; especially since the entities produced in its likeness, while it thus remains intact, owe their existence to no other, but to its own all-sufficient power.

And just as there is, primarily or secondarily, some form or idea from the monad in each of the successive numbers- the later still participating, though unequally, in the unit- so the series of Beings following upon The First bear, each, some form or idea derived from that source. In Number the participation establishes Quantity; in the realm of Being, the trace of The One establishes reality: existence is a trace of The One- our word for entity may probably be connected with that for unity.

What we know as Being, the first sequent upon The One, advanced a little outward, so

to speak, then chose to go no further, turned inward again and comes to rest and is now the reality and hearth [ousia and hestia] of the universe. Pressing [with the rough breathing] on the word for Being [on] we have the word "hen" [one], an indication that in our very form of speech we tell, as far as may be, that Being [the weaker] is that which proceeds from [the stronger] The One. Thus both the thing that comes to be and Being itself are carriers of a copy, since they are outflows from the power of The primal One: this power sees and in its emotion tries to represent what it sees and breaks into speech "On"; "einai"; "ousia," "hestia" [Existent: Existence: Essence: Hestia or Hearth], sounds which labour to express the essential nature of the universe produced by the travail of the utterer and so to represent, as far as sounds may, the origin of reality.

6. All this, however, we may leave to individual judgement: to proceed:

This produced reality is an Ideal form- for certainly nothing springing from the Supreme can be less- and it is not a particular form but the form of all, beside which there is no other; it follows that The First must be without form, and, if without form, then it is no Being; Being must have some definition and therefore be limited; but the First cannot be thought of as having definition and limit, for thus it would be not the Source but the particular item indicated by the definition assigned to it. If all things belong to the produced, which of them can be thought of as the Supreme? Not included among them, this can be described only as transcending them: but they are Being and the Beings; it therefore transcends Being.

Note that the phrase transcending Being assigns no character, makes no assertion, allots no name, carries only the denial of particular being; and in this there is no attempt to circumscribe it: to seek to throw a line about that illimitable Nature would be folly, and anyone thinking to do so cuts himself off from any slightest and most momentary approach to its least vestige.

As one wishing to contemplate the Intellectual Nature will lay aside all the representations of sense and so may see what transcends the sense-realm, in the same way one wishing to contemplate what transcends the Intellectual attains by putting away all that is of the intellect, taught by the intellect, no doubt, that the Transcendent exists but never seeking to define it.

Its definition, in fact, could be only "the indefinable": what is not a thing is not some definite thing. We are in agony for a true expression; we are talking of the untellable; we name, only to indicate for our own use as best we may. And this name, The One, contains really no more than the negation of plurality: under the same pressure the Pythagoreans found their indication in the symbol "Apollo" [a= not; pollon= of many] with its repudiation of the multiple. If we are led to think positively of The One, name and thing, there would be more truth in silence: the designation, a mere aid to enquiry, was never intended for more than a preliminary affirmation of absolute simplicity to be followed by the rejection of even that statement: it was the best that offered, but remains inadequate to express the Nature indicated. For this is a principle not to be conveyed by any sound; it cannot be known on any hearing but, if at all, by vision; and to hope in that vision to see a form is to fail of even that.

7. Consider the act of ocular vision:

There are two elements here; there is the form perceptible to the sense and there is the medium by which the eye sees that form. This medium is itself perceptible to the eye, distinct from the form to be seen, but the cause of the seeing; it is perceived at the one stroke in that form and on it and, hence, is not distinguished from it, the eye being held entirely by the illuminated object. When on the contrary this medium presents itself alone it is seen directly- though even then actual sight demands some solid base; there must be something besides the medium which, unless embracing some object, eludes perception; thus the light inherent to the sun would not be perceived but for the solidity of the mass. If it is objected that the sun is light entire, this would only be a proof of our assertion: no other visible form will contain light which must, then, have no other property than that of visibility, and in fact all other visible objects are something more than light alone.

So it is with the act of vision in the Intellectual Principle.

This vision sees, by another light, the objects illuminated by the First Principle: setting itself among them, it sees veritably; declining towards the lower Nature, that upon which the light from above rests, it has less of that vision. Passing over the visible and looking to the medium by which it sees, then it holds the Light and the source of Light.

But since the Intellectual-Principle is not to see this light as something external we return to our analogy; the eye is not wholly dependent upon an outside and alien light; there is an earlier light within itself, a more brilliant, which it sees sometimes in a momentary flash. At night in the darkness a gleam leaps from within the eye: or again we make no effort to see anything; the eyelids close; yet a light flashes before us; or we rub the eye and it sees the light it contains. This is sight without the act, but it is the truest seeing, for it sees light whereas its other objects were the lit not the light.

It is certainly thus that the Intellectual-Principle, hiding itself from all the outer, withdrawing to the inmost, seeing nothing, must have its vision- not of some other light in some other thing but of the light within itself, unmingled, pure, suddenly gleaming before it;

8. So that we are left wondering whence it came, from within or without; and when it has gone, we say, "It was here. Yet no; it was beyond!" But we ought not to question whence; there is no whence, no coming or going in place; now it is seen and now not seen. We must not run after it, but fit ourselves for the vision and then wait tranquilly for its appearance, as the eye waits on the rising of the sun, which in its own time appears above the horizon- out of the ocean, as the poets say- and gives itself to our sight.

This Principle, of which the sun is an image, where has it its dawning, what horizon does it surmount to appear?

It stands immediately above the contemplating Intellect which has held itself at rest

towards the vision, looking to nothing else than the good and beautiful, setting its entire being to that in a perfect surrender, and now tranquilly filled with power and taking a new beauty to itself, gleaming in the light of that presence.

This advent, still, is not by expectation: it is a coming without approach; the vision is not of something that must enter but of something present before all else, before the Intellect itself made any movement. Yet it is the Intellect that must move, to come and to go- going because it has not known where it should stay and where that presence stays, the nowhere contained.

And if the Intellect, too, could hold itself in that nowhere- not that it is ever in place; it too is uncontained, utterly unplaced- it would remain for ever in the vision of its prior, or, indeed, not in vision but in identity, all duality annulled. But it is Intellect [having a sphere of its own] and, when it is to see, it must see by that in it which is not Intellect [by its divinest power].

No doubt it is wonderful that The First should thus be present without any coming, and that, while it is nowhere, nowhere is it not; but wonderful though this be in itself, the contrary would be more wonderful to those who know. Of course neither this contrary nor the wonder at it can be entertained. But we must explain:

9. Everything brought into being under some principle not itself is contained either within its maker or, if there is any intermediate, within that: having a prior essential to its being, it needs that prior always, otherwise it would not be contained at all. It is the order of nature: The last in the immediately preceding lasts, things of the order of the Firsts within their prior-firsts, and so thing within thing up to the very pinnacle of source.

That Source, having no prior, cannot be contained: uncontained by any of those other forms of being, each held within the series of priors, it is orb'd round all, but so as not to be pointed off to hold them part for part; it possesses but is not possessed. Holding all- though itself nowhere held- it is omnipresent, for where its presence failed something would elude its hold. At the same time, in the sense that it is nowhere held, it is not present: thus it is both present and not present; not present as not being circumscribed by anything; yet, as being utterly unattached, not inhibited from presence at any point. That inhibition would mean that the First was determined by some other being; the later series, then, would be without part in the Supreme; God has His limit and is no longer self-governed but mastered by inferiors.

While the contained must be where its container is, what is uncontained by place is not debarred from any: for, imagine a place where it is not and evidently some other place retains it; at once it is contained and there is an end of its placelessness.

But if the "nowhere" is to stand and the ascription of a "where," implying station in the extern, is to fall, then nothing can be left void; and at once- nothing void, yet no point containing- God is sovereignly present through all. We cannot think of something of God here and something else there, nor of all God gathered at some one spot: there is an instantaneous presence everywhere, nothing containing and nothing left void,

everything therefore fully held by the divine.

Consider our universe. There is none before it and therefore it is not, itself, in a universe or in any place- what place was there before the universe came to be?- its linked members form and occupy the whole. But Soul is not in the universe, on the contrary the universe is in the Soul; bodily substance is not a place to the Soul; Soul is contained in Intellectual-Principle and is the container of body. The Intellectual-Principle in turn is contained in something else; but that prior principle has nothing in which to be: the First is therefore in nothing, and, therefore, nowhere. But all the rest must be somewhere; and where but in the First?

This can mean only that the First is neither remote from things nor directly within them; there is nothing containing it; it contains all. It is The Good to the universe if only in this way, that towards it all things have their being, all dependent upon it, each in its mode, so that thing rises above thing in goodness according to its fuller possession of authentic being.

10. Still, do not, I urge you, look for The Good through any of these other things; if you do, you will see not itself but its trace: you must form the idea of that which is to be grasped cleanly standing to itself not in any combination, the unheld in which all have hold: for no other is such, yet one such there must be.

Now it is clear that we cannot possess ourselves of the power of this principle in its concentrated fulness: so to do one must be identical with it: but some partial attainment is within our reach.

You who make the venture will throw forward all your being but you will never tell it entire- for that, you must yourself be the divine Intellect in Act- and at your utmost success it will still pass from you or, rather, you from it. In ordinary vision you may think to see the object entire: in this intellectual act, all, less or more, that you can take to mind you may set down as The Good.

It is The Good since, being a power [being effective outwardly], it is the cause of the intelligent and intellectual life as of life and intellect: for these grow from it as from the source of essence and of existence, the Source as being One, simplex and first because before it was nothing. All derives from this: it is the origin of the primal movement which it does not possess and of the repose which is but its absence of need; for neither rest nor movement can belong to that which has no place in which either could occur; centre, object, ground, all are alike unknown to it, for it is before all. Yet its Being is not limited; what is there to set bounds to it? Nor, on the other hand, is it infinite in the sense of magnitude; what place can there be to which it must extend, or why should there be movement where there is no lacking? All its infinitude resides in its power: it does not change and will not fail; and in it all that is unfailing finds duration.

11. It is infinite also by right of being a pure unity with nothing towards which to direct any partial content. Absolutely One, it has never known measure and stands outside of number, and so is under no limit either in regard to any extern or within itself; for any

such determination would bring something of the dual into it. And having no constituent parts it accepts no pattern, forms no shape.

Reason recognising it as such a nature, you may not hope to see it with mortal eyes, nor in any way that would be imagined by those who make sense the test of reality and so annul the supremely real. For what passes for the most truly existent is most truly non-existent- the thing of extension least real of all- while this unseen First is the source and principle of Being and sovereign over Reality.

You must turn appearances about or you will be left void of God. You will be like those at the festivals who in their gluttony cram themselves with things which none going to the gods may touch; they hold these goods to be more real than the vision of the God who is to be honoured and they go away having had no share in the sanctities of the shrine.

In these celebrations of which we speak, the unseen god leaves those in doubt of his existence who think nothing patent but what may be known to the flesh: it happens as if a man slept a life through and took the dream world in perfect trust; wake him, and he would refuse belief to the report of his open eyes and settle down to sleep again.

12. Knowing demands the organ fitted to the object; eyes for one kind, ears for another: similarly some things, we must believe, are to be known by the Intellectual-Principle in us. We must not confuse intellection with hearing or seeing; this would be trying to look with the ears or denying sound because it is not seen. Certain people, we must keep in mind, have forgotten that to which, from the beginning onwards, their longing and effort are pointed: for all that exists desires and aspires towards the Supreme by a compulsion of nature, as if all had received the oracle that without it they cannot be.

The perception of Beauty and the awe and the stirring of passion towards it are for those already in some degree knowing and awakened: but the Good, as possessed long since and setting up a natural tendency, is inherently present to even those asleep and brings them no wonder when some day they see it, since it is no occasional reminiscence but is always with them though in their drowse they are not aware of it: the love of Beauty on the contrary sets up pain when it appears, for those that have seen it must pursue. This love of Beauty then is later than the love of Good and comes with a more sophisticated understanding; hence we know that Beauty is a secondary: the more primal appetite, not patent to sense, our movement towards our good, gives witness that The Good is the earlier, the prior.

Again; all that have possessed themselves of The Good feel it sufficient: they have attained the end: but Beauty not all have known and those that have judge it to exist for itself and not for them, as in the charm of this world the beauty belongs only to its possessor.

Then, too, it is thought enough to appear loveable whether one is so or not: but no one wants his Good in semblance only. All are seeking The First as something ranking before aught else, but they struggle venomously for beauty as something secondary like

themselves: thus some minor personage may perhaps challenge equal honour with the King's right-hand man on pretext of similar dependence, forgetting that, while both owe their standing to the monarch, the other holds the higher rank.

The source of the error is that while both The Good and The Beautiful participate in the common source, The One precedes both; and that, in the Supreme also, The Good has no need of The Beautiful, while the Beautiful does need The Good.

The Good is gentle and friendly and tender, and we have it present when we but will. Beauty is all violence and stupefaction; its pleasure is spoiled with pain, and it even draws the thoughtless away from The Good as some attraction will lure the child from the father's side: these things tell of youth. The Good is the older- not in time but by degree of reality- and it has the higher and earlier power, all power in fact, for the sequent holds only a power subordinate and delegated of which the prior remains sovereign.

Not that God has any need of His derivatives: He ignores all that produced realm, never necessary to Him, and remains identically what He was before He brought it into being. So too, had the secondary never existed, He would have been unconcerned, exactly as He would not have grudged existence to any other universe that might spring into being from Him, were any such possible; of course no other such could be since there is nothing that has not existence once the All exists.

But God never was the All; that would make Him dependent upon the universe: transcending all, He was able at once to make all things and to leave them to their own being, He above.

13. The Supreme, as the Absolute Good and not merely a good being or thing, can contain nothing, since there is nothing that could be its good.

Anything it could contain must be either good to it or not good; but in the supremely and primally Good there can be nothing not good; nor can the Absolute Good be a container to the Good: containing, then, neither the good nor the not good it contains nothing and, containing nothing, it is alone: it is void of all but itself.

If the rest of being either is good- without being the absolute good- or is not good, while on the other hand the Supreme contains neither what is good nor what is not good, then, containing nothing, it is The Good by that very absence of content.

Thus we rob it of its very being as The Absolute Good if we ascribe anything to it, existence or intellect or goodness. The only way is to make every denial and no assertion, to feign no quality or content there but to permit only the "It is" in which we pretend to no affirmation of non-existent attribute: there is an ignorant praise which, missing the true description, drags in qualities beneath the real worth and so abases; philosophy must guard against attaching to the Supreme what is later and lower: moving above all that order, it is the cause and source of all these, and is none of them.

For, once more, the nature of the Good is not such as to make it all things or a thing among all: that would range it under the same classification with them all and it would differ, thus, only by its individual quality, some specialty, some addition. At once it becomes not a unity but a duality; there is one common element not good and another element that is good; but a combination so made up of good and not good cannot be the purely good, the primarily good; the primarily good must be that principle in which the better element has more effectively participated and so attained its goodness. Any good thing has become so by communion; but that in which it has communion is not a thing among the things of the all; therefore the Good is not a thing of the All.

Since there is this Good in any good thing- the specific difference by which the combination becomes good- it must enter from elsewhere than the world of things: that source must be a Good absolute and isolated.

Thus is revealed to us the Primarily existent, the Good, above all that has being, good unalloyed, containing nothing in itself, utterly unmingling, all-transcending, cause of all.

Certainly neither Being nor Beauty springs from evil or from the neutral; the maker, as the more consummate, must surpass the made.

SIXTH TRACTATE.

THAT THE PRINCIPLE TRANSCENDING BEING HAS

NO INTELLECTUAL ACT. WHAT BEING HAS

INTELLECTION PRIMALLY AND WHAT

BEING HAS IT SECONDARILY.

1. There is a principle having intellection of the external and another having self-intellection and thus further removed from duality.

Even the first mentioned is not without an effort towards the pure unity of which it is not so capable: it does actually contain its object, though as something other than itself.

In the self-intellective, there is not even this distinction of being: self-conversing, the subject is its own object, and thus takes the double form while remaining essentially a unity. The intellection is the more profound for this internal possession of the object.

This principle is the primally intellective since there can be no intellection without duality in unity. If there is no unity, perceiving principle and perceived object will be different, and the intellection, therefore, not primal: a principle concerned with something external cannot be the primally intellective since it does not possess the object as integrally its own or as itself; if it does possess the object as itself- the condition of true intellection- the two are one. Thus [in order to primal intellection] there must be a unity in duality, while a pure unity with no counterbalancing duality can have no object for its intellection

and ceases to be intellective: in other words the primally intellective must be at once simplex and something else.

But the surest way of realizing that its nature demands this combination of unity and duality is to proceed upwards from the Soul, where the distinction can be made more dearly since the duality is exhibited more obviously.

We can imagine the Soul as a double light, a lesser corresponding to the soul proper, a purer representing its intellective phase; if now we suppose this intellective light equal to the light which is to be its object, we no longer distinguish between them; the two are recognised as one: we know, indeed, that there are two, but as we see them they have become one: this gives us the relation between the intellective subject and the object of intellection [in the duality and unity required by that primal intellection]: in our thought we have made the two into one; but on the other hand the one thing has become two, making itself into a duality at the moment of intellection, or, to be more exact, being dual by the fact of intellection and single by the fact that its intellectual object is itself.

2. Thus there is the primally intellective and there is that in which intellection has taken another mode; but this indicates that what transcends the primarily intellective has no intellection; for, to have intellection, it must become an Intellectual-Principle, and, if it is to become that, it must possess an intellectual object and, as primarily intellective, it must possess that intellectual object as something within itself.

But it is not inevitable that every intellectual object should both possess the intellective principle in itself and exercise intellection: at that, it would be not merely object but subject as well and, besides, being thus dual, could not be primal: further, the intellectual principle that is to possess the intellectual object could not cohere unless there existed an essence purely intellectual, something which, while standing as intellectual object to the intellectual principle, is in its own essence neither an agent nor an object of intellection. The intellectual object points to something beyond itself [to a percipient]; and the intellectual agent has its intellection in vain unless by seizing and holding an object- since, failing that, it can have no intellection but is consummated only when it possesses itself of its natural term.

There must have been something standing consummate independently of any intellectual act, something perfect in its own essence: thus that in which this completion is inherent must exist before intellection; in other words it has no need of intellection, having been always self-sufficing: this, then, will have no intellectual act.

Thus we arrive at: a principle having no intellection, a principle having intellection primarily, a principle having it secondarily.

It may be added that, supposing The First to be intellective, it thereby possesses something [some object, some attribute]: at once it ceases to be a first; it is a secondary, and not even a unity; it is a many; it is all of which it takes intellectual possession; even though its intellection fell solely upon its own content, it must still be a manifold.

3. We may be told that nothing prevents an identity being thus multiple. But there must be a unity underlying the aggregate: a manifold is impossible without a unity for its source or ground, or at least, failing some unity, related or unrelated. This unity must be numbered as first before all and can be apprehended only as solitary and self-existent.

When we recognize it, resident among the mass of things, our business is to see it for what it is- present to the items but essentially distinguished from them- and, while not denying it there, to seek this underly of all no longer as it appears in those other things but as it stands in its pure identity by itself. The identity resident in the rest of things is no doubt close to authentic identity but cannot be it; and, if the identity of unity is to be displayed beyond itself, it must also exist within itself alone.

It may be suggested that its existence takes substantial form only by its being resident among outside things: but, at this, it is itself no longer simplex nor could any coherence of manifolds occur. On the one hand things could take substantial existence only if they were in their own virtue simplex. On the other hand, failing a simplex, the aggregate of multiples is itself impossible: for the simplex individual thing could not exist if there were no simplex unity independent of the individual, [a principle of identity] and, not existing, much less could it enter into composition with any other such: it becomes impossible then for the compound universe, the aggregate of all, to exist; it would be the coming together of things that are not, things not merely lacking an identity of their own but utterly non-existent.

Once there is any manifold, there must be a precedent unity: since any intellection implies multiplicity in the intellective subject, the non-multiple must be without intellection; that non-multiple will be the First: intellection and the Intellectual-Principle must be characteristic of beings coming later.

4. Another consideration is that if The Good [and First] is simplex and without need, it can neither need the intellective act nor possess what it does not need: it will therefore not have intellection. (Interpolation or corruption: It is without intellection because, also, it contains no duality.)

Again; an Intellectual-Principle is distinct from The Good and takes a certain goodness only by its intellection of The Good.

Yet again: In any dual object there is the unity [the principle of identity] side by side with the rest of the thing; an associated member cannot be the unity of the two and there must be a self-standing unity [within the duality] before this unity of members can exist: by the same reasoning there must be also the supreme unity entering into no association whatever, something which is unity-simplex by its very being, utterly devoid of all that belongs to the thing capable of association.

How could anything be present in anything else unless in virtue of a source existing independently of association? The simplex [or absolute] requires no derivation; but any manifold, or any dual, must be dependent.

We may use the figure of, first, light; then, following it, the sun; as a third, the orb of the moon taking its light from the sun: Soul carries the Intellectual-Principle as something imparted and lending the light which makes it essentially intellective; Intellectual-Principle carries the light as its own though it is not purely the light but is the being into whose very essence the light has been received; highest is That which, giving forth the light to its sequent, is no other than the pure light itself by whose power the Intellectual-Principle takes character.

How can this highest have need of any other? It is not to be identified with any of the things that enter into association; the self-standing is of a very different order.

5. And again: the multiple must be always seeking its identity, desiring self-accord and self-awareness: but what scope is there within what is an absolute unity in which to move towards its identity or at what term may it hope for self-knowing? It holds its identity in its very essence and is above consciousness and all intellective act. Intellection is not a primal either in the fact of being or in the value of being; it is secondary and derived: for there exists The Good; and this moves towards itself while its sequent is moved and by that movement has its characteristic vision. The intellective act may be defined as a movement towards The Good in some being that aspires towards it; the effort produces the fact; the two are coincident; to see is to have desired to see: hence again the Authentic Good has no need of intellection since itself and nothing else is its good.

The intellective act is a movement towards the unmoved Good: thus the self-intellection in all save the Absolute Good is the working of the imaged Good within them: the intellectual principle recognises the likeness, sees itself as a good to itself, an object of attraction: it grasps at that manifestation of The Good and, in holding that, holds self-vision: if the state of goodness is constant, it remains constantly self-attractive and self-intellective. The self-intellection is not deliberate: it sees itself as an incident in its contemplation of The Good; for it sees itself in virtue of its Act; and, in all that exists, the Act is towards The Good.

6. If this reasoning is valid, The Good has no scope whatever for intellection which demands something attractive from outside. The Good, then, is without Act. What Act indeed, could be vested in Activity's self? No activity has yet again an activity; and whatever we may add to such Activities as depend from something else, at least we must leave the first Activity of them all, that from which all depend, as an uncontaminated identity, one to which no such addition can be made.

That primal Activity, then, is not an intellection, for there is nothing upon which it could Exercise intellection since it is The First; besides, intellection itself does not exercise the intellective act; this belongs to some principle in which intellection is vested. There is, we repeat, duality in any thinking being; and the First is wholly above the dual.

But all this may be made more evident by a clearer recognition of the twofold principle at work wherever there is intellection:

When we affirm the reality of the Real Beings and their individual identity of being and declare that these Real Beings exist in the Intellectual Realm, we do not mean merely that they remain unchangeably self-identical by their very essence, as contrasted with the fluidity and instability of the sense-realm; the sense-realm itself may contain the enduring. No; we mean rather that these principles possess, as by their own virtue, the consummate fulness of being. The Essence described as the primally existent cannot be a shadow cast by Being, but must possess Being entire; and Being is entire when it holds the form and idea of intellection and of life. In a Being, then, the existence, the intellection, the life are present as an aggregate. When a thing is a Being, it is also an Intellectual-Principle, when it is an Intellectual-Principle it is a Being; intellection and Being are co-existents. Therefore intellection is a multiple not a unitary and that which does not belong to this order can have no Intellection. And if we turn to the partial and particular, there is the Intellectual form of man, and there is man, there is the Intellectual form of horse and there is horse, the Intellectual form of Justice, and Justice.

Thus all is dual: the unit is a duality and yet again the dual reverts to unity.

That, however, which stands outside all this category can be neither an individual unity nor an aggregate of all the duals or in any way a duality. How the duals rose from The One is treated elsewhere.

What stands above Being stands above intellection: it is no weakness in it not to know itself, since as pure unity it contains nothing which it needs to explore. But it need not even spend any knowing upon things outside itself: this which was always the Good of all gives them something greater and better than its knowledge of them in giving them in their own identity to cling, in whatever measure be possible, to a principle thus lofty.

SEVENTH TRACTATE.

IS THERE AN IDEAL ARCHETYPE OF

PARTICULAR BEINGS?

1. We have to examine the question whether there exists an ideal archetype of individuals, in other words whether I and every other human being go back to the Intellectual, every [living] thing having origin and principle There.

If Socrates, Socrates' soul, is external then the Authentic Socrates- to adapt the term- must be There; that is to say, the individual soul has an existence in the Supreme as well as in this world. If there is no such permanent endurance and what was Socrates may with change of time become another soul and be Pythagoras or someone else- then the individual Socrates has not that existence in the Divine.

But if the Soul of the individual contains the Reason-Principles of all that it traverses, once more all men have their [archetypic] existence There: and it is our doctrine that every soul contains all the Reason-Principles that exist in the Kosmos: since then the

Kosmos contains the Reason-Principles not merely of man, but also of all individual living things, so must the Soul. Its content of Reason-Principles, then, must be limitless, unless there be a periodical renovation bounding the boundlessness by the return of a former series.

But if [in virtue of this periodic return] each archetype may be reproduced by numerous existents, what need is there that there be distinct Reason-Principles and archetypes for each existent in any one period? Might not one [archetypal] man suffice for all, and similarly a limited number of souls produce a limitless number of men?

No: one Reason-Principle cannot account for distinct and differing individuals: one human being does not suffice as the exemplar for many distinct each from the other not merely in material constituents but by innumerable variations of ideal type: this is no question of various pictures or images reproducing an original Socrates; the beings produced differ so greatly as to demand distinct Reason-Principles. The entire soul-period conveys with it all the requisite Reason-Principles, and so too the same existents appear once more under their action.

There is no need to balk at this limitlessness in the Intellectual; it is an infinitude having nothing to do with number or part; what we may think of it as its outgoing is no other than its characteristic Act.

2. But individuals are brought into being by the union of the Reason-Principles of the parents, male and female: this seems to do away with a definite Reason-Principle for each of the offspring: one of the parents- the male let us say- is the source; and the offspring is determined not by Reason-Principles differing from child to child but by one only, the father's or that of the father's father.

No: a distinct Reason-Principle may be the determinant for the child since the parent contains all: they would become effective at different times.

And so of the differences among children of the same parents: it is a matter of varying dominance: either the offspring- whether it so appears or not- has been mainly determined by, now, the male, now, the female or, while each principle has given itself entire and lies there within, yet it effectively moulds one portion of the bodily substance rather than another.

And how [by the theory of a divine archetype of each individual] are the differences caused by place to be explained?

Is the differentiating element to be found in the varying resistance of the material of the body?

No: if this were so, all men with the exception of one only would be untrue to nature.

Difference everywhere is a good, and so there must be differing archetypes, though only to evil could be attribute any power in Matter to thwart nature by overmastering the

perfect Reason-Principles, hidden but given, all.

Still, admitting the diversity of the Reason-principles, why need there be as many as there are men born in each Period, once it is granted that different beings may take external manifestation under the presence of the same principles?

Under the presence of all; agreed: but with the dominance of the very same? That is still open to question.

May we not take it that there may be identical reproduction from one Period to another but not in the same Period?

3. In the case of twin birth among human beings how can we make out the Reason-Principles to be different; and still more when we turn to the animals and especially those with litters?

Where the young are precisely alike, there is one Reason-Principle.

But this would mean that after all there are not as many Reason Principles as separate beings?

As many as there are of differing beings, differing by something more than a mere failure in complete reproduction of their Idea.

And why may not this [sharing of archetype] occur also in beings untouched by differentiation, if indeed there be any such?

A craftsman even in constructing an object identical with a model must envisage that identity in a mental differentiation enabling him to make a second thing by bringing in some difference side by side with the identity: similarly in nature, where the thing comes about not by reasoning but in sole virtue of Reason-Principles, that differentiation must be included in the archetypal idea, though it is not in our power to perceive the difference.

The consideration of Quantity brings the same result:

If production is undetermined in regard to Quantity, each thing has its distinct Reason-Principle: if there is a measured system the Quantity has been determined by the unrolling and unfolding of the Reason-Principles of all the existences.

Thus when the universe has reached its term, there will be a fresh beginning, since the entire Quantity which the Kosmos is to exhibit, every item that is to emerge in its course, all is laid up from the first in the Being that contains the Reason-Principles.

Are we, then, looking to the brute realm, to hold that there are as many Reason-Principles as distinct creatures born in a litter?

Why not? There is nothing alarming about such limitlessness in generative forces and in Reason-Principles, when Soul is there to sustain all.

As in Soul [principle of Life] so in Divine Mind [principle of Idea] there is this infinitude of recurring generative powers; the Beings there are unfailing.

EIGHTH TRACTATE.

ON THE INTELLECTUAL BEAUTY.

1. It is a principle with us that one who has attained to the vision of the Intellectual Beauty and grasped the beauty of the Authentic Intellect will be able also to come to understand the Father and Transcendent of that Divine Being. It concerns us, then, to try to see and say, for ourselves and as far as such matters may be told, how the Beauty of the divine Intellect and of the Intellectual Kosmos may be revealed to contemplation.

Let us go to the realm of magnitudes: Suppose two blocks of stone lying side by side: one is unpatterned, quite untouched by art; the other has been minutely wrought by the craftsman's hands into some statue of god or man, a Grace or a Muse, or if a human being, not a portrait but a creation in which the sculptor's art has concentrated all loveliness.

Now it must be seen that the stone thus brought under the artist's hand to the beauty of form is beautiful not as stone- for so the crude block would be as pleasant- but in virtue of the form or idea introduced by the art. This form is not in the material; it is in the designer before ever it enters the stone; and the artificer holds it not by his equipment of eyes and hands but by his participation in his art. The beauty, therefore, exists in a far higher state in the art; for it does not come over integrally into the work; that original beauty is not transferred; what comes over is a derivative and a minor: and even that shows itself upon the statue not integrally and with entire realization of intention but only in so far as it has subdued the resistance of the material.

Art, then, creating in the image of its own nature and content, and working by the Idea or Reason-Principle of the beautiful object it is to produce, must itself be beautiful in a far higher and purer degree since it is the seat and source of that beauty, indwelling in the art, which must naturally be more complete than any comeliness of the external. In the degree in which the beauty is diffused by entering into matter, it is so much the weaker than that concentrated in unity; everything that reaches outwards is the less for it, strength less strong, heat less hot, every power less potent, and so beauty less beautiful.

Then again every prime cause must be, within itself, more powerful than its effect can be: the musical does not derive from an unmusical source but from music; and so the art exhibited in the material work derives from an art yet higher.

Still the arts are not to be slighted on the ground that they create by imitation of natural

objects; for, to begin with, these natural objects are themselves imitations; then, we must recognise that they give no bare reproduction of the thing seen but go back to the Ideas from which Nature itself derives, and, furthermore, that much of their work is all their own; they are holders of beauty and add where nature is lacking. Thus Pheidias wrought the Zeus upon no model among things of sense but by apprehending what form Zeus must take if he chose to become manifest to sight.

2. But let us leave the arts and consider those works produced by Nature and admitted to be naturally beautiful which the creations of art are charged with imitating, all reasoning life and unreasoning things alike, but especially the consummate among them, where the moulder and maker has subdued the material and given the form he desired. Now what is the beauty here? It has nothing to do with the blood or the menstrual process: either there is also a colour and form apart from all this, or there is nothing unless sheer ugliness or a bare recipient, as it were the mere Matter of beauty.

Whence shone forth the beauty of Helen, battle-sought; or of all those women like in loveliness to Aphrodite; or of Aphrodite herself; or of any human being that has been perfect in beauty; or of any of these gods manifest to sight, or unseen but carrying what would be beauty if we saw?

In all these is it not the Idea, something of that realm but communicated to the produced from within the producer just as in works of art, we held, it is communicated from the arts to their creations? Now we can surely not believe that, while the made thing and the Idea thus impressed upon Matter are beautiful, yet the Idea not so alloyed but resting still with the creator- the Idea primal, immaterial, firmly a unity- is not Beauty.

If material extension were in itself the ground of beauty, then the creating principle, being without extension, could not be beautiful: but beauty cannot be made to depend upon magnitude since, whether in a large object or a small, the one Idea equally moves and forms the mind by its inherent power. A further indication is that as long as the object remains outside us we know nothing of it; it affects us by entry; but only as an Idea can it enter through the eyes which are not of scope to take an extended mass: we are, no doubt, simultaneously possessed of the magnitude which, however, we take in not as mass but by an elaboration upon the presented form.

Then again the principle producing the beauty must be, itself, ugly, neutral or beautiful: ugly, it could not produce the opposite; neutral, why should its product be the one rather than the other? The Nature, then, which creates things so lovely must be itself of a far earlier beauty; we, undisciplined in discernment of the inward, knowing nothing of it, run after the outer, never understanding that it is the inner which stirs us; we are in the case of one who sees his own reflection but not realizing whence it comes goes in pursuit of it.

But that the thing we are pursuing is something different and that the beauty is not in the concrete object is manifest from the beauty there is in matters of study, in conduct and custom; briefly in soul or mind. And it is precisely here that the greater beauty lies, perceived whenever you look to the wisdom in a man and delight in it, not wasting

attention on the face, which may be hideous, but passing all appearance by and catching only at the inner comeliness, the truly personal; if you are still unmoved and cannot acknowledge beauty under such conditions, then looking to your own inner being you will find no beauty to delight you and it will be futile in that state to seek the greater vision, for you will be questing it through the ugly and impure.

This is why such matters are not spoken of to everyone; you, if you are conscious of beauty within, remember.

3. Thus there is in the Nature-Principle itself an Ideal archetype of the beauty that is found in material forms and, of that archetype again, the still more beautiful archetype in Soul, source of that in Nature. In the proficient soul this is brighter and of more advanced loveliness: adorning the soul and bringing to it a light from that greater light which is beauty primally, its immediate presence sets the soul reflecting upon the quality of this prior, the archetype which has no such entries, and is present nowhere but remains in itself alone, and thus is not even to be called a Reason-Principle but is the creative source of the very first Reason-Principle which is the Beauty to which Soul serves as Matter.

This prior, then, is the Intellectual-Principle, the veritable, abiding and not fluctuant since not taking intellectual quality from outside itself. By what image thus, can we represent it? We have nowhere to go but to what is less. Only from itself can we take an image of it; that is, there can be no representation of it, except in the sense that we represent gold by some portion of gold- purified, either actually or mentally, if it be impure- insisting at the same time that this is not the total thing-gold, but merely the particular gold of a particular parcel. In the same way we learn in this matter from the purified Intellect in ourselves or, if you like, from the Gods and the glory of the Intellect in them.

For assuredly all the Gods are august and beautiful in a beauty beyond our speech. And what makes them so? Intellect; and especially Intellect operating within them [the divine sun and stars] to visibility. It is not through the loveliness of their corporeal forms: even those that have body are not gods by that beauty; it is in virtue of Intellect that they, too, are gods, and as gods beautiful. They do not veer between wisdom and folly: in the immunity of Intellect unmoving and pure, they are wise always, all-knowing, taking cognisance not of the human but of their own being and of all that lies within the contemplation of Intellect. Those of them whose dwelling is in the heavens, are ever in this meditation- what task prevents them?- and from afar they look, too, into that further heaven by a lifting of the head. The Gods belonging to that higher Heaven itself, they whose station is upon it and in it, see and know in virtue of their omnipresence to it. For all There is heaven; earth is heaven, and sea heaven; and animal and plant and man; all is the heavenly content of that heaven: and the Gods in it, despising neither men nor anything else that is there where all is of the heavenly order, traverse all that country and all space in peace.

4. To "live at ease" is There; and, to these divine beings, verity is mother and nurse, existence and sustenance; all that is not of process but of authentic being they see, and themselves in all: for all is transparent, nothing dark, nothing resistant; every being is

lucid to every other, in breadth and depth; light runs through light. And each of them contains all within itself, and at the same time sees all in every other, so that everywhere there is all, and all is all and each all, and infinite the glory. Each of them is great; the small is great; the sun, There, is all the stars; and every star, again, is all the stars and sun. While some one manner of being is dominant in each, all are mirrored in every other.

Movement There is pure [as self-caused] for the moving principle is not a separate thing to complicate it as it speeds.

So, too, Repose is not troubled, for there is no admixture of the unstable; and the Beauty is all beauty since it is not merely resident [as an attribute or addition] in some beautiful object. Each There walks upon no alien soil; its place is its essential self; and, as each moves, so to speak, towards what is Above, it is attended by the very ground from which it starts: there is no distinguishing between the Being and the Place; all is Intellect, the Principle and the ground on which it stands, alike. Thus we might think that our visible sky [the ground or place of the stars], lit, as it is, produces the light which reaches us from it, though of course this is really produced by the stars [as it were, by the Principles of light alone, not also by the ground as the analogy would require].

In our realm all is part rising from part and nothing can be more than partial; but There each being is an eternal product of a whole and is at once a whole and an individual manifesting as part but, to the keen vision There, known for the whole it is.

The myth of Lynceus seeing into the very deeps of the earth tells us of those eyes in the divine. No weariness overtakes this vision, which yet brings no such satiety as would call for its ending; for there never was a void to be filled so that, with the fulness and the attainment of purpose, the sense of sufficiency be induced: nor is there any such incongruity within the divine that one Being there could be repulsive to another: and of course all There are unchangeable. This absence of satisfaction means only a satisfaction leading to no distaste for that which produces it; to see is to look the more, since for them to continue in the contemplation of an infinite self and of infinite objects is but to acquiesce in the bidding of their nature.

Life, pure, is never a burden; how then could there be weariness There where the living is most noble? That very life is wisdom, not a wisdom built up by reasonings but complete from the beginning, suffering no lack which could set it enquiring, a wisdom primal, unborrowed, not something added to the Being, but its very essence. No wisdom, thus, is greater; this is the authentic knowing, assessor to the divine Intellect as projected into manifestation simultaneously with it; thus, in the symbolic saying, Justice is assessor to Zeus.

[Perfect wisdom] for all the Principles of this order, dwelling There, are as it were visible images protected from themselves, so that all becomes an object of contemplation to contemplators immeasurably blessed. The greatness and power of the wisdom There we may know from this, that it embraces all the real Beings, and has made all, and all follow it, and yet that it is itself those beings, which sprang into being with it, so that all is

one, and the essence There is wisdom. If we have failed to understand, it is that we have thought of knowledge as a mass of theorems and an accumulation of propositions, though that is false even for our sciences of the sense-realm. But in case this should be questioned, we may leave our own sciences for the present, and deal with the knowing in the Supreme at which Plato glances where he speaks of "that knowledge which is not a stranger in something strange to it"- though in what sense, he leaves us to examine and declare, if we boast ourselves worthy of the discussion. This is probably our best starting-point.

5. All that comes to be, work of nature or of craft, some wisdom has made: everywhere a wisdom presides at a making.

No doubt the wisdom of the artist may be the guide of the work; it is sufficient explanation of the wisdom exhibited in the arts; but the artist himself goes back, after all, to that wisdom in Nature which is embodied in himself; and this is not a wisdom built up of theorems but one totality, not a wisdom consisting of manifold detail co-ordinated into a unity but rather a unity working out into detail.

Now, if we could think of this as the primal wisdom, we need look no further, since, at that, we have discovered a principle which is neither a derivative nor a "stranger in something strange to it." But if we are told that, while this Reason-Principle is in Nature, yet Nature itself is its source, we ask how Nature came to possess it; and, if Nature derived it from some other source, we ask what that other source may be; if, on the contrary, the principle is self-sprung, we need look no further: but if we are referred to the Intellectual-Principle we must make clear whether the Intellectual-Principle engendered the wisdom: if we learn that it did, we ask whence: if from itself, then inevitably, it is itself Wisdom.

The true Wisdom, then [found to be identical with the Intellectual-Principle] is Real Being; and Real Being is Wisdom; it is wisdom that gives value to Real Being; and Being is Real in virtue of its origin in wisdom. It follows that all forms of existence not possessing wisdom are, indeed, Beings in right of the wisdom which went to their forming but, as not in themselves possessing it, are not Real Beings.

We cannot therefore think that the divine Beings of that sphere, or the other supremely blessed There, need look to our apparatus of science: all of that realm, all is noble image, such images as we may conceive to lie within the soul of the wise- but There not as inscription but as authentic existence. The ancients had this in mind when they declared the Ideas to be Beings, Essentials.

6. Similarly, as it seems to me, the wise of Egypt- whether in precise knowledge or by a prompting of nature- indicated the truth where, in their effort towards philosophical statement, they left aside the writing-forms that take in the detail of words and sentences- those characters that represent sounds and convey the propositions of reasoning- and drew pictures instead, engraving in the temple- inscriptions a separate image for every separate item: thus they exhibited the mode in which the Supreme goes forth.

For each manifestation of knowledge and wisdom is a distinct image, an object in itself, an immediate unity, not as aggregate of discursive reasoning and detailed willing. Later from this wisdom in unity there appears, in another form of being, an image, already less compact, which announces the original in an outward stage and seeks the causes by which things are such that the wonder rises how a generated world can be so excellent.

For, one who knows must declare his wonder that this Wisdom, while not itself containing the causes by which Being exists and takes such excellence, yet imparts them to the entities produced in Being's realm. This excellence whose necessity is scarcely or not at all manifest to search, exists, if we could but find it out, before all searching and reasoning.

What I say may be considered in one chief thing, and thence applied to all the particular entities:

7. Consider the universe: we are agreed that its existence and its nature come to it from beyond itself; are we, now, to imagine that its maker first thought it out in detail- the earth, and its necessary situation in the middle; water and, again, its position as lying upon the earth; all the other elements and objects up to the sky in due place and order; living beings with their appropriate forms as we know them, their inner organs and their outer limbs- and that having thus appointed every item beforehand, he then set about the execution?

Such designing was not even possible; how could the plan for a universe come to one that had never looked outward? Nor could he work on material gathered from elsewhere as our craftsmen do, using hands and tools; feet and hands are of the later order.

One way, only, remains: all things must exist in something else; of that prior- since there is no obstacle, all being continuous within the realm of reality- there has suddenly appeared a sign, an image, whether given forth directly or through the ministry of soul or of some phase of soul, matters nothing for the moment: thus the entire aggregate of existence springs from the divine world, in greater beauty There because There unmingled but mingled here.

From the beginning to end all is gripped by the Forms of the Intellectual Realm: Matter itself is held by the Ideas of the elements and to these Ideas are added other Ideas and others again, so that it is hard to work down to crude Matter beneath all that sheathing of Idea. Indeed since Matter itself is in its degree, an Idea- the lowest- all this universe is Idea and there is nothing that is not Idea as the archetype was. And all is made silently, since nothing had part in the making but Being and Idea further reason why creation went without toil. The Exemplar was the Idea of an All, and so an All must come into being.

Thus nothing stood in the way of the Idea, and even now it dominates, despite all the clash of things: the creation is not hindered on its way even now; it stands firm in virtue

of being All. To me, moreover, it seems that if we ourselves were archetypes, Ideas, veritable Being, and the Idea with which we construct here were our veritable Essence, then our creative power too would toillessly effect its purpose: as man now stands, he does not produce in his work a true image of himself: become man, he has ceased to be the All: ceasing to be man- we read- "he soars aloft and administers the Kosmos entire"; restored to the All he is maker of the All.

But- to our immediate purpose- it is possible to give a reason why the earth is set in the midst and why it is round and why the ecliptic runs precisely as it does, but, looking to the creating principle, we cannot say that because this was the way therefore things were so planned: we can say only that because the All is what it is, therefore there is a total of good; the causing principle, we might put it, reached the conclusion before all formal reasoning and not from any premises, not by sequence or plan but before either, since all of that order is later, all reason, demonstration, persuasion.

Since there is a Source, all the created must spring from it and in accordance with it; and we are rightly told not to go seeking the causes impelling a Source to produce, especially when this is the perfectly sufficient Source and identical with the Term: a Source which is Source and Term must be the All-Unity, complete in itself.

8. This then is Beauty primally: it is entire and omnipresent as an entirety; and therefore in none of its parts or members lacking in beauty; beautiful thus beyond denial. Certainly it cannot be anything [be, for example, Beauty] without being wholly that thing; it can be nothing which it is to possess partially or in which it utterly fails [and therefore it must entirely be Beauty entire].

If this principle were not beautiful, what other could be? Its prior does not deign to be beautiful; that which is the first to manifest itself- Form and object of vision to the intellect- cannot but be lovely to see. It is to indicate this that Plato, drawing on something well within our observation, represents the Creator as approving the work he has achieved: the intention is to make us feel the lovable beauty of the autotype and of the Divine Idea; for to admire a representation is to admire the original upon which it was made.

It is not surprising if we fail to recognise what is passing within us: lovers, and those in general that admire beauty here, do not stay to reflect that it is to be traced, as of course it must be, to the Beauty There. That the admiration of the Demiurge is to be referred to the Ideal Exemplar is deliberately made evident by the rest of the passage: "He admired; and determined to bring the work into still closer likeness with the Exemplar": he makes us feel the magnificent beauty of the Exemplar by telling us that the Beauty sprung from this world is, itself, a copy from That.

And indeed if the divine did not exist, the transcendently beautiful, in a beauty beyond all thought, what could be lovelier than the things we see? Certainly no reproach can rightly be brought against this world save only that it is not That.

9. Let us, then, make a mental picture of our universe: each member shall remain what

it is, distinctly apart; yet all is to form, as far as possible, a complete unity so that whatever comes into view shall show as if it were the surface of the orb over all, bringing immediately with it the vision, on the one plane, of the sun and of all the stars with earth and sea and all living things as if exhibited upon a transparent globe.

Bring this vision actually before your sight, so that there shall be in your mind the gleaming representation of a sphere, a picture holding sprung, themselves, of that universe and repose or some at rest, some in motion. Keep this sphere before you, and from it imagine another, a sphere stripped of magnitude and of spatial differences; cast out your inborn sense of Matter, taking care not merely to attenuate it: call on God, maker of the sphere whose image you now hold, and pray Him to enter. And may He come bringing His own Universe with all the Gods that dwell in it- He who is the one God and all the gods, where each is all, blending into a unity, distinct in powers but all one god in virtue of that one divine power of many facets.

More truly, this is the one God who is all the gods; for, in the coming to be of all those, this, the one, has suffered no diminishing. He and all have one existence while each again is distinct. It is distinction by state without interval: there is no outward form to set one here and another there and to prevent any from being an entire identity; yet there is no sharing of parts from one to another. Nor is each of those divine wholes a power in fragment, a power totalling to the sum of the measurable segments: the divine is one all-power, reaching out to infinity, powerful to infinity; and so great is God that his very members are infinites. What place can be named to which He does not reach?

Great, too, is this firmament of ours and all the powers constellated within it, but it would be greater still, unspeakably, but that there is inbound in it something of the petty power of body; no doubt the powers of fire and other bodily substances might themselves be thought very great, but in fact, it is through their failure in the true power that we see them burning, destroying, wearing things away, and slaving towards the production of life; they destroy because they are themselves in process of destruction, and they produce because they belong to the realm of the produced.

The power in that other world has merely Being and Beauty of Being. Beauty without Being could not be, nor Being voided of Beauty: abandoned of Beauty, Being loses something of its essence. Being is desirable because it is identical with Beauty; and Beauty is loved because it is Being. How then can we debate which is the cause of the other, where the nature is one? The very figment of Being needs some imposed image of Beauty to make it passable and even to ensure its existence; it exists to the degree in which it has taken some share in the beauty of Idea; and the more deeply it has drawn on this, the less imperfect it is, precisely because the nature which is essentially the beautiful has entered into it the more intimately.

10. This is why Zeus, although the oldest of the gods and their sovereign, advances first [in the Phaidros myth] towards that vision, followed by gods and demigods and such souls as are of strength to see. That Being appears before them from some unseen place and rising loftily over them pours its light upon all things, so that all gleams in its radiance; it upholds some beings, and they see; the lower are dazzled and turn away,

unfit to gaze upon that sun, the trouble falling the more heavily on those most remote.

Of those looking upon that Being and its content, and able to see, all take something but not all the same vision always: intently gazing, one sees the fount and principle of Justice, another is filled with the sight of Moral Wisdom, the original of that quality as found, sometimes at least, among men, copied by them in their degree from the divine virtue which, covering all the expanse, so to speak, of the Intellectual Realm is seen, last attainment of all, by those who have known already many splendid visions.

The gods see, each singly and all as one. So, too, the souls; they see all There in right of being sprung, themselves, of that universe and therefore including all from beginning to end and having their existence There if only by that phase which belongs inherently to the Divine, though often too they are There entire, those of them that have not incurred separation.

This vision Zeus takes, and it is for such of us, also, as share his love and appropriate our part in the Beauty There, the final object of all seeing, the entire beauty upon all things; for all There sheds radiance, and floods those that have found their way thither so that they too become beautiful; thus it will often happen that men climbing heights where the soil has taken a yellow glow will themselves appear so, borrowing colour from the place on which they move. The colour flowering on that other height we speak of is Beauty; or rather all There is light and beauty, through and through, for the beauty is no mere bloom upon the surface.

To those that do not see entire, the immediate impression is alone taken into account; but those drunken with this wine, filled with the nectar, all their soul penetrated by this beauty, cannot remain mere gazers: no longer is there a spectator outside gazing on an outside spectacle; the clear-eyed hold the vision within themselves, though, for the most part, they have no idea that it is within but look towards it as to something beyond them and see it as an object of vision caught by a direction of the will.

All that one sees as a spectacle is still external; one must bring the vision within and see no longer in that mode of separation but as we know ourselves; thus a man filled with a god- possessed by Apollo or by one of the Muses- need no longer look outside for his vision of the divine being; it is but finding the strength to see divinity within.

11. Similarly any one, unable to see himself, but possessed by that God, has but to bring that divine- within before his consciousness and at once he sees an image of himself, himself lifted to a better beauty: now let him ignore that image, lovely though it is, and sink into a perfect self-identity, no such separation remaining; at once he forms a multiple unity with the God silently present; in the degree of his power and will, the two become one; should he turn back to the former duality, still he is pure and remains very near to the God; he has but to look again and the same presence is there.

This conversion brings gain: at the first stage, that of separation, a man is aware of self; but, retreating inwards, he becomes possessor of all; he puts sense away behind him in dread of the separated life and becomes one in the Divine; if he plans to see in

separation, he sets himself outside.

The novice must hold himself constantly under some image of the Divine Being and seek in the light of a clear conception; knowing thus, in a deep conviction, whither he is going- into what a sublimity he penetrates- he must give himself forthwith to the inner and, radiant with the Divine Intellections [with which he is now one], be no longer the seer but, as that place has made him, the seen.

Still, we will be told, one cannot be in beauty and yet fail to see it. The very contrary: to see the divine as something external is to be outside of it; to become it is to be most truly in beauty: since sight deals with the external, there can here be no vision unless in the sense of identification with the object.

And this identification amounts to a self-knowing, a self-consciousness, guarded by the fear of losing the self in the desire of a too wide awareness.

It must be remembered that sensations of the ugly and evil impress us more violently than those of what is agreeable and yet leave less knowledge as the residue of the shock: sickness makes the rougher mark, but health, tranquilly present, explains itself better; it takes the first place, it is the natural thing, it belongs to our being; illness is alien, unnatural and thus makes itself felt by its very incongruity, while the other conditions are native and we take no notice. Such being our nature, we are most completely aware of ourselves when we are most completely identified with the object of our knowledge.

This is why in that other sphere, when we are deepest in that knowledge by intellection, we are aware of none; we are expecting some impression on sense, which has nothing to report since it has seen nothing and never could in that order see anything. The unbelieving element is sense; it is the other, the Intellectual-Principle, that sees; and if this too doubted, it could not even credit its own existence, for it can never stand away and with bodily eyes apprehend itself as a visible object.

12. We have told how this vision is to be procured, whether by the mode of separation or in identity: now, seen in either way, what does it give to report?

The vision has been of God in travail of a beautiful offspring, God engendering a universe within himself in a painless labour and- rejoiced in what he has brought into being, proud of his children- keeping all closely by Him, for pleasure He has in his radiance and in theirs.

Of this offspring- all beautiful, but most beautiful those that have remained within- only one has become manifest without; from him [Zeus, sovereign over the visible universe] the youngest born, we may gather, as from some image, the greatness of the Father and of the Brothers that remain within the Father's house.

Still the manifested God cannot think that he has come forth in vain from the father; for through him another universe has arisen, beautiful as the image of beauty, and it could

not be' lawful that Beauty and Being should fail of a beautiful image.

This second Kosmos at every point copies the archetype: it has life and being in copy, and has beauty as springing from that diviner world. In its character of image it holds, too, that divine perpetuity without which it would only at times be truly representative and sometimes fail like a construction of art; for every image whose existence lies in the nature of things must stand during the entire existence of the archetype.

Hence it is false to put an end to the visible sphere as long as the Intellectual endures, or to found it upon a decision taken by its maker at some given moment.

That teaching shirks the penetration of such a making as is here involved: it fails to see that as long as the Supreme is radiant there can be no failing of its sequel but, that existing, all exists. And- since the necessity of conveying our meaning compels such terms- the Supreme has existed for ever and for ever will exist.

13. The God fettered [as in the Kronos Myth] to an unchanging identity leaves the ordering of this universe to his son (to Zeus), for it could not be in his character to neglect his rule within the divine sphere, and, as though sated with the Authentic-Beauty, seek a lordship too recent and too poor for his might. Ignoring this lower world, Kronos [Intellectual-Principle] claims for his own father [Ouranoo, the Absolute, or One] with all the upward-tending between them: and he counts all that tends to the inferior, beginning from his son [Zeus, the All-Soul], as ranking beneath him. Thus he holds a mid position determined on the one side by the differentiation implied in the severance from the very highest and, on the other, by that which keeps him apart from the link between himself and the lower: he stands between a greater father and an inferior son. But since that father is too lofty to be thought of under the name of Beauty, the second God remains the primally beautiful.

Soul also has beauty, but is less beautiful than Intellect as being its image and therefore, though beautiful in nature, taking increase of beauty by looking to that original. Since then the All-Soul- to use the more familiar term- since Aphrodite herself is so beautiful, what name can we give to that other? If Soul is so lovely in its own right, of what quality must that prior be? And since its being is derived, what must that power be from which the Soul takes the double beauty, the borrowed and the inherent?

We ourselves possess beauty when we are true to our own being; our ugliness is in going over to another order; our self-knowledge, that is to say, is our beauty; in self-ignorance we are ugly.

Thus beauty is of the Divine and comes Thence only.

Do these considerations suffice to a clear understanding of the Intellectual Sphere, or must we make yet another attempt by another road?

NINTH TRACTATE.

THE INTELLECTUAL-PRINCIPLE, THE IDEAS, AND THE AUTHENTIC EXISTENCE.

1. All human beings from birth onward live to the realm of sense more than to the Intellectual.

Forced of necessity to attend first to the material, some of them elect to abide by that order and, their life throughout, make its concerns their first and their last; the sweet and the bitter of sense are their good and evil; they feel they have done all if they live along pursuing the one and barring the doors to the other. And those of them that pretend to reasoning have adopted this as their philosophy; they are like the heavier birds which have incorporated much from the earth and are so weighted down that they cannot fly high for all the wings Nature has given them.

Others do indeed lift themselves a little above the earth; the better in their soul urges them from the pleasant to the nobler, but they are not of power to see the highest and so, in despair of any surer ground, they fall back in virtue's name, upon those actions and options of the lower from which they sought to escape.

But there is a third order- those godlike men who, in their mightier power, in the keenness of their sight, have clear vision of the splendour above and rise to it from among the cloud and fog of earth and hold firmly to that other world, looking beyond all here, delighted in the place of reality, their native land, like a man returning after long wanderings to the pleasant ways of his own country.

2. What is this other place and how it is accessible?

It is to be reached by those who, born with the nature of the lover, are also authentically philosophic by inherent temper; in pain of love towards beauty but not held by material loveliness, taking refuge from that in things whose beauty is of the soul- such things as virtue, knowledge, institutions, law and custom- and thence, rising still a step, reach to the source of this loveliness of the Soul, thence to whatever be above that again, until the uttermost is reached. The First, the Principle whose beauty is self-springing: this attained, there is an end to the pain inassuageable before.

But how is the ascent to be begun? Whence comes the power? In what thought is this love to find its guide?

The guiding thought is this: that the beauty perceived on material things is borrowed.

The pattern giving beauty to the corporeal rests upon it as Idea to its Matter and the substrate may change and from being pleasant become distasteful, a sign, in all reason, that the beauty comes by participation.

Now, what is this that gives grace to the corporeal?

Two causes in their degree; the participation in beauty and the power of Soul, the maker, which has imprinted that form.

We ask then is soul, of itself, a thing of beauty: we find it is not since differences are manifest, one Soul wise and lovely, another foolish and ugly: soul-beauty is constituted by wisdom.

The question thus becomes, "What principle is the giver of wisdom to the soul? and the only answer is "The Intellectual-Principle," the veritably intellectual, wise without intermission and therefore beautiful of itself.

But does even this suffice for our First?

No; we must look still inward beyond the Intellectual, which, from our point of approach, stands before the Supreme Beginning, in whose forecourt, as it were, it announces in its own being the entire content of the Good, that prior of all, locked in unity, of which this is the expression already touched by multiplicity.

3. We will have to examine this Nature, the Intellectual, which our reasoning identifies as the authentically existent and the veritable essential: but first we must take another path and make certain that such a principle does necessarily exist.

Perhaps it is ridiculous to set out enquiring whether an Intellectual-Principle has place in the total of being: but there may be some to hesitate even as to this and certainly there will be the question whether it is as we describe it, whether it is a separate existence, whether it actually is the real beings, whether it is the seat of the Ideas; to this we now address ourselves.

All that we see, and describe as having existence, we know to be compound; hand-wrought or compacted by nature, nothing is simplex. Now the hand-wrought, with its metal or stone or wood, is not realized out of these materials until the appropriate craft has produced statue, house or bed, by imparting the particular idea from its own content. Similarly with natural forms of being; those including several constituents, compound bodies as we call them, may be analysed into the materials and the Idea imposed upon the total; the human being, for example, into soul and body; and the human body into the four elements. Finding everything to be a compound of Matter and shaping principle- since the Matter of the elements is of itself shapeless- you will enquire whence this forming idea comes; and you will ask whether in the soul we recognise a simplex or whether this also has constituents, something representing Matter and something else- the Intellectual-Principle in it- representing Idea, the one corresponding to the shape actually on the statue, the other to the artist giving the shape.

Applying the same method to the total of things, here too we discover the Intellectual-Principle and this we set down as veritably the maker and creator of the All. The underlying has adopted, we see, certain shapes by which it becomes fire, water, air, earth; and these shapes have been imposed upon it by something else. This other is

Soul which, hovering over the Four [the elements], imparts the pattern of the Kosmos, the Ideas for which it has itself received from the Intellectual-Principle as the soul or mind of the craftsman draws upon his craft for the plan of his work.

The Intellectual-Principle is in one phase the Form of the soul, its shape; in another phase it is the giver of the shape- the sculptor, possessing inherently what is given- imparting to soul nearly the authentic reality while what body receives is but image and imitation.

4. But, soul reached, why need we look higher; why not make this The First?

A main reason is that the Intellectual-Principle is at once something other and something more powerful than Soul and that the more powerful is in the nature of things the prior. For it is certainly not true, as people imagine, that the soul, brought to perfection, produces Intellect. How could that potentiality come to actuality unless there be, first, an effective principle to induce the actualization which, left to chance, might never occur?

The Firsts must be supposed to exist in actuality, looking to nothing else, self-complete. Anything incomplete must be sequent upon these, and take its completion from the principles engendering it which, like fathers, labour in the improvement of an offspring born imperfect: the produced is a Matter to the producing principle and is worked over by it into a shapely perfection.

And if, further, soul is passible while something impassible there must be or by the mere passage of time all wears away, here too we are led to something above soul.

Again there must be something prior to Soul because Soul is in the world and there must be something outside a world in which, all being corporeal and material, nothing has enduring reality: failing such a prior, neither man nor the Ideas would be eternal or have true identity.

These and many other considerations establish the necessary existence of an Intellectual-Principle prior to Soul.

5. This Intellectual-Principle, if the term is to convey the truth, must be understood to be not a principle merely potential and not one maturing from unintelligence to intelligence- that would simply send us seeking, once more, a necessary prior- but a principle which is intelligence in actuality and in eternity.

Now a principle whose wisdom is not borrowed must derive from itself any intellection it may make; and anything it may possess within itself it can hold only from itself: it follows that, intellective by its own resource and upon its own content, it is itself the very things on which its intellection acts.

For supposing its essence to be separable from its intellection and the objects of its intellection to be not itself, then its essence would be unintellectual; and it would be

intellectual not actually but potentially. The intellection and its object must then be inseparable- however the habit induced by our conditions may tempt us to distinguish, There too, the thinker from the thought.

What then is its characteristic Act and what the intellection which makes knower and known here identical?

Clearly, as authentic Intellection, it has authentic intellection of the authentically existent, and establishes their existence. Therefore it is the Authentic Beings.

Consider: It must perceive them either somewhere else or within itself as its very self: the somewhere else is impossible- where could that be?- they are therefore itself and the content of itself.

Its objects certainly cannot be the things of sense, as people think; no First could be of the sense-known order; for in things of sense the Idea is but an image of the authentic, and every Idea thus derivative and exiled traces back to that original and is no more than an image of it.

Further, if the Intellectual-Principle is to be the maker of this All, it cannot make by looking outside itself to what does not yet exist. The Authentic Beings must, then, exist before this All, no copies made on a model but themselves archetypes, primals, and the essence of the Intellectual-Principle.

We may be told that Reason-Principles suffice [to the subsistence of the All]: but then these, clearly, must be eternal; and if eternal, if immune, then they must exist in an Intellectual-Principle such as we have indicated, a principle earlier than condition, than nature, than soul, than anything whose existence is potential for contingent].

The Intellectual-Principle, therefore, is itself the authentic existences, not a knower knowing them in some sphere foreign to it. The Authentic Beings, thus, exist neither before nor after it: it is the primal legislator to Being or, rather, is itself the law of Being. Thus it is true that "Intellectual and Being are identical"; in the immaterial the knowledge of the thing is the thing. And this is the meaning of the dictum "I sought myself," namely as one of the Beings: it also bears on reminiscence.

For none of the Beings is outside the Intellectual-Principle or in space; they remain for ever in themselves, accepting no change, no decay, and by that are the authentically existent. Things that arise and fall away draw on real being as something to borrow from; they are not of the real; the true being is that on which they draw.

It is by participation that the sense-known has the being we ascribe to it; the underlying nature has taken its shape from elsewhere; thus bronze and wood are shaped into what we see by means of an image introduced by sculpture or carpentry; the craft permeates the materials while remaining integrally apart from the material and containing in itself the reality of statue or couch. And it is so, of course, with all corporeal things.

This universe, characteristically participant in images, shows how the image differs from the authentic beings: against the variability of the one order, there stands the unchanging quality of the other, self-situate, not needing space because having no magnitude, holding an existent intellective and self-sufficing. The body-kind seeks its endurance in another kind; the Intellectual-Principle, sustaining by its marvellous Being, the things which of themselves must fall, does not itself need to look for a staying ground.

6. We take it, then, that the Intellectual-Principle is the authentic existences and contains them all- not as in a place but as possessing itself and being one thing with this its content. All are one there and yet are distinct: similarly the mind holds many branches and items of knowledge simultaneously, yet none of them merged into any other, each acting its own part at call quite independently, every conception coming out from the inner total and working singly. It is after this way, though in a closer unity, that the Intellectual-Principle is all Being in one total- and yet not in one, since each of these beings is a distinct power which, however, the total Intellectual-Principle includes as the species in a genus, as the parts in a whole. This relation may be illustrated by the powers in seed; all lies undistinguished in the unit, the formative ideas gathered as in one kernel; yet in that unit there is eye-principle, and there is hand-principle, each of which is revealed as a separate power by its distinct material product. Thus each of the powers in the seed is a Reason-Principle one and complete yet including all the parts over which it presides: there will be something bodily, the liquid, for example, carrying mere Matter; but the principle itself is Idea and nothing else, idea identical with the generative idea belonging to the lower soul, image of a higher. This power is sometimes designated as Nature in the seed-life; its origin is in the divine; and, outgoing from its priors as light from fire, it converts and shapes the matter of things, not by push and pull and the lever work of which we hear so much, but by bestowal of the Ideas.

7. Knowledge in the reasoning soul is on the one side concerned with objects of sense, though indeed this can scarcely be called knowledge and is better indicated as opinion or surface-knowing; it is of later origin than the objects since it is a reflection from them: but on the other hand there is the knowledge handling the intellectual objects and this is the authentic knowledge; it enters the reasoning soul from the Intellectual-Principle and has no dealing with anything in sense. Being true knowledge it actually is everything of which it takes cognisance; it carries as its own content the intellectual act and the intellectual object since it carries the Intellectual-Principle which actually is the primals and is always self-present and is in its nature an Act, never by any want forced to seek, never acquiring or traversing the remote- for all such experience belongs to soul- but always self-gathered, the very Being of the collective total, not an extern creating things by the act of knowing them.

Not by its thinking God does God come to be; not by its thinking Movement does Movement arise. Hence it is an error to call the Ideas intellections in the sense that, upon an intellectual act in this Principle, one such Idea or another is made to exist or exists. No: the object of this intellection must exist before the intellective act [must be the very content not the creation of the Intellectual-Principle]. How else could that Principle come to know it: certainly not [as an external] by luck or by haphazard search.

8. If, then, the Intellection is an act upon the inner content [of a perfect unity], that content is at once the Idea [as object: eidos] and the Idea itself [as concept: idea].

What, then, is that content?

An Intellectual-Principle and an Intellective Essence, no concept distinguishable from the Intellectual-Principle, each actually being that Principle. The Intellectual-Principle entire is the total of the Ideas, and each of them is the [entire] Intellectual-Principle in a special form. Thus a science entire is the total of the relevant considerations each of which, again, is a member of the entire science, a member not distinct in space yet having its individual efficacy in a total.

This Intellectual-Principle, therefore, is a unity while by that possession of itself it is, tranquilly, the eternal abundance.

If the Intellectual-Principle were envisaged as preceding Being, it would at once become a principle whose expression, its intellectual Act, achieves and engenders the Beings: but, since we are compelled to think of existence as preceding that which knows it, we can but think that the Beings are the actual content of the knowing principle and that the very act, the intellection, is inherent to the Beings, as fire stands equipped from the beginning with fire-act; in this conception, the Beings contain the Intellectual-Principle as one and the same with themselves, as their own activity. Thus, Being is itself an activity: there is one activity, then, in both or, rather, both are one thing.

Being, therefore, and the Intellectual-Principle are one Nature: the Beings, and the Act of that which is, and the Intellectual-Principle thus constituted, all are one: and the resultant Intellections are the Idea of Being and its shape and its act.

It is our separating habit that sets the one order before the other: for there is a separating intellect, of another order than the true, distinct from the intellect, inseparable and unseparating, which is Being and the universe of things.

9. What, then, is the content- inevitably separated by our minds- of this one Intellectual-Principle? For there is no resource but to represent the items in accessible form just as we study the various articles constituting one science.

This universe is a living thing capable of including every form of life; but its Being and its modes are derived from elsewhere; that source is traced back to the Intellectual-Principle: it follows that the all-embracing archetype is in the Intellectual-Principle, which, therefore, must be an intellectual Kosmos, that indicated by Plato in the phrase "The living existent."

Given the Reason-Principle [the outgoing divine Idea] of a certain living thing and the Matter to harbour this seed-principle, the living thing must come into being: in the same way once there exists- an intellective Nature, all powerful, and with nothing to check it- since nothing intervenes between it and that which is of a nature to receive it- inevitably

the higher imprints form and the lower accepts, it. The recipient holds the Idea in division, here man, there sun, while in the giver all remains in unity.

10. All, then, that is present in the sense realm as Idea comes from the Supreme. But what is not present as Idea, does not. Thus of things conflicting with nature, none is There: the inartistic is not contained in the arts; lameness is not in the seed; for a lame leg is either inborn through some thwarting of the Reason-principle or is a marring of the achieved form by accident. To that Intellectual Kosmos belong qualities, accordant with Nature, and quantities; number and mass; origins and conditions; all actions and experiences not against nature; movement and repose, both the universals and the particulars: but There time is replaced by eternity and space by its intellectual equivalent, mutual inclusiveness.

In that Intellectual Kosmos, where all is one total, every entity that can be singled out is an intellective essence and a participant in life: thus, identity and difference, movement and rest with the object resting or moving, essence and quality, all have essential existence. For every real being must be in actuality not merely in potentiality and therefore the nature of each essence is inherent in it.

This suggests the question whether the Intellectual Kosmos contains the forms only of the things of sense or of other existents as well. But first we will consider how it stands with artistic creations: there is no question of an ideal archetype of evil: the evil of this world is begotten of need, privation, deficiency, and is a condition peculiar to Matter distressed and to what has come into likeness with Matter.

11. Now as to the arts and crafts and their productions:

The imitative arts- painting, sculpture, dancing, pantomimic gesturing- are, largely, earth-based; on an earthly base; they follow models found in sense, since they copy forms and movements and reproduce seen symmetries; they cannot therefore be referred to that higher sphere except indirectly, through the Reason-Principle in humanity.

On the other hand any skill which, beginning with the observation of the symmetry of living things, grows to the symmetry of all life, will be a portion of the Power There which observes and meditates the symmetry reigning among all beings in the Intellectual Kosmos. Thus all music- since its thought is upon melody and rhythm- must be the earthly representation of the music there is in the rhythm of the Ideal Realm.

The crafts, such as building and carpentry which give us Matter in wrought forms, may be said, in that they draw on pattern, to take their principles from that realm and from the thinking There: but in that they bring these down into contact with the sense-order, they are not wholly in the Intellectual: they are founded in man. So agriculture, dealing with material growths: so medicine watching over physical health; so the art which aims at corporeal strength and well-being: power and well-being mean something else There, the fearlessness and self-sufficing quality of all that lives.

Oratory and generalship, administration and sovereignty- under any forms in which their activities are associated with Good and when they look to that- possess something derived thence and building up their knowledge from the knowledge There.

Geometry, the science of the Intellectual entities, holds place There: so, too, philosophy, whose high concern is Being.

For the arts and products of art, these observations may suffice.

12. It should however be added that if the Idea of man exists in the Supreme, there must exist the Idea of reasoning man and of man with his arts and crafts; such arts as are the offspring of intellect Must be There.

It must be observed that the Ideas will be of universals; not of Socrates but of Man: though as to man we may enquire whether the individual may not also have place There. Under the heading of individuality there is to be considered the repetition of the same feature from man to man, the simian type, for example, and the aquiline: the aquiline and the simian must be taken to be differences in the Idea of Man as there are different types of the animal: but Matter also has its effect in bringing about the degree of aquilinity. Similarly with difference of complexion, determined partly by the Reason-Principle, partly by Matter and by diversity of place.

13. It remains to decide whether only what is known in sense exists There or whether, on the contrary, as Absolute-Man differs from individual man, so there is in the Supreme an Absolute-Soul differing from Soul and an Absolute-Intellect differing from Intellectual-Principle.

It must be stated at the outset that we cannot take all that is here to be image of archetype, or Soul to be an image of Absolute-Soul: one soul, doubtless, ranks higher than another, but here too, though perhaps not as identified with this realm, is the Absolute-Soul.

Every soul, authentically a soul, has some form of rightness and moral wisdom; in the souls within ourselves there is true knowing: and these attributes are no images or copies from the Supreme, as in the sense-world, but actually are those very originals in a mode peculiar to this sphere. For those Beings are not set apart in some defined place; wherever there is a soul that has risen from body, there too these are: the world of sense is one- where, the Intellectual Kosmos is everywhere. Whatever the freed soul attains to here, that it is There.

Thus, if by the content of the sense-world we mean simply the visible objects, then the Supreme contains not only what is in the realm of sense but more: if in the content of the kosmos we mean to include Soul and the Soul-things, then all is here that is There.

14. There is, thus, a Nature comprehending in the Intellectual all that exists, and this Principle must be the source of all. But how, seeing that the veritable source must be a unity, simplex utterly?

The mode by which from the unity arises the multiple, how all this universe comes to be, why the Intellectual-Principle is all and whence it springs, these matters demand another approach.

But on the question as to whether the repulsive and the products of putridity have also their Idea- whether there is an Idea of filth and mud- it is to be observed that all that the Intellectual-Principle derived from The First is of the noblest; in those Ideas the base is not included: these repulsive things point not to the Intellectual-Principle but to the Soul which, drawing upon the Intellectual-Principle, takes from Matter certain other things, and among them these.

But all this will be more clearly brought out, when we turn to the problem of the production of multiplicity from unity. Compounds, we shall see- as owing existence to hazard and not to the Intellectual-Principle, having been fused into objects of sense by their own impulse- are not to be included under Ideas.

The products of putrefaction are to be traced to the Soul's inability to bring some other thing to being- something in the order of nature, which, else, it would- but producing where it may. In the matter of the arts and crafts, all that are to be traced to the needs of human nature are laid up in the Absolute Man.

And before the particular Soul there is another Soul, a universal, and, before that, an Absolute-Soul, which is the Life existing in the Intellectual-Principle before Soul came to be and therefore rightly called [as the Life in the Divine] the Absolute-Soul.

- XI. Concerning right and wrong Social Organization.
- XII. The origin of evil things; and that there is no positive evil.
- XIII. How things eternal are said to be made.
- XIV. In what sense, though the Gods never change, they are said to be made angry and appeased.
- XV. Why we give worship to the Gods when they need nothing.

On the Gods and The World by Sallustius, Part I

Translation by Gilbert Murray in Five Stages of Greek Religion

- I. What the disciple should be; and concerning Common Conceptions

Those who wish to hear about the Gods should have been well guided from childhood, and not habituated to foolish beliefs. They should also be in disposition good and sensible, that they may properly attend to the teaching.

They ought also to know the common conceptions. Common conceptions are those to which all men agree as soon as they are asked; for instance, that all god [here and elsewhere, = godhood, divine nature] is good, free from passion, free from change. For whatever suffers change does so for the worse or the better; if for the worse, it is made bad; if for the better, it must have been bad at first.

II. That god is unchanging, unbegotten, eternal, incorporeal, and not in space.

Let the disciple be thus. Let the teachings be of the following sort. The essences of the Gods never came into existence (for that which always is never comes into existence; and that exists for ever which possesses primary force and by nature suffers nothing): neither do they consist of bodies; for even in bodies the powers are incorporeal. Neither are they contained by space; for that is a property of bodies. Neither are they separate from the first cause nor from one another, just as thoughts are not separate from mind nor acts of knowledge from the soul.

III. Concerning myths; that they are divine, and why.

We may well inquire, then, why the ancients forsook these doctrines and made use of myths. There is this first benefit from myths, that we have to search and do not have our minds idle.

That the myths are divine can be seen from those who have used them. Myths have been used by inspired poets, by the best of philosophers, by those who established the mysteries, and by the Gods themselves in oracles. But why the myths are divine it is the duty of philosophy to inquire. Since all existing things rejoice in that which is like them and reject that which is unlike, the stories about the Gods ought to be like the Gods, so that they may both be worthy of the divine essence and make the Gods well disposed to those who speak of them: which could only be done by means of myths.

Now the myths represent the Gods themselves and the goodness of the Gods - subject always to the distinction of the speakable and the unspeakable, the revealed and the unrevealed, that which is clear and that which is hidden: since, just as the Gods have made the goods of sense common to all, but those of intellect only to the wise, so the myths state the existence of Gods to all, but who and what they are only to those who can understand.

They also represent the activities of the Gods. For one may call the world a myth, in which bodies and things are visible, but souls and minds hidden. Besides, to wish to teach the whole truth about the Gods to all produces contempt in the foolish, because they cannot understand, and lack of zeal in the good, whereas to conceal the truth by myths prevents the contempt of the foolish, and compels the good to practice philosophy.

But why have they put in the myths stories of adultery, robbery, father-binding, and all the other absurdity? Is not that perhaps a thing worthy of admiration, done so that by means of the visible absurdity the soul may immediately feel that the words are veils and believe the truth to be a mystery?

IV. That the species of myth are five, with examples of each.

Of myths some are theological, some physical, some psychic, and again some material, and some mixed from these last two. The theological are those myths which use no bodily form but contemplate the very essence of the Gods: e.g., Kronos swallowing his children. Since god is intellectual, and all intellect returns into itself, this myth expresses in allegory the essence of god.

Myths may be regarded physically when they express the activities of the Gods in the world: e.g., people before now have regarded Kronos as time, and calling the divisions of time his sons say that the sons are swallowed by the father.

The psychic way is to regard the activities of the soul itself; the soul's acts of thought, though they pass on to other objects, nevertheless remain inside their begetters.

The material and last is that which the Egyptians have mostly used, owing to their ignorance, believing material objects actually to be Gods, and so calling them: e.g., they call the earth Isis, moisture Osiris, heat Typhon, or again, water Kronos, the fruits of the earth Adonis, and wine Dionysus.

To say that these objects are sacred to the Gods, like various herbs and stones and animals, is possible to sensible men, but to say that they are Gods is the notion of madmen - except, perhaps, in the sense in which both the orb of the sun and the ray which comes from the orb are colloquially called 'the sun'.

The mixed kind of myth may be seen in many instances: for example they say that in a banquet of the Gods Discord threw down a golden apple; the Goddesses contended for it, and were sent by Zeus to Paris to be judged. Paris saw Aphrodite to be beautiful and gave her the apple. Here the banquet signifies the hypercosmic powers of the Gods; that is why they are all together. The golden apple is the world, which being formed out of opposites, is naturally said to be 'thrown by Discord'. The different Gods bestow different gifts upon the world, and are thus said to 'contend for the apple'. And the soul which lives according to sense - for that is what Paris is - not seeing the other powers in the world but only beauty, declares that the apple belongs to Aphrodite.

Theological myths suit philosophers, physical and psychic suit poets, mixed suit religious initiations, since every initiation aims at uniting us with the world and the Gods.

To take another myth, they say that the Mother of the Gods seeing Attis lying by the river Gallus fell in love with him, took him, crowned him with her cap of stars, and thereafter kept him with her. He fell in love with a nymph and left the Mother to live with her. For this the Mother of the Gods made Attis go mad and cut off his genital organs and leave them with the nymph, and then return and dwell with her.

Now the Mother of the Gods is the principle that generates life; that is why she is called Mother. Attis is the creator of all things which are born and die; that is why he is said to have been found by the river Gallus. For Gallus signifies the Galaxy, or Milky Way, the point at which body subject to passion begins. Now as the primary gods make perfect the secondary, the Mother loves Attis and gives him celestial powers. That is what the cap means. Attis loves a nymph: the nymphs preside over generation, since all that is generated is fluid. But since the process of generation must be stopped somewhere, and not allowed to generate something worse than the worst, the creator who makes these things casts away his generative powers into the creation and is joined to the Gods again. Now these things never happened, but always are. And mind sees all things at once, but reason (or speech) expresses some first and others after. Thus, as the myth is in accord with the cosmos, we for that reason keep a festival imitating the cosmos, for how could we attain higher order?

And at first we ourselves, having fallen from heaven and living with the nymph, are in despondency, and abstain from corn and all rich and unclean food, for both are hostile to the soul. Then comes the cutting of the tree and the fast, as though we also were cutting off the further process of generation. After that the feeding on milk, as though we were being born again; after which come rejoicings and garlands and, as it were, a return up to the Gods.

The season of the ritual is evidence to the truth of these explanations. The rites are performed about the Vernal equinox, when the fruits of the earth are ceasing to be produced, and day is becoming longer than night, which applies well to spirits rising higher. (At least, the other equinox is in mythology the time of the rape of Kore, which is the descent of the souls.)

May these explanations of the myths find favour in the eyes of the Gods themselves and the souls of those who wrote the myths.

V. On the First Cause

Next in order comes knowledge of the first cause and the subsequent orders of the Gods, then the nature of the world, the essence of intellect and of soul, then providence, fate, and fortune, then to see virtue and formed from them, and from what possible source evil came into the world.

Each of these subjects needs many long discussions; but there is perhaps no harm in stating them briefly, so that a disciple may not be completely ignorant about them.

It is proper to the first cause to be one - for unity precedes multitude - and to surpass all things in power and goodness. Consequently all things must partake of it. For owing to its power nothing else can hinder it, and owing to its goodness it will not hold itself apart.

If the first cause were soul, all things would possess soul. If it were mind, all things would possess mind. If it were being, all things would partake of being. And seeing this quality in all things, some men have thought that it was being. Now if things simply

were, without being good, this argument would be true, but if things that are are because of their goodness, and partake in the good, the first thing must needs be both beyond-being and good. It is strong evidence of this that noble souls despise being for the sake of the good, when they face death for their country or friends or for the sake of virtue. - After this inexpressible country or friends or for the sake of virtue. - After this inexpressible power come the orders of the Gods.

VI. On Gods Cosmic and Hypercosmic.

Of the Gods some are of the world, cosmic, and some above the world, hypercosmic. By the cosmic I mean those who make the cosmos. Of the hypercosmic Gods some create essence, some mind, and some soul. Thus they have three orders; all of which may be found in treatises on the subject.

Of the cosmic Gods some make the world be, others animate it, others harmonize it, consisting as it does of different elements; the fourth class keep it when harmonized.

These are four actions, each of which has a beginning, middle, and end, consequently there must be twelve Gods governing the world.

Those who make the world are Zeus, Poseidon, and Hephaistos; those who animate it are Demeter, Hera, and Artemis; those who harmonize it are Apollo, Aphrodite, and Hermes; those who watch over it are Hestia, Athena, and Ares.

One can see secret suggestions of this in their images. Apollo tunes a lyre; Athena is armed; Aphrodite is naked (because harmony creates beauty, and beauty in things seen is not covered).

While these twelve in the primary sense possess the world, we should consider that the other Gods are contained in these. Dionysus in Zeus, for instance, Asklepios in Apollo, the Charites in Aphrodite.

We can also discern their various spheres: to Hestia belongs the earth, to Poseidon water, to Hera air, to Hephaistos fire. And the six superior spheres to the Gods to whom they are usually attributed. For Apollo and Artemis are to be taken for the Sun and Moon, the sphere of Kronos should be attributed to Demeter, the ether to Athena, while the heaven is common to all. Thus the orders, powers, and spheres of the twelve Gods have been explained and celebrated in hymns.

VII. On the Nature of the World and its Eternity.

The cosmos itself must of necessity be indestructible and uncreated. Indestructible because, suppose it destroyed: the only possibility is to make one better than this or worse or the same or a chaos. If worse, the power which out of the better makes the worse must be bad. If better, the maker who did not make the better at first must be imperfect in power. If the same, there will be no use in making it; if a chaos... it is impious even to hear such a thing suggested. These reasons would suffice to show that the world is also uncreated: for if not destroyed, neither is it created. Everything that is created is subject to destruction. And further, since the cosmos exists by the goodness

of god, it follows that god must always be good and the world exist. Just as light coexists with the sun and with fire, and shadow coexists with a body.

Of the bodies in the cosmos, some imitate mind and move in orbits; some imitate soul and move in a straight line, fire and air upward, earth and water downward. Of those that move in orbits the fixed sphere goes from the east, the seven [planets] from the west (This is so for various causes, especially lest the creation should be imperfect owing to the rapid circuit of the spheres.)

The movement being different, the nature of the bodies must also be different; hence the celestial body does not burn or freeze what it touches, or do anything else that pertains to the four elements.

And since the Cosmos is a sphere - the zodiac proves that - and in every sphere 'down' means 'toward the center', for the center is furthest distant from every point, and heavy things fall 'down' and fall to the earth.

All these things are made by the Gods, ordered by mind, moved by soul. About the Gods we have spoken already.

VIII. On Mind and Soul, and that the latter is immortal.

There is a certain force, less primary than being but more primary than the soul, which draws its existence from being and completes the soul as the sun completes the eyes. Of souls some are rational and immortal, some irrational and mortal. The former are derived from the first Gods, the latter from the secondary.

First, we must consider what soul is. It is, then, that by which the animate differs from the inanimate. The difference lies in motion, sensation, imagination, intelligence. Soul therefore, when irrational, is the life of sense and imagination; when rational, it is the life which controls sense and imagination and uses reason. The irrational soul depends on the affections of the body; it feels desire and anger irrationally. The rational soul both, with the help of reason, despises the body, and, fighting against the irrational soul, produces either virtue or vice, according as it is victorious or defeated.

It must be immortal, both because it knows the Gods (and nothing mortal knows what is immortal), it looks down upon human affairs as though it stood outside them, and like an unbodied thing, it is affected in the opposite way to the body. For while the body is young and fine, the soul blunders, but as the body grows old it attains its highest power. Again, every good soul uses mind; but no body can produce mind: for how should that which is without mind produce mind? Again, while the soul uses the body as an instrument, it is not in it; just as the engineer is not in his engines (although many engines move without being touched by any one). And if the soul is often made to err by the body, that is not surprising. For the arts cannot perform their work when their instruments are spoilt.

IX. On Providence, Fate, and Fortune.

This is enough to show the Providence of the Gods. For whence comes the ordering of

the world, if there is no ordering power? And whence comes the fact that all things are for a purpose: e.g. irrational soul that there may be sensation, and rational that the earth may be set in order?

But one can deduce the same result from the evidences of providence in nature: e.g., the eyes have been made transparent with a view to seeing; the nostrils are above the mouth to distinguish bad-smelling foods; the front teeth are sharp to cut food, the back teeth broad to grind it. And we find every part of every object arranged on a similar principle. It is impossible that there should be so much providence in the last details, and none in the first principles. Then the arts of prophecy and of healing, which are part of the cosmos, come of the good providence of the Gods.

All this care for the world, we must believe, is taken by the Gods without any act of will or labor. As bodies which possess some power produce their effects by merely existing: e.g. the sun gives light and heat by merely existing; so, and far more so, the providence of the Gods acts without effort to itself and for the good of the objects of its forethought. This solves the problems of the Epicureans, who argue that what is divine neither has trouble itself nor gives trouble to others.

The incorporeal providence of the Gods, both for bodies and for souls, is of this sort; but that which is of bodies and in bodies is different from this, and is called fate, Heimarmene, because the chain of causes (Heirmos) is more visible in the case of bodies; and it is for dealing with this fate that the science of Mathematic [=Astrology] has been discovered.

Therefore, to believe that human things, especially their material constitution, are ordered not only by celestial beings but by the celestial bodies is a reasonable and true belief. Reason shows that health and sickness, good fortune and bad fortune, arise according to our deserts from that source. But to attribute men's acts of injustice and lust to fate, is to make ourselves good and the Gods bad. Unless by chance a man meant by such a statement that in general all things are for the good of the world and for those who are in a natural state, but that bad education or weakness of nature changes the goods of Fate for the worse. Just as it happens that the Sun, which is good for all, may be injurious to persons with ophthalmia or fever. Else why do the Massagetae eat their fathers, the Hebrews practice circumcision, and the Persians preserve rules of rank? Why do astrologers, while calling Saturn and Mars 'malignant' proceed to make them good, attributing to them philosophy and royalty, generalships and treasures? And if they are going to talk of triangles and squares, it is absurd that Gods should change their natures according to their position in space, while human virtue remains the same everywhere. Also the fact that the stars predict high or low rank for the father of the person whose horoscope is taken, teaches that they do not always make things happen but sometimes only indicate things. For how could things which preceded the birth depend upon the birth?

Further, as there is providence and fate concerned with nations and cities, and also concerned with each individual, so there is also fortune, which should next be treated. That power of the Gods which orders for the good things which are not uniform, and

which happen contrary to expectation, is commonly called Fortune, and it is for this reason that the Goddess is especially worshipped in public by cities; for every city consists of elements which are not uniform. Fortune has power beneath the moon, since above the moon no single thing can happen by fortune.

If fortune makes a wicked man prosperous and a good man poor, there is no need to wonder. For the wicked regard wealth as everything, the good as nothing. And the good fortune of the bad cannot take away their badness, while virtue alone will be enough for the good.

X. Concerning Virtue and Vice.

The doctrine of virtue and vice depends on that of the soul. When the irrational soul enters into the body and immediately produces fight and desire, the rational soul, put in authority over all these, makes the soul tripartite, composed of reason, fight, and desire. Virtue in the region of reason is wisdom, in the region of fight is courage, in the region of desire is temperance; the virtue of the whole soul is righteousness. It is for reason to judge what is right, for fight in obedience to reason to despise things that appear terrible, for desire to pursue not the apparently desirable, but, that which is with reason desirable. When these things are so, we have a righteous life; for righteousness in matters of property is but a small part of virtue. And thus we shall find all four virtues in properly trained men, but among the untrained one may be brave and unjust, another temperate and stupid, another prudent and unprincipled. Indeed, these qualities should not be called virtues when they are devoid of reason and imperfect and found in irrational beings. Vice should be regarded as consisting of the opposite elements. In reason it is folly, in fight, cowardice, in desire, intemperance, in the whole soul, unrighteousness.

The virtues are produced by the right social organization and by good rearing and education, the vices by the opposite.

XI. Concerning right and wrong Social Organization.

Constitutions also depend on the tripartite nature of the soul. The rulers are analogous to reason, the soldiers to fight, the common folk to desires.

Where all things are done according to reason and the best man in the nation rules, it is a kingdom; where more than one rule according to reason and fight, it is an aristocracy; where the government is according to desire and offices depend on money, that constitution is called a timocracy. The contraries are: to kingdom, tyranny, for kingdom does all things with the guidance of reason and tyranny nothing; to aristocracy, oligarchy, when not the best people but a few of the worst are rulers; to timocracy, democracy, when not the rich but the common folk possess the whole power.

XII. The origin of evil things; and that there is no positive evil.

The Gods being good and making all things, how do evils exist in the world? Or perhaps it is better first to state the fact that, the Gods being good and making all things, there is no positive evil, it only comes by absence of good; just as darkness itself does not exist, but only comes about by absence of light.

If evil exists it must exist either in Gods or minds or souls or bodies. It does not exist in any God, for all god is good. If anyone speaks of a 'bad mind' he means a mind without mind. If of a bad soul, he will make the soul inferior to body, for no body in itself is evil. If he says that evil is made up of soul and body together, it is absurd that separately they should not be evil, but joined should create evil.

Suppose it is said that there are evil spirits: - if they have their power from the Gods, they cannot be evil; if from elsewhere, the Gods do not make all things. If they do not make all things, then either they wish to or cannot, or they can and do not wish; neither of which is consistent with the idea of god. We may see, therefore, from these arguments, that there is no positive evil in the world.

It is in the activities of men that the evils appear, and that not of all men nor always. And as to these, if men sinned for the sake of evil, nature itself would be evil. But if the adulterer thinks his adultery bad but his pleasure good, and the murderer thinks the murder bad but the money he gets by it good, and the man who does evil to an enemy thinks that to do evil is bad but to punish his enemy good, and if the soul commits all its sins in that way, then the evils are done for the sake of goodness. (In the same way, because in a given place light does not exist, there comes darkness, which has no positive existence.) The soul sins therefore because, while aiming at good, it makes mistakes about the good, because it is not primary essence. And we see many things done by the Gods to prevent it from making mistakes and to heal it when it has made them. Arts and sciences, curses and prayers, sacrifices and initiations, laws and constitutions, judgments and punishments, all came into existence for the sake of preventing souls from sinning; and when they are gone forth from the body, Gods and spirits of purification cleanse them of their sins.

XIII. How things eternal are said to be made.

Concerning the Gods and the world and human things this account will suffice for those who are not able to go through the whole course of philosophy but yet have not souls beyond help.

It remains to explain how these objects were never made and are never separated one from another, since we ourselves have said above that the secondary substances were 'made' by the first.

Everything made is made either by art or by a physical process or according to some power. Now in art or nature the maker must needs be prior to the made: but the maker, according to power, constitutes the made absolutely together with itself, since its power is inseparable from it; as the sun makes light, fire makes heat, snow makes cold.

Now if the Gods make the world by art, they do not make it be, they make it be such as it is. For all art makes the form of the object. What therefore makes it to be?

If by a physical process, how in that case can the maker help giving part of himself to the made? As the Gods are incorporeal, the world ought to be incorporeal too. If it were

argued that the Gods were bodies, then where would the power of incorporeal things come from? And if we were to admit it, it would follow that when the world decays, its maker must be decaying too, if he is a maker by physical process.

If the Gods make the world neither by art nor by physical process, it only remains that they make it by power. Everything so made subsists together with that which possesses the power. Neither can things so made be destroyed, except the power of the maker be taken away: so that those who believe in the destruction of the world, either deny the existence of the Gods, or, while admitting it, deny God's power.

Therefore he who makes all things by his own power makes all things subsist together with himself. And since his power is the greatest power he must needs be the maker not only of men and animals, but of Gods, men, and spirits. And the further removed the first God is from our nature, the more powers there must be between us and him. For all things that are very far apart have many intermediate points between them.

XIV. In what sense, though the Gods never change, they are said to be made angry and appeased.

If any one thinks the doctrine of the unchangeableness of the Gods is reasonable and true, and then wonders how it is that they rejoice in the good and reject the bad, are angry with sinners and become propitious when appeased, the answer is as follows: god does not rejoice - for that which rejoices also grieves; nor is he angered - for to be angered is a passion; nor is he appeased by gifts - if he were, he would be conquered by pleasure.

It is impious to suppose that the divine is affected for good or ill by human things. The Gods are always good and always do good and never harm, being always in the same state and like themselves. The truth simply is that, when we are good, we are joined to the Gods by our likeness to live according to virtue we cling to the Gods, and when we become evil we make the Gods our enemies - not because they are angered against us, but because our sins prevent the light of the Gods from shining upon us, and put us in communion with spirits of punishment. And if by prayers and sacrifices we find forgiveness of sins, we do not appease or change the Gods, but by what we do and by our turning toward the divine we heal our own badness and so enjoy again the goodness of the Gods. To say that god turns away from the evil is like saying that the sun hides himself from the blind.

XV. Why we give worship to the Gods when they need nothing.

This solves the question about sacrifices and other rites performed to the Gods. The divine itself is without needs, and the worship is paid for our own benefit. The providence of the Gods reaches everywhere and needs only some congruity for its reception. All congruity comes about by representation and likeness; for which reason the temples are made in representation of heaven, the altar of earth, the images of life (that is why they are made like living things), the prayers of the element of thought, the mystic letters of the unspeakable celestial forces, the herbs and stones of matter, and the sacrificial animals of the irrational life in us.

From all these things the Gods gain nothing; what gain could there be to God? It is we who gain some communion with them.

The Theogony of Hesiod

The Theogony of Hesiod

Hugh G. Evelyn-White, tr. (1914)

(Il. 1-25) From the Heliconian Muses let us begin to sing, who hold the great and holy mount of Helicon, and dance on soft feet about the deep-blue spring and the altar of the almighty son of Cronos, and, when they have washed their tender bodies in Permessus or in the Horse's Spring or Olmeius, make their fair, lovely dances upon highest Helicon and move with vigorous feet. Thence they arise and go abroad by night, veiled in thick mist, and utter their song with lovely voice, praising Zeus the aegis-holder and queenly Hera of Argos who walks on golden sandals and the daughter of Zeus the aegis-holder bright-eyed Athene, and Phoebus Apollo, and Artemis who delights in arrows, and Poseidon the earth-holder who shakes the earth, and reverend Themis and quick-glancing (1) Aphrodite, and Hebe with the crown of gold, and fair Dione, Leto, Iapetus, and Cronos the crafty counsellor, Eos and great Helios and bright Selene, Earth too, and great Oceanus, and dark Night, and the holy race of all the other deathless ones that are for ever. And one day they taught Hesiod glorious song while he was shepherding his lambs under holy Helicon, and this word first the goddesses said to me—the Muses of Olympus, daughters of Zeus who holds the aegis:

(Il. 26-28) 'Shepherds of the wilderness, wretched things of shame, mere bellies, we know how to speak many false things as though they were true; but we know, when we will, to utter true things.'

(Il. 29-35) So said the ready-voiced daughters of great Zeus, and they plucked and gave me a rod, a shoot of sturdy laurel, a marvellous thing, and breathed into me a divine voice to celebrate things that shall be and things there were aforetime; and they bade me sing of the race of the blessed gods that are eternally, but ever to sing of themselves both first and last. But why all this about oak or stone? (2)

(Il. 36-52) Come thou, let us begin with the Muses who gladden the great spirit of their father Zeus in Olympus with their songs, telling of things that are and that shall be and that were aforetime with consenting voice. Unwearying flows the sweet sound from their lips, and the house of their father Zeus the loud-thunderer is glad at the lily-like voice of the goddesses as it spread abroad, and the peaks of snowy Olympus resound, and the homes of the immortals. And they uttering their immortal voice, celebrate in song first of all the reverend race of the gods from the beginning, those whom Earth and wide Heaven begot, and the gods sprung of these, givers of good things. Then, next, the goddesses sing of Zeus, the father of gods and men, as they begin and end their strain, how much he is the most excellent among the gods and supreme in power. And again, they chant the race of men and strong giants, and gladden the heart of Zeus within Olympus, – the Olympian Muses, daughters of Zeus the aegis-holder.

(Il. 53-74) Them in Pieria did Mnemosyne (Memory), who reigns over the hills of Eleuther, bear of union with the father, the son of Cronos, a forgetting of ills and a rest from sorrow. For nine nights did wise Zeus lie with her, entering her holy bed remote from the immortals. And when a year was passed and the seasons came round as the months waned, and many days were accomplished, she bare nine daughters, all of one mind, whose hearts are set upon song and their spirit free from care, a little way from the topmost peak of snowy Olympus. There are their bright dancing-places and beautiful homes, and beside them the Graces and Himerus (Desire) live in delight. And they, uttering through their lips a lovely voice, sing the laws of all and the goodly ways of the immortals, uttering their lovely voice. Then went they to Olympus, delighting in their sweet voice, with heavenly song, and the dark earth resounded about them as they chanted, and a lovely sound rose up beneath their feet as they went to their father. And he was reigning in heaven, himself holding the lightning and glowing thunderbolt, when he had overcome by might his father Cronos; and he distributed fairly to the immortals their portions and declared their privileges.

(Il. 75-103) These things, then, the Muses sang who dwell on Olympus, nine daughters begotten by great Zeus, Cleio and Euterpe, Thaleia, Melpomene and Terpsichore, and Erato and Polyhymnia and Urania and Calliope (3), who is the chiefest of them all, for she attends on worshipful princes: whomsoever of heaven-nourished princes the daughters of great Zeus honour, and behold him at his birth, they pour sweet dew upon his tongue, and from his lips flow gracious words. All the people look towards him while he settles causes with true judgements: and he, speaking surely, would soon make wise end even of a great quarrel; for therefore are there princes wise in heart, because when

the people are being misguided in their assembly, they set right the matter again with ease, persuading them with gentle words. And when he passes through a gathering, they greet him as a god with gentle reverence, and he is conspicuous amongst the assembled: such is the holy gift of the Muses to men. For it is through the Muses and far-shooting Apollo that there are singers and harpers upon the earth; but princes are of Zeus, and happy is he whom the Muses love: sweet flows speech from his mouth. For though a man have sorrow and grief in his newly-troubled soul and live in dread because his heart is distressed, yet, when a singer, the servant of the Muses, chants the glorious deeds of men of old and the blessed gods who inhabit Olympus, at once he forgets his heaviness and remembers not his sorrows at all; but the gifts of the goddesses soon turn him away from these.

(Il. 104-115) Hail, children of Zeus! Grant lovely song and celebrate the holy race of the deathless gods who are for ever, those that were born of Earth and starry Heaven and gloomy Night and them that briny Sea did rear. Tell how at the first gods and earth came to be, and rivers, and the boundless sea with its raging swell, and the gleaming stars, and the wide heaven above, and the gods who were born of them, givers of good things, and how they divided their wealth, and how they shared their honours amongst them, and also how at the first they took many-folded Olympus. These things declare to me from the beginning, ye Muses who dwell in the house of Olympus, and tell me which of them first came to be.

(Il. 116-138) Verily at the first Chaos came to be, but next wide-bosomed Earth, the ever-sure foundations of all (4) the deathless ones who hold the peaks of snowy Olympus, and dim Tartarus in the depth of the wide-pathed Earth, and Eros (Love), fairest among the deathless gods, who unnerves the limbs and overcomes the mind and wise counsels of all gods and all men within them. From Chaos came forth Erebus and black Night; but of Night were born Aether (5) and Day, whom she conceived and bare from union in love with Erebus. And Earth first bare starry Heaven, equal to herself, to cover her on every side, and to be an ever-sure abiding-place for the blessed gods. And she brought forth long Hills, graceful haunts of the goddess-Nymphs who dwell amongst the glens of the hills. She bare also the fruitless deep with his raging swell, Pontus, without sweet union of love. But afterwards she lay with Heaven and bare deep-swirling Oceanus, Coeus and Crius and Hyperion and Iapetus, Theia and Rhea, Themis and Mnemosyne and gold-crowned Phoebe and lovely Tethys. After them was born Cronos the wily, youngest and most terrible of her children, and he hated his lusty sire.

(Il. 139-146) And again, she bare the Cyclopes, overbearing in spirit, Brontes, and Steropes and stubborn-hearted Arges (6), who gave Zeus the thunder and made the thunderbolt: in all else they were like the gods, but one eye only was set in the midst of their fore-heads. And they were surnamed Cyclopes (Orb-eyed) because one orb-ed eye was set in their foreheads. Strength and might and craft were in their works.

(Il. 147-163) And again, three other sons were born of Earth and Heaven, great and doughty beyond telling, Cottus and Briareos and Gyes, presumptuous children. From their shoulders sprang an hundred arms, not to be approached, and each had fifty heads upon his shoulders on their strong limbs, and irresistible was the stubborn

strength that was in their great forms. For of all the children that were born of Earth and Heaven, these were the most terrible, and they were hated by their own father from the first.

And he used to hide them all away in a secret place of Earth so soon as each was born, and would not suffer them to come up into the light: and Heaven rejoiced in his evil doing. But vast Earth groaned within, being straitened, and she made the element of grey flint and shaped a great sickle, and told her plan to her dear sons. And she spoke, cheering them, while she was vexed in her dear heart:

(Il. 164-166) 'My children, gotten of a sinful father, if you will obey me, we should punish the vile outrage of your father; for he first thought of doing shameful things.'

(Il. 167-169) So she said; but fear seized them all, and none of them uttered a word. But great Cronos the wily took courage and answered his dear mother:

(Il. 170-172) 'Mother, I will undertake to do this deed, for I reverence not our father of evil name, for he first thought of doing shameful things.'

(Il. 173-175) So he said: and vast Earth rejoiced greatly in spirit, and set and hid him in an ambush, and put in his hands a jagged sickle, and revealed to him the whole plot.

(Il. 176-206) And Heaven came, bringing on night and longing for love, and he lay about Earth spreading himself full upon her (7).

Then the son from his ambush stretched forth his left hand and in his right took the great long sickle with jagged teeth, and swiftly lopped off his own father's members and cast them away to fall behind him. And not vainly did they fall from his hand; for all the bloody drops that gushed forth Earth received, and as the seasons moved round she bare the strong Erinyes and the great Giants with gleaming armour, holding long spears in their hands and the Nymphs whom they call Meliae (8) all over the boundless earth. And so soon as he had cut off the members with flint and cast them from the land into the surging sea, they were swept away over the main a long time: and a white foam spread around them from the immortal flesh, and in it there grew a maiden. First she drew near holy Cythera, and from there, afterwards, she came to sea-girt Cyprus, and came forth an awful and lovely goddess, and grass grew up about her beneath her shapely feet. Her gods and men call Aphrodite, and the foam-born goddess and rich-crowned Cytherea, because she grew amid the foam, and Cytherea because she reached Cythera, and Cyprogenes because she was born in billowy Cyprus, and Philommedes (9) because sprang from the members. And with her went Eros, and comely Desire followed her at her birth at the first and as she went into the assembly of the gods. This honour she has from the beginning, and this is the portion allotted to her amongst men and undying gods,—the whisperings of maidens and smiles and deceits with sweet delight and love and graciousness.

(Il. 207-210) But these sons whom he begot himself great Heaven used to call Titans (Strainers) in reproach, for he said that they strained and did presumptuously a fearful

deed, and that vengeance for it would come afterwards.

(Il. 211-225) And Night bare hateful Doom and black Fate and Death, and she bare Sleep and the tribe of Dreams. And again the goddess murky Night, though she lay with none, bare Blame and painful Woe, and the Hesperides who guard the rich, golden apples and the trees bearing fruit beyond glorious Ocean. Also she bare the Destinies and ruthless avenging Fates, Clotho and Lachesis and Atropos (10), who give men at their birth both evil and good to have, and they pursue the transgressions of men and of gods: and these goddesses never cease from their dread anger until they punish the sinner with a sore penalty. Also deadly Night bare Nemesis (Indignation) to afflict mortal men, and after her, Deceit and Friendship and hateful Age and hard-hearted Strife.

(Il. 226-232) But abhorred Strife bare painful Toil and Forgetfulness and Famine and tearful Sorrows, Fightings also, Battles, Murders, Manslaughters, Quarrels, Lying Words, Disputes, Lawlessness and Ruin, all of one nature, and Oath who most troubles men upon earth when anyone wilfully swears a false oath.

(Il. 233-239) And Sea begat Nereus, the eldest of his children, who is true and lies not: and men call him the Old Man because he is trusty and gentle and does not forget the laws of righteousness, but thinks just and kindly thoughts. And yet again he got great Thaumas and proud Phoreys, being mated with Earth, and fair-cheeked Ceto and Eurybia who has a heart of flint within her.

(Il. 240-264) And of Nereus and rich-haired Doris, daughter of Ocean the perfect river, were born children (11), passing lovely amongst goddesses, Ploto, Eucrante, Sao, and Amphitrite, and Eudora, and Thetis, Galene and Glauce, Cymothoe, Speo, Thoe and lovely Halie, and Pasithea, and Erato, and rosy-armed Eunice, and gracious Melite, and Eulimene, and Agaue, Doto, Proto, Pherusa, and Dynamene, and Nisaea, and Actaea, and Protomedea, Doris, Panopea, and comely Galatea, and lovely Hippothoe, and rosy-armed Hipponoe, and Cymodoce who with Cymatolege (12) and Amphitrite easily calms the waves upon the misty sea and the blasts of raging winds, and Cymo, and Eione, and rich-crowned Alimede, and Glauconome, fond of laughter, and Pontoporea, Leagore, Euagore, and Laomedea, and Polynoe, and Autonoe, and Lysianassa, and Euarne, lovely of shape and without blemish of form, and Psamathe of charming figure and divine Menippe, Neso, Eupompe, Themisto, Pronoe, and Nemertes (13) who has the nature of her deathless father. These fifty daughters sprang from blameless Nereus, skilled in excellent crafts.

(Il. 265-269) And Thaumas wedded Electra the daughter of deep-flowing Ocean, and she bare him swift Iris and the long-haired Harpies, Aello (Storm-swift) and Ocypetes (Swift-flier) who on their swift wings keep pace with the blasts of the winds and the birds; for quick as time they dart along.

(Il. 270-294) And again, Ceto bare to Phoreys the fair-cheeked Graiae, sisters grey from their birth: and both deathless gods and men who walk on earth call them Graiae, Pemphredo well-clad, and saffron-robed Enyo, and the Gorgons who dwell beyond glorious Ocean in the frontier land towards Night where are the clear-voiced

Hesperides, Sthenno, and Euryale, and Medusa who suffered a woeful fate: she was mortal, but the two were undying and grew not old. With her lay the Dark-haired One (14) in a soft meadow amid spring flowers. And when Perseus cut off her head, there sprang forth great Chrysaor and the horse Pegasus who is so called because he was born near the springs (pegae) of Ocean; and that other, because he held a golden blade (aor) in his hands. Now Pegasus flew away and left the earth, the mother of flocks, and came to the deathless gods: and he dwells in the house of Zeus and brings to wise Zeus the thunder and lightning. But Chrysaor was joined in love to Callirrhoe, the daughter of glorious Ocean, and begot three-headed Geryones. Him mighty Heracles slew in sea-girt Erythea by his shambling oxen on that day when he drove the wide-browed oxen to holy Tiryns, and had crossed the ford of Ocean and killed Orthus and Eurytion the herdsman in the dim stead out beyond glorious Ocean.

(Il. 295-305) And in a hollow cave she bare another monster, irresistible, in no wise like either to mortal men or to the undying gods, even the goddess fierce Echidna who is half a nymph with glancing eyes and fair cheeks, and half again a huge snake, great and awful, with speckled skin, eating raw flesh beneath the secret parts of the holy earth. And there she has a cave deep down under a hollow rock far from the deathless gods and mortal men. There, then, did the gods appoint her a glorious house to dwell in: and she keeps guard in Arima beneath the earth, grim Echidna, a nymph who dies not nor grows old all her days.

(Il. 306-332) Men say that Typhaon the terrible, outrageous and lawless, was joined in love to her, the maid with glancing eyes. So she conceived and brought forth fierce offspring; first she bare Orthus the hound of Geryones, and then again she bare a second, a monster not to be overcome and that may not be described, Cerberus who eats raw flesh, the brazen-voiced hound of Hades, fifty-headed, relentless and strong. And again she bore a third, the evil-minded Hydra of Lerna, whom the goddess, white-armed Hera nourished, being angry beyond measure with the mighty Heracles. And her Heracles, the son of Zeus, of the house of Amphitryon, together with warlike Iolaus, destroyed with the un pitying sword through the plans of Athene the spoil-driver. She was the mother of Chimaera who breathed raging fire, a creature fearful, great, swift-footed and strong, who had three heads, one of a grim-eyed lion; in her hinderpart, a dragon; and in her middle, a goat, breathing forth a fearful blast of blazing fire. Her did Pegasus and noble Bellerophon slay; but Echidna was subject in love to Orthus and brought forth the deadly Sphinx which destroyed the Cadmeans, and the Nemean lion, which Hera, the good wife of Zeus, brought up and made to haunt the hills of Nemea, a plague to men. There he preyed upon the tribes of her own people and had power over Tretus of Nemea and Apesas: yet the strength of stout Heracles overcame him.

(Il. 333-336) And Ceto was joined in love to Phorcys and bare her youngest, the awful snake who guards the apples all of gold in the secret places of the dark earth at its great bounds. This is the offspring of Ceto and Phoreys.

(Il. 334-345) And Tethys bare to Ocean eddying rivers, Nilus, and Alpheus, and deep-swirling Eridanus, Strymon, and Meander, and the fair stream of Ister, and Phasis, and Rhesus, and the silver eddies of Achelous, Nessus, and Rhodius, Haliacmon, and

Heptaporus, Granicus, and Aesepus, and holy Simois, and Peneus, and Hermus, and Caicus fair stream, and great Sangarius, Ladon, Parthenius, Euenus, Ardescus, and divine Scamander.

(Il. 346-370) Also she brought forth a holy company of daughters (15) who with the lord Apollo and the Rivers have youths in their keeping—to this charge Zeus appointed them—Peitho, and Admete, and Ianthe, and Electra, and Doris, and Prymno, and Urania divine in form, Hippo, Clymene, Rhodea, and Callirrhoe, Zeuxo and Clytie, and Idyia, and Pasithoe, Plexaura, and Galaxaura, and lovely Dione, Melobosis and Thoe and handsome Polydora, Cerceis lovely of form, and soft eyed Pluto, Perseis, Ianeira, Acaste, Xanthe, Petraea the fair, Menestho, and Europa, Metis, and Eurynome, and Telesto saffron-clad, Chryseis and Asia and charming Calypso, Eudora, and Tyche, Amphirho, and Ocyrrhoe, and Styx who is the chiefest of them all. These are the eldest daughters that sprang from Ocean and Tethys; but there are many besides. For there are three thousand neat-ankled daughters of Ocean who are dispersed far and wide, and in every place alike serve the earth and the deep waters, children who are glorious among goddesses. And as many other rivers are there, babbling as they flow, sons of Ocean, whom queenly Tethys bare, but their names it is hard for a mortal man to tell, but people know those by which they severally dwell.

(Il. 371-374) And Theia was subject in love to Hyperion and bare great Helios (Sun) and clear Selene (Moon) and Eos (Dawn) who shines upon all that are on earth and upon the deathless Gods who live in the wide heaven.

(Il. 375-377) And Eurybia, bright goddess, was joined in love to Crius and bare great Astraeus, and Pallas, and Perses who also was eminent among all men in wisdom.

(Il. 378-382) And Eos bare to Astraeus the strong-hearted winds, brightening Zephyrus, and Boreas, headlong in his course, and Notus,—a goddess mating in love with a god. And after these Erigenia (16) bare the star Eosphorus (Dawn-bringer), and the gleaming stars with which heaven is crowned.

(Il. 383-403) And Styx the daughter of Ocean was joined to Pallas and bare Zelus (Emulation) and trim-ankled Nike (Victory) in the house. Also she brought forth Cratos (Strength) and Bia (Force), wonderful children. These have no house apart from Zeus, nor any dwelling nor path except that wherein God leads them, but they dwell always with Zeus the loud-thunderer. For so did Styx the deathless daughter of Ocean plan on that day when the Olympian Lightener called all the deathless gods to great Olympus, and said that whosoever of the gods would fight with him against the Titans, he would not cast him out from his rights, but each should have the office which he had before amongst the deathless gods. And he declared that he who was without office and rights as is just. So deathless Styx came first to Olympus with her children through the wit of her dear father. And Zeus honoured her, and gave her very great gifts, for her he appointed to be the great oath of the gods, and her children to live with him always. And as he promised, so he performed fully unto them all.

But he himself mightily reigns and rules.

(Il. 404-452) Again, Phoebe came to the desired embrace of Coeus.

Then the goddess through the love of the god conceived and brought forth dark-gowned Leto, always mild, kind to men and to the deathless gods, mild from the beginning, gentlest in all Olympus. Also she bare Asteria of happy name, whom Perses once led to his great house to be called his dear wife. And she conceived and bare Hecate whom Zeus the son of Cronos honoured above all. He gave her splendid gifts, to have a share of the earth and the unfruitful sea. She received honour also in starry heaven, and is honoured exceedingly by the deathless gods. For to this day, whenever any one of men on earth offers rich sacrifices and prays for favour according to custom, he calls upon Hecate. Great honour comes full easily to him whose prayers the goddess receives favourably, and she bestows wealth upon him; for the power surely is with her. For as many as were born of Earth and Ocean amongst all these she has her due portion. The son of Cronos did her no wrong nor took anything away of all that was her portion among the former Titan gods: but she holds, as the division was at the first from the beginning, privilege both in earth, and in heaven, and in sea. Also, because she is an only child, the goddess receives not less honour, but much more still, for Zeus honours her. Whom she will she greatly aids and advances: she sits by worshipful kings in judgement, and in the assembly whom she will is distinguished among the people. And when men arm themselves for the battle that destroys men, then the goddess is at hand to give victory and grant glory readily to whom she will. Good is she also when men contend at the games, for there too the goddess is with them and profits them: and he who by might and strength gets the victory wins the rich prize easily with joy, and brings glory to his parents. And she is good to stand by horsemen, whom she will: and to those whose business is in the grey discomfortable sea, and who pray to Hecate and the loud-crashing Earth-Shaker, easily the glorious goddess gives great catch, and easily she takes it away as soon as seen, if so she will. She is good in the byre with Hermes to increase the stock. The droves of kine and wide herds of goats and flocks of fleecy sheep, if she will, she increases from a few, or makes many to be less. So, then, albeit her mother's only child (17), she is honoured amongst all the deathless gods. And the son of Cronos made her a nurse of the young who after that day saw with their eyes the light of all-seeing Dawn. So from the beginning she is a nurse of the young, and these are her honours.

(Il. 453-491) But Rhea was subject in love to Cronos and bare splendid children, Hestia (18), Demeter, and gold-shod Hera and strong Hades, pitiless in heart, who dwells under the earth, and the loud-crashing Earth-Shaker, and wise Zeus, father of gods and men, by whose thunder the wide earth is shaken. These great Cronos swallowed as each came forth from the womb to his mother's knees with this intent, that no other of the proud sons of Heaven should hold the kingly office amongst the deathless gods. For he learned from Earth and starry Heaven that he was destined to be overcome by his own son, strong though he was, through the contriving of great Zeus (19). Therefore he kept no blind outlook, but watched and swallowed down his children: and unceasing grief seized Rhea. But when she was about to bear Zeus, the father of gods and men, then she besought her own dear parents, Earth and starry Heaven, to devise some plan with her that the birth of her dear child might be concealed, and that retribution might

overtake great, crafty Cronos for his own father and also for the children whom he had swallowed down. And they readily heard and obeyed their dear daughter, and told her all that was destined to happen touching Cronos the king and his stout-hearted son. So they sent her to Lyctus, to the rich land of Crete, when she was ready to bear great Zeus, the youngest of her children. Him did vast Earth receive from Rhea in wide Crete to nourish and to bring up. Thither came Earth carrying him swiftly through the black night to Lyctus first, and took him in her arms and hid him in a remote cave beneath the secret places of the holy earth on thick-wooded Mount Aegeum; but to the mightily ruling son of Heaven, the earlier king of the gods, she gave a great stone wrapped in swaddling clothes. Then he took it in his hands and thrust it down into his belly: wretch! he knew not in his heart that in place of the stone his son was left behind, unconquered and untroubled, and that he was soon to overcome him by force and might and drive him from his honours, himself to reign over the deathless gods.

(Il. 492-506) After that, the strength and glorious limbs of the prince increased quickly, and as the years rolled on, great Cronos the wily was beguiled by the deep suggestions of Earth, and brought up again his offspring, vanquished by the arts and might of his own son, and he vomited up first the stone which he had swallowed last. And Zeus set it fast in the wide-pathed earth at goodly Pytho under the glens of Parnassus, to be a sign thenceforth and a marvel to mortal men (20). And he set free from their deadly bonds the brothers of his father, sons of Heaven whom his father in his foolishness had bound. And they remembered to be grateful to him for his kindness, and gave him thunder and the glowing thunderbolt and lightening: for before that, huge Earth had hidden these. In them he trusts and rules over mortals and immortals.

(Il. 507-543) Now Iapetus took to wife the neat-ankled mad Clymene, daughter of Ocean, and went up with her into one bed. And she bare him a stout-hearted son, Atlas: also she bare very glorious Menoetius and clever Prometheus, full of various wiles, and scatter-brained Epimetheus who from the first was a mischief to men who eat bread; for it was he who first took of Zeus the woman, the maiden whom he had formed. But Menoetius was outrageous, and far-seeing Zeus struck him with a lurid thunderbolt and sent him down to Erebus because of his mad presumption and exceeding pride. And Atlas through hard constraint upholds the wide heaven with unwearying head and arms, standing at the borders of the earth before the clear-voiced Hesperides; for this lot wise Zeus assigned to him. And ready-witted Prometheus he bound with inextricable bonds, cruel chains, and drove a shaft through his middle, and set on him a long-winged eagle, which used to eat his immortal liver; but by night the liver grew as much again every way as the long-winged bird devoured in the whole day. That bird Heracles, the valiant son of shapely-ankled Alcmena, slew; and delivered the son of Iapetus from the cruel plague, and released him from his affliction— not without the will of Olympian Zeus who reigns on high, that the glory of Heracles the Theban-born might be yet greater than it was before over the plenteous earth. This, then, he regarded, and honoured his famous son; though he was angry, he ceased from the wrath which he had before because Prometheus matched himself in wit with the almighty son of Cronos. For when the gods and mortal men had a dispute at Mecone, even then Prometheus was forward to cut up a great ox and set portions before them, trying to befool the mind of Zeus. Before the rest he set flesh and inner parts thick with fat upon the hide, covering them with an ox

paunch; but for Zeus he put the white bones dressed up with cunning art and covered with shining fat. Then the father of men and of gods said to him:

(Il. 543-544) 'Son of Iapetus, most glorious of all lords, good sir, how unfairly you have divided the portions!'

(Il. 545-547) So said Zeus whose wisdom is everlasting, rebuking him. But wily Prometheus answered him, smiling softly and not forgetting his cunning trick:

(Il. 548-558) 'Zeus, most glorious and greatest of the eternal gods, take which ever of these portions your heart within you bids.' So he said, thinking trickery. But Zeus, whose wisdom is everlasting, saw and failed not to perceive the trick, and in his heart he thought mischief against mortal men which also was to be fulfilled. With both hands he took up the white fat and was angry at heart, and wrath came to his spirit when he saw the white ox-bones craftily tricked out: and because of this the tribes of men upon earth burn white bones to the deathless gods upon fragrant altars. But Zeus who drives the clouds was greatly vexed and said to him:

(Il. 559-560) 'Son of Iapetus, clever above all! So, sir, you have not yet forgotten your cunning arts!'

(Il. 561-584) So spake Zeus in anger, whose wisdom is everlasting; and from that time he was always mindful of the trick, and would not give the power of unwearying fire to the Melian (21) race of mortal men who live on the earth. But the noble son of Iapetus outwitted him and stole the far-seen gleam of unwearying fire in a hollow fennel stalk. And Zeus who thunders on high was stung in spirit, and his dear heart was angered when he saw amongst men the far-seen ray of fire. Forthwith he made an evil thing for men as the price of fire; for the very famous Limping God formed of earth the likeness of a shy maiden as the son of Cronos willed. And the goddess bright-eyed Athene girded and clothed her with silvery raiment, and down from her head she spread with her hands a brodered veil, a wonder to see; and she, Pallas Athene, put about her head lovely garlands, flowers of new-grown herbs. Also she put upon her head a crown of gold which the very famous Limping God made himself and worked with his own hands as a favour to Zeus his father. On it was much curious work, wonderful to see; for of the many creatures which the land and sea rear up, he put most upon it, wonderful things, like living beings with voices: and great beauty shone out from it.

(Il. 585-589) But when he had made the beautiful evil to be the price for the blessing, he brought her out, delighting in the finery which the bright-eyed daughter of a mighty father had given her, to the place where the other gods and men were. And wonder took hold of the deathless gods and mortal men when they saw that which was sheer guile, not to be withstood by men.

(Il. 590-612) For from her is the race of women and female kind: of her is the deadly race and tribe of women who live amongst mortal men to their great trouble, no helpmeets in hateful poverty, but only in wealth. And as in thatched hives bees feed the drones whose nature is to do mischief—by day and throughout the day until the sun

goes down the bees are busy and lay the white combs, while the drones stay at home in the covered skeps and reap the toil of others into their own bellies—even so Zeus who thunders on high made women to be an evil to mortal men, with a nature to do evil. And he gave them a second evil to be the price for the good they had: whoever avoids marriage and the sorrows that women cause, and will not wed, reaches deadly old age without anyone to tend his years, and though he at least has no lack of livelihood while he lives, yet, when he is dead, his kinsfolk divide his possessions amongst them. And as for the man who chooses the lot of marriage and takes a good wife suited to his mind, evil continually contends with good; for whoever happens to have mischievous children, lives always with unceasing grief in his spirit and heart within him; and this evil cannot be healed.

(Il. 613-616) So it is not possible to deceive or go beyond the will of Zeus; for not even the son of Iapetus, kindly Prometheus, escaped his heavy anger, but of necessity strong bands confined him, although he knew many a wile.

(Il. 617-643) But when first their father was vexed in his heart with Obriareus and Cottus and Gyes, he bound them in cruel bonds, because he was jealous of their exceeding manhood and comeliness and great size: and he made them live beneath the wide-pathed earth, where they were afflicted, being set to dwell under the ground, at the end of the earth, at its great borders, in bitter anguish for a long time and with great grief at heart. But the son of Cronos and the other deathless gods whom rich-haired Rhea bare from union with Cronos, brought them up again to the light at Earth's advising. For she herself recounted all things to the gods fully, how that with these they would gain victory and a glorious cause to vaunt themselves. For the Titan gods and as many as sprang from Cronos had long been fighting together in stubborn war with heart-grieving toil, the lordly Titans from high Othrys, but the gods, givers of good, whom rich-haired Rhea bare in union with Cronos, from Olympus. So they, with bitter wrath, were fighting continually with one another at that time for ten full years, and the hard strife had no close or end for either side, and the issue of the war hung evenly balanced. But when he had provided those three with all things fitting, nectar and ambrosia which the gods themselves eat, and when their proud spirit revived within them all after they had fed on nectar and delicious ambrosia, then it was that the father of men and gods spoke amongst them:

(Il. 644-653) 'Hear me, bright children of Earth and Heaven, that I may say what my heart within me bids. A long while now have we, who are sprung from Cronos and the Titan gods, fought with each other every day to get victory and to prevail. But do you show your great might and unconquerable strength, and face the Titans in bitter strife; for remember our friendly kindness, and from what sufferings you are come back to the light from your cruel bondage under misty gloom through our counsels.'

(Il. 654-663) So he said. And blameless Cottus answered him again: 'Divine one, you speak that which we know well: nay, even of ourselves we know that your wisdom and understanding is exceeding, and that you became a defender of the deathless ones from chill doom. And through your devising we are come back again from the murky gloom and from our merciless bonds, enjoying what we looked not for, O lord, son of

Cronos. And so now with fixed purpose and deliberate counsel we will aid your power in dreadful strife and will fight against the Titans in hard battle.'

(Il. 664-686) So he said: and the gods, givers of good things, applauded when they heard his word, and their spirit longed for war even more than before, and they all, both male and female, stirred up hated battle that day, the Titan gods, and all that were born of Cronos together with those dread, mighty ones of overwhelming strength whom Zeus brought up to the light from Erebus beneath the earth. An hundred arms sprang from the shoulders of all alike, and each had fifty heads growing upon his shoulders upon stout limbs. These, then, stood against the Titans in grim strife, holding huge rocks in their strong hands. And on the other part the Titans eagerly strengthened their ranks, and both sides at one time showed the work of their hands and their might. The boundless sea rang terribly around, and the earth crashed loudly: wide Heaven was shaken and groaned, and high Olympus reeled from its foundation under the charge of the undying gods, and a heavy quaking reached dim Tartarus and the deep sound of their feet in the fearful onset and of their hard missiles. So, then, they launched their grievous shafts upon one another, and the cry of both armies as they shouted reached to starry heaven; and they met together with a great battle-cry.

(Il. 687-712) Then Zeus no longer held back his might; but straight his heart was filled with fury and he showed forth all his strength. From Heaven and from Olympus he came forthwith, hurling his lightning: the bold flew thick and fast from his strong hand together with thunder and lightning, whirling an awesome flame. The life-giving earth crashed around in burning, and the vast wood crackled loud with fire all about. All the land seethed, and Ocean's streams and the unfruitful sea. The hot vapour lapped round the earthborn Titans: flame unspeakable rose to the bright upper air: the flashing glare of the thunder- stone and lightning blinded their eyes for all that there were strong. Astounding heat seized Chaos: and to see with eyes and to hear the sound with ears it seemed even as if Earth and wide Heaven above came together; for such a mighty crash would have arisen if Earth were being hurled to ruin, and Heaven from on high were hurling her down; so great a crash was there while the gods were meeting together in strife. Also the winds brought rumbling earthquake and duststorm, thunder and lightning and the lurid thunderbolt, which are the shafts of great Zeus, and carried the clangour and the warcry into the midst of the two hosts. An horrible uproar of terrible strife arose: mighty deeds were shown and the battle inclined. But until then, they kept at one another and fought continually in cruel war.

(Il. 713-735) And amongst the foremost Cottus and Briareos and Gyes insatiate for war raised fierce fighting: three hundred rocks, one upon another, they launched from their strong hands and overshadowed the Titans with their missiles, and buried them beneath the wide-pathed earth, and bound them in bitter chains when they had conquered them by their strength for all their great spirit, as far beneath the earth to Tartarus. For a brazen anvil falling down from heaven nine nights and days would reach the earth upon the tenth: and again, a brazen anvil falling from earth nine nights and days would reach Tartarus upon the tenth. Round it runs a fence of bronze, and night spreads in triple line all about it like a neck-circlet, while above grow the roots of the earth and unfruitful sea. There by the counsel of Zeus who drives the clouds the Titan gods are hidden under

misty gloom, in a dank place where are the ends of the huge earth. And they may not go out; for Poseidon fixed gates of bronze upon it, and a wall runs all round it on every side. There Gyes and Cottus and great-souled Obriareus live, trusty warders of Zeus who holds the aegis.

(Il. 736-744) And there, all in their order, are the sources and ends of gloomy earth and misty Tartarus and the unfruitful sea and starry heaven, loathsome and dank, which even the gods abhor.

It is a great gulf, and if once a man were within the gates, he would not reach the floor until a whole year had reached its end, but cruel blast upon blast would carry him this way and that. And this marvel is awful even to the deathless gods.

(Il. 744-757) There stands the awful home of murky Night wrapped in dark clouds. In front of it the son of Iapetus (22) stands immovably upholding the wide heaven upon his head and unwearying hands, where Night and Day draw near and greet one another as they pass the great threshold of bronze: and while the one is about to go down into the house, the other comes out at the door.

And the house never holds them both within; but always one is without the house passing over the earth, while the other stays at home and waits until the time for her journeying come; and the one holds all-seeing light for them on earth, but the other holds in her arms Sleep the brother of Death, even evil Night, wrapped in a vaporous cloud.

(Il. 758-766) And there the children of dark Night have their dwellings, Sleep and Death, awful gods. The glowing Sun never looks upon them with his beams, neither as he goes up into heaven, nor as he comes down from heaven. And the former of them roams peacefully over the earth and the sea's broad back and is kindly to men; but the other has a heart of iron, and his spirit within him is pitiless as bronze: whomsoever of men he has once seized he holds fast: and he is hateful even to the deathless gods.

(Il. 767-774) There, in front, stand the echoing halls of the god of the lower-world, strong Hades, and of awful Persephone. A fearful hound guards the house in front, pitiless, and he has a cruel trick. On those who go in he fawns with his tail and both his ears, but suffers them not to go out back again, but keeps watch and devours whomsoever he catches going out of the gates of strong Hades and awful Persephone.

(Il. 775-806) And there dwells the goddess loathed by the deathless gods, terrible Styx, eldest daughter of back-flowing (23) Ocean. She lives apart from the gods in her glorious house vaulted over with great rocks and propped up to heaven all round with silver pillars. Rarely does the daughter of Thaumas, swift-footed Iris, come to her with a message over the sea's wide back.

But when strife and quarrel arise among the deathless gods, and when any of them who live in the house of Olympus lies, then Zeus sends Iris to bring in a golden jug the great oath of the gods from far away, the famous cold water which trickles down from a high

and beetling rock. Far under the wide-pathed earth a branch of Oceanus flows through the dark night out of the holy stream, and a tenth part of his water is allotted to her. With nine silver-swirling streams he winds about the earth and the sea's wide back, and then falls into the main (24); but the tenth flows out from a rock, a sore trouble to the gods. For whoever of the deathless gods that hold the peaks of snowy Olympus pours a libation of her water is forsworn, lies breathless until a full year is completed, and never comes near to taste ambrosia and nectar, but lies spiritless and voiceless on a strewn bed: and a heavy trance overshadows him. But when he has spent a long year in his sickness, another penance and an harder follows after the first. For nine years he is cut off from the eternal gods and never joins their councils of their feasts, nine full years. But in the tenth year he comes again to join the assemblies of the deathless gods who live in the house of Olympus. Such an oath, then, did the gods appoint the eternal and primaeval water of Styx to be: and it spouts through a rugged place.

(Il. 807-819) And there, all in their order, are the sources and ends of the dark earth and misty Tartarus and the unfruitful sea and starry heaven, loathsome and dank, which even the gods abhor.

And there are shining gates and an immoveable threshold of bronze having unending roots and it is grown of itself (25). And beyond, away from all the gods, live the Titans, beyond gloomy Chaos. But the glorious allies of loud-crashing Zeus have their dwelling upon Ocean's foundations, even Cottus and Gyes; but Briareos, being goodly, the deep-roaring Earth-Shaker made his son-in-law, giving him Cymopolea his daughter to wed.

(Il. 820-868) But when Zeus had driven the Titans from heaven, huge Earth bare her youngest child Typhoeus of the love of Tartarus, by the aid of golden Aphrodite. Strength was with his hands in all that he did and the feet of the strong god were untiring. From his shoulders grew an hundred heads of a snake, a fearful dragon, with dark, flickering tongues, and from under the brows of his eyes in his marvellous heads flashed fire, and fire burned from his heads as he glared. And there were voices in all his dreadful heads which uttered every kind of sound unspeakable; for at one time they made sounds such that the gods understood, but at another, the noise of a bull bellowing aloud in proud ungovernable fury; and at another, the sound of a lion, relentless of heart; and at anothers, sounds like whelps, wonderful to hear; and again, at another, he would hiss, so that the high mountains re-echoed. And truly a thing past help would have happened on that day, and he would have come to reign over mortals and immortals, had not the father of men and gods been quick to perceive it. But he thundered hard and mightily: and the earth around resounded terribly and the wide heaven above, and the sea and Ocean's streams and the nether parts of the earth. Great Olympus reeled beneath the divine feet of the king as he arose and earth groaned thereat. And through the two of them heat took hold on the dark-blue sea, through the thunder and lightning, and through the fire from the monster, and the scorching winds and blazing thunderbolt. The whole earth seethed, and sky and sea: and the long waves raged along the beaches round and about, at the rush of the deathless gods: and there arose an endless shaking. Hades trembled where he rules over the dead below, and the Titans under Tartarus who live with Cronos, because of

the unending clamour and the fearful strife. So when Zeus had raised up his might and seized his arms, thunder and lightning and lurid thunderbolt, he leaped from Olympus and struck him, and burned all the marvellous heads of the monster about him. But when Zeus had conquered him and lashed him with strokes, Typhoeus was hurled down, a maimed wreck, so that the huge earth groaned. And flame shot forth from the thunder-stricken lord in the dim rugged glens of the mount (26), when he was smitten. A great part of huge earth was scorched by the terrible vapour and melted as tin melts when heated by men's art in channelled (27) crucibles; or as iron, which is hardest of all things, is softened by glowing fire in mountain glens and melts in the divine earth through the strength of Hephaestus (28). Even so, then, the earth melted in the glow of the blazing fire. And in the bitterness of his anger Zeus cast him into wide Tartarus.

(Il. 869-880) And from Typhoeus come boisterous winds which blow damply, except Notus and Boreas and clear Zephyr. These are a god-sent kind, and a great blessing to men; but the others blow fitfully upon the seas. Some rush upon the misty sea and work great havoc among men with their evil, raging blasts; for varying with the season they blow, scattering ships and destroying sailors. And men who meet these upon the sea have no help against the mischief. Others again over the boundless, flowering earth spoil the fair fields of men who dwell below, filling them with dust and cruel uproar.

(Il. 881-885) But when the blessed gods had finished their toil, and settled by force their struggle for honours with the Titans, they pressed far-seeing Olympian Zeus to reign and to rule over them, by Earth's prompting. So he divided their dignities amongst them.

(Il. 886-900) Now Zeus, king of the gods, made Metis his wife first, and she was wisest among gods and mortal men. But when she was about to bring forth the goddess bright-eyed Athene, Zeus craftily deceived her with cunning words and put her in his own belly, as Earth and starry Heaven advised. For they advised him so, to the end that no other should hold royal sway over the eternal gods in place of Zeus; for very wise children were destined to be born of her, first the maiden bright-eyed Tritogeneia, equal to her father in strength and in wise understanding; but afterwards she was to bear a son of overbearing spirit, king of gods and men. But Zeus put her into his own belly first, that the goddess might devise for him both good and evil.

(Il. 901-906) Next he married bright Themis who bare the Horae (Hours), and Eunomia (Order), Dike (Justice), and blooming Eirene (Peace), who mind the works of mortal men, and the Moerae (Fates) to whom wise Zeus gave the greatest honour, Clotho, and Lachesis, and Atropos who give mortal men evil and good to have.

(Il. 907-911) And Eurynome, the daughter of Ocean, beautiful in form, bare him three fair-cheeked Charites (Graces), Aglaea, and Euphrosyne, and lovely Thaleia, from whose eyes as they glanced flowed love that unnerves the limbs: and beautiful is their glance beneath their brows.

(Il. 912-914) Also he came to the bed of all-nourishing Demeter, and she bare white-armed Persephone whom Aidoneus carried off from her mother; but wise Zeus gave her to him.

(Il. 915-917) And again, he loved Mnemosyne with the beautiful hair: and of her the nine gold-crowned Muses were born who delight in feasts and the pleasures of song.

(Il. 918-920) And Leto was joined in love with Zeus who holds the aegis, and bare Apollo and Artemis delighting in arrows, children lovely above all the sons of Heaven.

(Il. 921-923) Lastly, he made Hera his blooming wife: and she was joined in love with the king of gods and men, and brought forth Hebe and Ares and Eileithyia.

(Il. 924-929) But Zeus himself gave birth from his own head to bright-eyed Tritogeneia (29), the awful, the strife-stirring, the host-leader, the unwearying, the queen, who delights in tumults and wars and battles. But Hera without union with Zeus—for she was very angry and quarrelled with her mate—bare famous Hephaestus, who is skilled in crafts more than all the sons of Heaven.

(Il. 929a-929t) (30) But Hera was very angry and quarrelled with her mate. And because of this strife she bare without union with Zeus who holds the aegis a glorious son, Hephaestus, who excelled all the sons of Heaven in crafts. But Zeus lay with the fair-cheeked daughter of Ocean and Tethys apart from Hera.... 1)deceiving Metis (Thought) although she was full wise. But he seized her with his hands and put her in his belly, for fear that she might bring forth something stronger than his thunderbolt: therefore did Zeus, who sits on high and dwells in the aether, swallow her down suddenly. But she straightway conceived Pallas Athene: and the father of men and gods gave her birth by way of his head on the banks of the river Triton. And she remained hidden beneath the inward parts of Zeus, even Metis, Athena's mother, worker of righteousness, who was wiser than gods and mortal men. There the goddess (Athena) received that (31) whereby she excelled in strength all the deathless ones who dwell in Olympus, she who made the host-scaring weapon of Athena. And with it (Zeus) gave her birth, arrayed in arms of war.

(Il. 930-933) And of Amphitrite and the loud-roaring Earth-Shaker was born great, wide-ruling Triton, and he owns the depths of the sea, living with his dear mother and the lord his father in their golden house, an awful god.

(Il. 933-937) Also Cytherea bare to Ares the shield-piercer Panic and Fear, terrible gods who drive in disorder the close ranks of men in numbing war, with the help of Ares, sacker of towns: and Harmonia whom high-spirited Cadmus made his wife.

(Il. 938-939) And Maia, the daughter of Atlas, bare to Zeus glorious Hermes, the herald of the deathless gods, for she went up into his holy bed.

(Il. 940-942) And Semele, daughter of Cadmus was joined with him in love and bare him a splendid son, joyous Dionysus,—a mortal woman an immortal son. And now they both are gods.

(Il. 943-944) And Alemena was joined in love with Zeus who drives the clouds and bare

mighty Heracles.

(Il. 945-946) And Hephaestus, the famous Lamé One, made Aglaea, youngest of the Graces, his buxom wife.

(Il. 947-949) And golden-haired Dionysus made brown-haired Ariadne, the daughter of Minos, his buxom wife: and the son of Cronos made her deathless and unaging for him.

(Il. 950-955) And mighty Heracles, the valiant son of neat-ankled Almena, when he had finished his grievous toils, made Hebe the child of great Zeus and gold-shod Hera his shy wife in snowy Olympus. Happy he! For he has finished his great works and lives amongst the dying gods, untroubled and unaging all his days.

(Il. 956-962) And Perseis, the daughter of Ocean, bare to unwearying Helios Circe and Aeetes the king. And Aeetes, the son of Helios who shows light to men, took to wife fair-cheeked Idyia, daughter of Ocean the perfect stream, by the will of the gods: and she was subject to him in love through golden Aphrodite and bare him neat-ankled Medea.

(Il. 963-968) And now farewell, you dwellers on Olympus and you islands and continents and thou briny sea within. Now sing the company of goddesses, sweet-voiced Muses of Olympus, daughter of Zeus who holds the aegis,—even those deathless one who lay with mortal men and bare children like unto gods.

(Il. 969-974) Demeter, bright goddess, was joined in sweet love with the hero Iasion in a thrice-ploughed fallow in the rich land of Crete, and bare Plutus, a kindly god who goes everywhere over land and the sea's wide back, and him who finds him and into whose hands he comes he makes rich, bestowing great wealth upon him.

(Il. 975-978) And Harmonia, the daughter of golden Aphrodite, bare to Cadmus Ino and Semele and fair-cheeked Agave and Autonoe whom long haired Aristaeus wedded, and Polydorus also in rich-crowned Thebe.

(Il. 979-983) And the daughter of Ocean, Callirrhoe was joined in the love of rich Aphrodite with stout hearted Chrysaor and bare a son who was the strongest of all men, Geryones, whom mighty Heracles killed in sea-girt Erythea for the sake of his shambling oxen.

(Il. 984-991) And Eos bare to Tithonus brazen-crested Memnon, king of the Ethiopians, and the Lord Emathion. And to Cephalus she bare a splendid son, strong Phaethon, a man like the gods, whom, when he was a young boy in the tender flower of glorious youth with childish thoughts, laughter-loving Aphrodite seized and caught up and made a keeper of her shrine by night, a divine spirit.

(Il. 993-1002) And the son of Aeson by the will of the gods led away from Aeetes the daughter of Aeetes the heaven-nurtured king, when he had finished the many grievous

labours which the great king, over bearing Pelias, that outrageous and presumptuous doer of violence, put upon him. But when the son of Aeson had finished them, he came to Iolcus after long toil bringing the coy-eyed girl with him on his swift ship, and made her his buxom wife. And she was subject to Iason, shepherd of the people, and bare a son Medeus whom Cheiron the son of Philyra brought up in the mountains. And the will of great Zeus was fulfilled.

(Il. 1003-1007) But of the daughters of Nereus, the Old man of the Sea, Psamathe the fair goddess, was loved by Aeacus through golden Aphrodite and bare Phocus. And the silver-shod goddess Thetis was subject to Peleus and brought forth lion-hearted Achilles, the destroyer of men.

(Il. 1008-1010) And Cytherea with the beautiful crown was joined in sweet love with the hero Anchises and bare Aeneas on the peaks of Ida with its many wooded glens.

(Il. 1011-1016) And Circe the daughter of Helios, Hyperion's son, loved steadfast Odysseus and bare Agrius and Latinus who was faultless and strong: also she brought forth Telegonus by the will of golden Aphrodite. And they ruled over the famous Tyrenians, very far off in a recess of the holy islands.

(Il. 1017-1018) And the bright goddess Calypso was joined to Odysseus in sweet love, and bare him Nausithous and Nausinous.

(Il. 1019-1020) These are the immortal goddesses who lay with mortal men and bare them children like unto gods.

(Il. 1021-1022) But now, sweet-voiced Muses of Olympus, daughters of Zeus who holds the aegis, sing of the company of women.

ENDNOTES:

The epithet probably indicates coquettishness.

A proverbial saying meaning, 'why enlarge on irrelevant topics?'

'She of the noble voice': Calliope is queen of Epic poetry.

Earth, in the cosmology of Hesiod, is a disk surrounded by the river Oceanus and floating upon a waste of waters. It is called the foundation of all (the qualification 'the deathless ones...' etc. is an interpolation), because not only trees, men, and animals, but even the hills and seas (Il. 129, 131) are supported by it.

Aether is the bright, untainted upper atmosphere, as distinguished from Aer, the lower atmosphere of the earth.

Brontes is the Thunderer; Steropes, the Lightener; and Arges, the Vivid One.

The myth accounts for the separation of Heaven and Earth.

In Egyptian cosmology Nut (the Sky) is thrust and held apart from her brother Geb (the Earth) by their father Shu, who corresponds to the Greek Atlas.

Nymphs of the ash-trees, as Dryads are nymphs of the oak-trees. Cp. note on "Works and Days", l. 145.

'Member-loving': the title is perhaps only a perversion of the regular PHILOMEIDES (laughter-loving).

Cletho (the Spinner) is she who spins the thread of man's life; Lachesis (the Disposer of Lots) assigns to each man his destiny; Atropos (She who cannot be turned) is the 'Fury with the abhorred shears.'

Many of the names which follow express various qualities or aspects of the sea: thus Galene is 'Calm', Cymothoe is the 'Wave-swift', Pherusa and Dynamene are 'She who speeds (ships)' and 'She who has power'.

The 'Wave-receiver' and the 'Wave-stiller'.

'The Unerring' or 'Truthful'; cp. l. 235.

i.e. Poseidon.

Goettling notes that some of these nymphs derive their names from lands over which they preside, as Europa, Asia, Doris, Ianeira ('Lady of the Ionians'), but that most are called after some quality which their streams possessed: thus Xanthe is the 'Brown' or 'Turbid', Amphirho is the 'Surrounding' river, Ianthe is 'She who delights', and Ocyrrhoe is the 'Swift-flowing'.

i.e. Eos, the 'Early-born'.

Van Lennep explains that Hecate, having no brothers to support her claim, might have been slighted.

The goddess of the hearth (the Roman "Vesta"), and so of the house. Cp. "Homeric Hymns" v.22 ff.; xxxix.1 ff.

The variant reading 'of his father' (sc. Heaven) rests on inferior MS. authority and is probably an alteration due to the difficulty stated by a Scholiast: 'How could Zeus, being not yet begotten, plot against his father?' The phrase is, however, part of the prophecy. The whole line may well be spurious, and is rejected by Heyne, Wolf, Gaisford and Guyet.

Pausanias (x. 24.6) saw near the tomb of Neoptolemus 'a stone of no great size', which the Delphians anointed every day with oil, and which he says was supposed to be the stone given to Cronos.

A Scholiast explains: 'Either because they (men) sprang from the Melian nymphs (cp. l. 187); or because, when they were born (?), they cast themselves under the ash-trees, that is, the trees.' The reference may be to the origin of men from ash-trees: cp. "Works and Days", l. 145 and note.

sc. Atlas, the Shu of Egyptian mythology: cp. note on line 177.

Oceanus is here regarded as a continuous stream enclosing the earth and the seas, and so as flowing back upon himself.

The conception of Oceanus is here different: he has nine streams which encircle the earth and the flow out into the 'main' which appears to be the waste of waters on which, according to early Greek and Hebrew cosmology, the disk-like earth floated.

i.e. the threshold is of 'native' metal, and not artificial.

According to Homer Typhoeus was overwhelmed by Zeus amongst the Arimi in Cilicia. Pindar represents him as buried under Aetna, and Tzetzes reads Aetna in this passage.

The epithet (which means literally 'well-bored') seems to refer to the spout of the crucible.

The fire god. There is no reference to volcanic action: iron was smelted on Mount Ida; cp. "Epigrams of Homer", ix. 2-4.

i.e. Athena, who was born 'on the banks of the river Triton' (cp. I. 929l)

Restored by Peppmuller. The nineteen following lines from another recension of lines 889-900, 924-9 are quoted by Chrysippus (in Galen).

sc. the aegis. Line 929s is probably spurious, since it disagrees with I. 929q and contains a suspicious reference to Athens.

Christ Myth and Other Articles RSS feed for TBK's Christ Myth Articles

Who was Jesus Christ? Who was Jesus Christ?

Was Jesus a God, man or myth? Did he exist as a real person? The answer may shock and surprise you. Were George Washington and Thomas Jefferson Jesus

Mythicists? Did George Washington and Thomas Jefferson Believe Jesus was a Myth?

Did American Founding Fathers study the case for Christ as a mythical figure?

Is the Shroud of Turin real? Is the Shroud of Turin Real?

Is the Shroud of Turin genuine? Or is it a forgery in a long line of "pious frauds?"

Noah's Ark Is Noah's Ark Real?

Is the biblical story of Noah's Ark a true story? Was there a global flood? Many people have tried to find evidence for this tale.

Jewish historian Flavian Josephus The Jesus Forgery: Josephus

A brief paragraph in by Jewish historian is cited as proof of the existence of Jesus Christ. Is it really? Or is it a forgery?

Tacitus, Roman Politician and Historian, (c. 56-120 CE) Do Pliny, Suetonius and Tacitus Prove Jesus Existed?

Are these supposed references evidence or worthless in the quest for the historical Jesus?

Does Roman historian Suetonius refer to Jesus Christ? Is Suetonius's Chrestus a Reference to Jesus?

Does the Roman historian refer to the historical Jesus of Nazareth or another individual altogether? Does Church Father Justin Martyr Discuss the Four Canonical Gospels? Does Justin Martyr Refer to the Gospels?

When were the gospels written? Does Justin serve as evidence for their existence in his time?

The Virgin Mary crowned by angels Who was the Virgin Mary?

Who was the Virgin Mary? Was she the Mother of God? As with Jesus himself, Joseph and Mary never appear in the historical record of the time.

Who was Mary Magdalene? Who was Mary Magdalene?

Was Mary Magdalene a "common prostitute?" Was she the wife of Jesus Christ and the mother of his children?

Jesus the 'Sun of Righteousness' arises, with healing on his wings
When Was the First Christmas?

Was the first Christmas truly the birth of Jesus Christ on December 25th? Or is this holiday much older than that?

The sun at winter solstice, forming a cross of light
Is Jesus the Reason for the Season?

Christmas is a winter solstice celebration, not the birthday of the Jewish messiah and Son of God.

Egyptian hieroglyph of Orion with three loops and Sirius
The Star in the East and Three Kings

Is the gospel account of the "star in the east" followed by "wise men" from afar true? Or is it a myth based on older stories?

Isis nursing Horus
Was Horus Born on December 25th of a Virgin?

Jesus Christ is not the only god supposedly born of a virgin on December 25th. So too was Horus of Egypt.

Was the Roman god Mithra born of a virgin on December 25th?
Was Mithra Born of a Virgin on December 25th?

Mithra, the Light of the World, is an ancient sun god identified with Sol Invictus, who was born on December 25th.

Was Dionysus killed and resurrected after three days?
Was Dionysus Born of a Virgin on December 25th?

The Greek god has been depicted as born of a virgin mother on December 25th, dying and rising after three days.

Was the Greek god Attis born of a virgin on December 25th? Was he killed and resurrected after three days?
Was Attis Born of a Virgin on December 25th?

What is the evidence that the god Attis was portrayed as born of a virgin on December 25th, killed and resurrecting afterwards?

Was the Indian god Krishna born of a virgin?
Was Krishna Born of a Virgin?

The theme of the virgin mother of a god or hero was abundant in antiquity, including in India, as depicted in the Mahabharata, for one.

The Egyptian goddess Neith was the Virgin Mother of the World thousands of years before the Virgin Mary
Neith, the Virgin Mother of the World

The worship of the Egyptian goddess Neith, a sometime mother of the solar deity Horus, is traceable to around 7,000 years ago.

Chapter 1. Letter of Porphyry to Anebo
Theurgia or The Egyptian Mysteries By Iamblichos

Porphyry to the Prophet Anebo. ¹ Greeting.

I will begin this friendly correspondence with thee with a view to learning what is believed in respect to the gods and good demons and likewise the various philosophic speculations in regard to them. Very many things have been set forth concerning these subjects by the (Grecian) philosophers, but the for the most part have derived the substance of their belief from conjecture.

1. The Gods and their peculiarities

In the first place, therefore, it is to be taken for granted that there are gods. I ask then: what are the peculiarities of the superior races, by which they are differentiated from each other? Are we to suppose the cause of the distinction to be their energies or their passive motions, or things consequent: or is it a classification established by difference of bodies – the gods being distinguished by aetherial bodies, the demons by aërial bodies, and souls by bodies pertaining to the earth?

As the gods dwell in heaven only, I ask therefore, why are invocations at the Theurgic Rites directed to them as being of the Earth and Underworld? How is it that although possessing power unlimited, undivided, and unrestricted, some of them are mentioned as being of the water and of the atmosphere, and that others are allotted by definite limitations to different places and to distinct parts of bodies? If they are actually separated by circumscribed limitations of parts, and according to diversities of places and subject-bodies, how will there be any union of them one to another?

How can the Theosophers ² consider them as impressionable? For it is said that on this account phallic images are set up and that immodest language is used at the Rites? ³ Certainly if they are impassive and unimpressionable the invocations of the gods, announcing favorable inclinations, propitiations of their anger and expiatory sacrifices, and still further what are called “necessities of the gods,” will be utterly useless. For that which is impassive is not to be charmed or forced ⁴ or constrained by necessity.

Why, then, are many things performed to them in the Sacred Rites, as to impressionable beings? The invocations are made as to gods that are impressionable beings: so that it is implied that not the demons only are impressionable, but the gods likewise, as was declared in Homer:

“Even the gods themselves are yielding.”

Suppose, then, we say, as certain individuals have affirmed, that the gods are pure mental essences and that the demons are psychic beings participating of mind. ⁵ The fact remains, nevertheless, that the pure mental essences are not to be charmed or mingled with things of sense, and that the supplications which are offered are entirely foreign to this purity of mental substance. ⁶ But on the other hand the things that are offered are offered as to sensitive and psychic natures.

Are gods, then, separated from demons by the distinction of bodied and unbodied? If, however, only the gods are incorporeal, how shall the Sun, the Moon, and the visible luminaries in the sky be accounted as gods?

How is it that some of them are givers of good and others bring evil?

What is the bond of union that connects the divinities in the sky that have bodies with the gods that are unbodied?

The gods that are visible (in the sky) being included in the same category with the invisible, what distinguishes the demons from the visible, and likewise the invisible, gods?

2. The superior races and their manifestations

In what does a demon differ from a hero or half-god or from a soul? ⁷ It is it in essence, in power, or in energy? ⁸

What is the token (at the Sacred Rites) of the presence of a god or an angel, or an archangel, or a demon, or of some archon, or a soul? For it is a common thing with the gods and demons alike, and with all the superior races, to speak boastfully and to project an unreal image into view. ⁹ Hence the race of the gods is thus made to seem to be in no respect superior to that of the demons.

It is also acknowledged that ignorance and delusion in respect to the gods is irreligiousness and impurity, and that the superior knowledge in respect to them is holy and helpful: the former being the darkness of ignorance in regard to the things revered and beautiful, and the latter the light of knowledge. The former condition will cause human beings to be beset with every form of evil through ignorance and recklessness, ¹⁰ but the latter is the source of everything beneficial.

3. Oracles and Divination

What is it that takes place in divination? For example, when we are asleep, we often come, through dreams, to a perception of things that are about to occur. We are not in

an ecstasy full of commotion, for the body lies at rest, yet we do not ourselves apprehend these things as clearly as when we are awake.

In like manner many also come to a perception of the future through enthusiastic rapture and a divine impulse, when at the same time so thoroughly awake as to have the senses in full activity. Nevertheless, they by no means follow the matter closely, or at least they do not attend to it as closely as when in their ordinary condition. So, also, certain others of these ecstasies become entheos or inspired when they hear cymbals, drums, or some choral chant; as for example, those who are engaged in the Korybantic Rites, those who are possessed at the Sabazian festivals, and those who are celebrating the Rites of the Divine Mother. Others, also, are inspired when drinking water, like the priest of the Klarian Apollo at Kolophon; others when sitting over cavities in the earth, like the women who deliver oracles at Delphi; others when affected by vapor from the water, like the prophetesses at Branchidæ; and others when standing in indented marks like those who have been filled from an imperceptible inflowing of the divine plerome. Others who understand themselves in other respects become inspired through the Fancy: some taking darkness as accessory, others employing certain potions, and others depending on singing and magic figures. Some are affected by means of water, others by gazing on a wall, others by the hypethral air, and others by the sun or in some other of the heavenly luminaries. Some have likewise established the technique of searching the future by means of entrails, birds, and stars.

What, I ask, is the nature of divination, and what is its peculiar character? The diviners all say that they arrive at the foreknowledge of the future through gods or demons, and that it is not possible for others to have any inkling of it only those who have command over the things to be. I dispute, therefore, whether the divine power is brought down to such subserviency to human beings as, for instance, not to hold aloof from any who are diviners with barley-meal.

In regard, however, to the origins of the oracular art, it is to be doubted whether a god, or angel, or demon, or some other such being, is present at the Manifestations, ¹¹ or at the divinations, or at any other of the Sacred Performances, as having been drawn thither through you by the necessities created by the invocations.

Some are of opinion that the soul itself both utters and imagines these things, and that there are similar conditions of it which have been produced from little sparks; others, that there is a certain mingled form of substance produced from our own soul and from the divine in breathing; others, that the soul, through such activities, generates from itself a faculty of Imagination in regard to the future, or else that the emanations from the realm of matter bring demons into existence through their inherent forces, especially when the emanations are derived from animals.

These conjectures are put forth for the following statements:

1. That during sleep, when we are not engaged with anything, we sometimes chance to obtain perception of the future.

2. That likewise, an evidence that a condition of the Soul is a principal source of the art of divining is shown by the facts that the senses are held in check, fumes and invocations being employed for the purpose; and that by no means everybody, but only the more artless and young persons, are suitable for the purpose.

3. That likewise, ecstasy or alienation of mind is a chief origin of the divining art; also the mania which occurs in diseases, mental aberration, abstinence from wine, suffusions of the body. fancies set in motion by morbid conditions or equivocal states of mind, such as may occur during abstinence and ecstasy, or apparitions got up by technical magic. ¹²

4. That both the realm of Nature, Art, and the feeling in things of common throughout the universe, as of the parts in one animal, contain foreshadowings of certain things with reference to others. Moreover, there are bodies so constituted as to be a forewarning from some to others. Examples of this kind are manifest by the things done, namely: that they who make the invocations (at the Rites) carry stones and herbs, tie sacred knots and unloose them, open places that are locked, and change the purposes of individuals by whom they are entertained, so that from being paltry they are made worthy. They also who are able to reproduce the mystic figures are not to be held in low esteem. For they watch the course of the heavenly bodies, and tell from the position and relation of one with another whether the oracular announcements of the ruling planet will be false or true, or whether the rites which have been performed will be to no purpose, or will be expressive or archaic, although no god or demon is drawn down to them.

There are some, however, who suppose there is likewise, the subject-race of a tricky nature, artful, and assuming all shapes, turning many ways, that personates gods and demons and souls of the dead like actors on the stage; and that through these everything that seems to be good or bad is possible. They are led to form this judgment because these subject-spirits are not able to contribute anything really beneficial as relates to the soul, nor even to perceive such things; but on the other hand, they ill treat, deride, and often impede those who are returning to virtue.

They are likewise full of conceit, and take delight in vapors and sacrifices.

5. Because the begging priest with open mouth attempts in many ways to raise our expectations. ¹³

4. The invocation of the Theurgic powers

It perplexes me greatly to form a conception how they who are invoked as superior beings are likewise commanded like inferiors; also that they require the worshipper to be just, although when entreated, they themselves consent to perform unjust acts. They will not hearken to the person who is invoking them if he is not pure from sexual contamination, yet they themselves do not hesitate to lead chance individuals into unlawful sexual relations.

5. Sacrifices and Prayers.

(I am likewise in doubt in regard to the sacrifices, what utility or power they possess in the world and with the gods, and for what reason they are performed, appropriate for the beings thus honored and advantageously for the persons who present the gifts. ¹⁴)

The gods also require that the interpreters of the oracles observe strict abstinence from animal substances, in order that they may not be made impure by the fumes from the bodies; yet they themselves are allured most of all by the fumes of the sacrifices of animals.

6. Conditions for successful results

It is also required that the Beholder ¹⁵ must be pure from the contact of anything dead, and yet the rites employed to bring the gods hither, many of them, are made effective through dead animals.

What, then, is more preposterous than these things – that a human being, inferior in dignity, should make use of threats, not to a demon or soul of some dead person, but to the Sun-King himself, or to the Moon, or some one of the divine ones in the sky, himself uttering falsehood in order that they may be caused to speak the truth? For the declaration that he will assail the sky, that he will reveal to view the Arcana of Isis, that he will expose to public gaze the ineffable symbol in the innermost sanctuary, that he will stop the Baris; that, like Typhon, he will scatter the limbs of Osiris, or do something of a similar character, what is it but an extravagant absurdity, threatening what he neither knows how nor is able to perform? What dejection of spirit does it not produce in those who, like children, destitute of intelligence, are dismayed by groundless fear and terrified by these false alarms?

And yet Chairemon, the Scribe of the Temple, records these things as current discourse among the Egyptian priests. ¹⁶ It is also said that these threats, and others of like tenor, are very violent.

7. Sacred names and symbolic expressions

The Prayers also: What do they mean when they speak of the one coming forth to light from the slime, sitting on the Lotus-blossom, sailing in a boat, changing forms according to the season, and assuming a shape according to the Signs of the Zodiac? For so this is said to be seen at the Autopsias; and they unwittingly attribute to the divinity a peculiar incident of their own imagination. If, however, these expressions are uttered figuratively, and are symbolic representations of his forces, let them tell the interpretation of the symbols. For it is plain that if they denote the condition of the Sun, as in eclipses, they would be seen by every one who looked toward it intently.

Why, also, are terms preferred that are unintelligible, and of those that are unintelligible why are foreign ones preferred instead of those of our own language? For if the one who hears gives attention to the signification it is enough that the concept remains the same, whatever the term may be. For the divinity that is invoked is possibly not Egyptian in race; and if he is Egyptian, he is far from making use of Egyptian speech, or indeed of any human language at all. Either these are all artful contrivances of jugglers,

and disguises having their origin in the passive conditions induced about us through being attributed to the divine agency, or we have left unnoticed conceptions of the divine nature that are contrary to what it is.

8. The First Cause

I desire you further to declare plainly to me what the Egyptian Theosophers believe the First Cause to be; whether Mind, or above mind; and whether one alone, or subsisting with another or with several others; whether unbodied or embodied, whether the very same as the Creator of the Universe (Demiurgos) or prior to the Creator; also whether they likewise have knowledge respecting Primal Matter; ¹⁷ or of what nature the first bodies were; and whether the Primal Matter was unoriginated, or was generated. For Chairemon and the others hold that there is not anything else prior to the worlds which we behold. At the beginning of their discourses they adopt the divinities of the Egyptians, but no other gods, except those called Planets, those that make up the Zodiac and such as rise with these, and likewise those divided into decans, those which indicate nativities, and those which are called the Mighty Leaders. The names of these are preserved in the Almanacs, together with their routine of changes, their risings and settings, and their signifying of future events. For these men perceived that the things which were said respecting the Sun-God as the Demiurgos, or Creator of the Universe, and concerning Osiris and Isis, and all the Sacred Legends, may be interpreted as relating to the stars, their phases, occultations, and revolutions in their orbits, or else to the increase and decrease of the Moon, the course of the Sun, the vault of the sky as seen by night or by day, or the river Nile, and, in short, they explain everything as relating to natural objects, and nothing as having reference to incorporeal and living essences. ¹⁸

More of them likewise attribute to motion of the stars whatever may relate to us. They bind everything, I know not how, in the indissoluble bonds of necessity, which they term Fate, or allotment; and they also connect everything with those gods whom they worship in temples and with carved images and other objects, as being the only unbinders of Fate.

9. Nativities and Guardian Demons

The next thing to be learned relates to the peculiar demon or guardian spirit – how the Lord of the House ¹⁹ assigns it, according to what purpose or what quality of emanation or life or power comes from it to us, whether it really exists or does not exist, and whether it is impossible or possible actually to find the Lord of the House. Certainly, if it is possible, then the person has learned the scheme of his nativity; knowing his own guardian demon, is liberated from fate, is truly favored by divinity. Nevertheless, the rules for casting nativities are countless, and beyond comprehension. Moreover, it is impossible for expertness in astral observations to amount to an actual knowing, for there is great disagreement in relation to it, and Chairemon, as well as many others, have spoken against it. Hence the assumption of a Lord of the House (or Lords of the House, if there are more than one) pertaining to a nativity is almost confessed by astrologers themselves to be beyond absolute proving; and yet it is from this assumption, they say, that the ascertaining of the person's own personal demon is possible.

But further, I wish to be informed whether our personal demon presides over some specific one of the regions within us. For it seems to be believed by some persons that there are demons allotted to specific departments of the body – one over the health, one over the figure, and another over the bodily habits, forming a bond of union among them; and that one is placed as superior over all of them in common. And further, they suppose that there is one demon guardian of the body, another of the soul, and another of the superior mind; ²⁰ also that some demons are good and others bad.

I am in doubt, however, whether our particular demon may not be a special part of the soul; and hence he who has a mind imbued with good sense would be the truly favored one.

I observe, moreover, that there is a twofold worship of the personal demon; also, that some perform it as to two and others as to three, but nevertheless he is invoked by all with a common form of invocation.

10. Eudemonia, or the True Success

I question, however, whether there may not be some other secret path to true success which is afar from (the Rites of) the gods. I doubt whether it is really necessary to pay any regard to the opinions of individuals in regard to the divine endowment of divination and Theurgy, and whether the Soul does not now and then form grand conceptions. On the contrary, also, there are other methods for obtaining premonitions of what will take place. Perhaps, also, they who exercise the divine art of divining may indeed foresee, and yet they are not really successful: for they may foresee future events and not know how to make use of the foresight properly for themselves. I desire from you, therefore, to show me the path to success and in what the essence of it consists. For among us (philosophers) there is much wrangling, as though good might be derived from human reasonings by comparison of views.

If, however, this part of the inquiry, the intimate association with the superior race is passed over by those who devised it, wisdom will be taught by them to trivial purpose, such as calling the Divine Mind to take part about the finding of a fugitive slave, or a purchase of land, or, if it should so happen, a marriage or a matter of trade. Suppose, however, that this subject of intimate communion with the Superior race is not passed over, and those who are thus in communication tell things that are remarkably true about different matters, but nothing important or trustworthy in relation to the true success – employing themselves diligently with matters that are difficult, but of no use to human beings – then there were neither gods nor good demons present, but on the contrary, a demon of that kind called “Vagabond,” or it was all an invention of men or an air-castle of a mortal nature.

Notes:

1. Porphyry, it is well known, was a distinguished scholar, and the foremost writer in the later Platonic School. He was a native of Tyre, and his name Molech, or King, was rendered by Longinus into Porphurios, denoting the royal purple, as a proper equivalent.

He was a disciple of Plotinus, who had broadened the field of philosophic study till it included the "Wisdom of the East." In personal habits he followed the Pythagorean discipline. He was a severe critic of the Gnostic beliefs then current, and he evidently included with them also the new Christian faith. His mysticism was spiritual and contemplative, and he regarded the ceremonial rites of the Egyptian theurgy with distrust. He favored Mithraism, which prevailed in Asia, while Iamblichos belonged rather to the cult of Serapis, which was the State religion of Egypt.

Of Anebo we know little. He is addressed as an Egyptian priest, and his name is that of Anabu or Anubis, the Egyptian psychopompos and patron of sacred literature. He was a "prophet" or niter or servant of divinity, and expounder of the oracles: and Porphyry himself an "epoptes" or initiated person, asks him accordingly to explain the Egyptian theosophic doctrines respecting the divine beings, rites and religious faith.

2. The Theosophers were regarded as learned in the arcane knowledge, and especially in Theurgy. Iamblichos appears to have adopted these Rites and usages from the Egyptian worship, including with them a philosophic groundwork from the Platonic doctrines.

3. The use of images and emblems of a sacred character to typify divine power and energy is universal. Somewhat of the divine was supposed to inhere in them. The "images" and asheras or "groves" mentioned in the Bible were of this character. So was the "idol in a grove," made by Queen Maachah, as well as the simulacra which, as Herodotus states, the Egyptian women carried at the festivals.

4. Compare Gospel according to Matthew, XI, 12. "From the days of John the Baptist till now, the kingdom of heaven is forced, and they who are violent seize it."

5. Xenokrates, who was a disciple of Plato, himself taught these doctrines. He considered the heavens as divine and that the substance of the divine nature was mind pure and absolute. He also described the stars as "visible divinities." The demons were depicted as of a psychic nature, subordinate to that of the gods, and therefore subject to emotion and perturbation like human beings, while at the same time sharing in a degree in the power and intelligence of the gods.

6. Greek, the mind or "rational soul," the essence or principle of intelligence which transcends the understanding or reasoning faculty, and is capable of knowing truth intuitively and instinctively from being itself of divine origin.

7. Here Porphyry has given an ancient classification of spiritual beings into four orders, the gods, demons or guardians, the heroes or half-gods, and souls. There were other distinctions in the Eastern countries, and we find Abammon, the Teacher, adding to these the archangels, angels, and archons of both the higher and lower nature. These were named in several of the Gnostic categories that were extant at that period. "We have no conflict with blood and flesh," says the Christian apostle, "but with archonates, authorities, the world-rulers of this dark region, and spiritual forces of evil in the upper heavens."

8. By “essence” is signified the underlying principle of being; by “power” the intermediate agency; and by “energy” the operative faculty which enables actual results.

9. This inquiry in regard to the apparitions which the candidates beheld at the initiation is made plainer by Proklos: “In the most sacred stages of the Perfective Rites,” says he, “before the gods come into view, there appear intrusive figures of demons of the Underworld, to draw away the attention of the candidate from the spotless Good to the gross and material.” It may be pertinent to add that in the several Grottoes or Halls of Initiation there was machinery ingeniously constructed for the purpose of representing divine and other personages. See *The Epicurean*, by Thomas Moore, and *The Great Dionysiak Myth*, by Robert Brown, Jr., VI, 2, 3.

10. “I do not see any sin in the world,” says George Sand, “But I see a great deal of ignorance.”

11. Greek, epiphany – an apparition or manifestation, such as was exhibited in mystic and theurgic rites.

12. Goeteia (goetia), or “black magic.”

Chapter 1. Letter of Porphyry to Anebo¹³. The agurtes or begging priest generally belonged to the worship of Rhea or Cybele, the Mother. He is frequently depicted in a most unfavorable light. Apuleius speaks of a company of these emasculate priests in the eighth book of the *Metamorphoses*. They are also described in the *Republic* of Plato: “Agurtæ and Mantics frequent the houses of the rich and persuade them that they possess a power granted by the gods to expiate, by sacrifices and chants any unjust act that has been committed and that they induce the gods by blandishments and magic rites to help them. They collected money in this way, and they also followed the selling of nostrums and telling of fortunes.”

14. This paragraph is taken from Part V, Chapter I, and is not found in the text of the Letter as we have it. It is quoted there as belonging in this place. In the original Greek text the preceding paragraph appears in unbroken connection with the one which follows, and in dividing them we find it necessary to add a clause, to introduce the subject.

15. Greek, an epopt, seer, or beholder; a person admitted to the higher degree of initiation. “The Perfective Rite leads the way as the muesis or mystic initiation,” says Proklos, “and after that is the epopteia or beholding.” Theôn describes it as three degrees – “the Purification, Initiation, and Beholding of the Divine Vision.” Mr. Robert Brown, Jr., explains the last of these very fully. “This is the Autopsia or Personal Inspection, the Crown of Mysteries, the Epopteia or Divine Beholding, and he becomes an Epoptes or Contemplator.” (*Great Dionysiak Myth*, VI, 2, 3.)

As the Autoptic Visions are the principal topic in this work, the term “Beholder” is adopted uniformly for several words of the same import.

16. As the term “Egyptian” is applied only in this work to individuals of sacerdotal rank, the designation of “priest” is added. The Hierogrammateus, or Scribe of the Temple, was a priest of the lower class, and his duty was to keep the records, teach students the religious observances, and take care that they were duly obedient. The prophets were superior to the Scribes. The Temples of Egypt, like those of Babylonia, were seminaries for instruction, and all departments of Science and philosophy were included in their teachings as being Sacred Learning.

17. Greek, *hulé*; a term first adopted by Aristotle to signify the objective, negative or passive element upon which the Creative energy operates. Plato named it the “receptacle,” as containing the creative energy and making it effective.

18. Plutarch comments somewhat severely upon this mode of interpretation. In his treatise On Isis and Osiris he remarks that some individuals do not scruple to say that Osiris is the Sun, Isis no other than the Moon, and that Typhon is fire, or drouth, or the Ocean. But he adds in rebuttal: “No one can rationally imagine that these objects can be gods in themselves; for nothing can be a god that is either without soul, or under the power of natural objects.” He also remarks that “there is an excellent saying among philosophers, that they who have not learned the true sense of words will also mistake in the things that are meant.”

19. Greek, *oikoresmotys*: Hebrew, Baal Zebul. In astrology a “house” is a twelfth part of the sky as marked out for the purpose of horoscopes. Every sign of the Zodiac thus had a “house,” which a planet or planetary genius was considered as occupying, and thence ruling the days and events of the month to which it belonged.

20. Compare First Epistle of Paul to the Thessalonians, V, 23: “Spirit and soul and body.”

Chapter 2. Reply of Abammon the Teacher to The Letter of Porphyry to Anebo.

Part I. The Gods and their peculiarities
Theurgia or The Egyptian Mysteries By Iamblichos
Introduction

Hermes ¹, the patron of literature, was rightly considered of old to be a god common to all the priests ² and the one presiding over the genuine learning relating to the gods, one and the same among all. Hence our predecessors were wont to ascribe to him their discoveries in wisdom and to name all their respective works Books of Hermes.

If, therefore, we participate in this god ³, of the measure which has fallen to us and become possible to us, thou dost well to propose these questions in regard to the Divine Sciences to the priests as to friends for an accurate solution. Having good reason therefore for considering the letter sent by thee to Anebo, my pupil, as having been written to myself, I will answer thee truly in regard to the matters about which thou hast enquired. For it would not be becoming that Pythagoras, Plato, Demokritos, Eudoxos, and many others of the old Greeks, should have obtained competent instruction from the temple-scribes of their own time ⁴, but that thou who art contemporary with us, and having the same disposition as they, should be turned away by those now living and recognized as public teachers.

Accordingly, I myself engage thus in the present discussion. Thou, if thou dost so choose, art at liberty to consider the person who is now writing to thee as the same individual to whom thou hast sent thy letter. If, however, it shall seem to thee more proper, then regard the individual who is discoursing with thee in writing to be one or some other prophet of the Egyptians, for this is not a matter worth differing about. Or, as I think still a better way, let it pass unnoticed whether the person speaking is of inferior or superior rank, and direct the attention solely to the things that are uttered, thus arousing the understanding to eagerness simply as to whether that which is said be true or false.

In the first place, let us take the subjects separately in order to ascertain the scope and quality of the problems which are now proposed for discussion. Next let us examine in detail the theories respecting divine matters from which thy doubts were conceived, and make a statement of them, as to the sources of knowledge by which they are to be investigated.

Some which are badly jumbled together require to be taken apart; while others have relation to the Divine Cause through which everything exists, and so are readily apprehended. Others which we might put forward according to a certain plan of exhibiting contradictory views, draw out the judgment in both directions; and there are likewise some which demand from us to explain the whole of the Initiatory Rites.

Such being the facts, our answers are to be taken from many places and from different sources of knowledge. Some of these introduce fundamental principles from the traditions which the sages of the Chaldaeans delivered; others derive support from the doctrines which the Prophets of the Egyptian temples teach; and some of them follow closely the speculations of the Philosophers and elicit the conclusions which belong to them. And now there are some of these which involve an unbecoming dispute from diverse notions that are not worthy of a word; and others that have their origin from prejudices common to human beings. All these, therefore, are to be disposed of in various ways by themselves, and are in many ways connected with one another.

Hence, on account of all these things, there is some discussion necessary for the directing of them properly.

PLAN OF THE DISCUSSION

We will, therefore, set forth to thee the hereditary opinions of the Assyrian Sages ⁵ in regard to the True Knowledge, and will show thee in plain terms our own. Some things in the Gnosis will be brought into the discussion from the innumerable arcane writings, and the rest will be from the works upon the entire range of Divine Matters, which the old compilers have collected into a book of limited dimensions.

If, however, thou wouldst propose some philosophic question, we will determine it for thee according to the ancient Tablets of Hermes ⁶, which Plato and Pythagoras, having studied thoroughly beforehand, combined together in Philosophy.

But questions that are foreign to the subject, or that are disputatious and exhibit a contentious disposition of mind, we shall tone down gently and aptly, or else show their impropriety. So far also as they go in the line of common ways of thinking we shall try to discuss them in a familiar manner. Those, likewise, which require the experiences of the Divine Dramas ⁷ for an intelligent understanding we will, as far as it is possible, explain by words alone ⁸; but those which are likewise full of intellectual speculation will be shown to be effective for purifying (from the earthly contamination).

It is possible, however, to tell the signs of this which are worthy to be noted, and from these both thou and those who are like thee in mind can be brought near to the very essence of things that have real being ⁹.

So far, however, as they may be actually known through words, none of these matters will be left without a perfect demonstration, and in reference to everything we shall give thee carefully the proper explanation. Those which relate to divine matters we will answer as theologists; and those which pertain to Theurgy we will explain theurgically. Those of a philosophic character we will search out with thee as philosophers, and such as extend to the Primary Causes we will bring forth into light following the argument together according to first principles. Such, however, as pertain to morals or final results we will determine properly according to ethical form; and other questions, in like manner, we will treat according to their proper place in the arrangement.

We will now proceed to thy questions.

TWO FORMS OF KNOWING

Thou beginnest accordingly by saying: "In the first place, it is to be taken for granted that there are gods." Speaking in this way is not right. For the inborn knowledge in respect to the gods is coexistent with our very being, and is superior to all judging and deciding beforehand. Indeed, it is preexistent both to argument and demonstration, and is united interiorly from the beginning to its own divine cause and is coexistent with the inherent longing and impulse of the soul to the Good ¹⁰.

If, however, we must speak truly, the conjoining to the divine nature is not knowing, for this is kept separate after a manner by an otherness. ¹¹

Prior to this knowing, however, which is as of one individual having knowledge of another, the intimate union as in a single concept is self-originated and indistinguishable. Hence we ought to concede the point as though possibly it might not be granted, not to assume it as a matter of uncertainty'. for it always existed simply in energy. Nor is it proper to put it to proof in this way as though we had authority to judge and reject ; for we are ourselves encompassed in it, or rather we are filled by it, and the very selfhood which we are we possess in this knowing of the gods ¹².

I have, moreover, the same thing to say to thee in regard to the Superior races which come next in order after the gods. I mean the demons, heroes, and uncontaminate souls ¹³.

For it is always necessary to bear in mind respecting these subordinate races that they have one defined form of essence; also that we put aside from our conception of them the indefiniteness and instability which are incident to the human constitution and renounce the tendency to incline to the other side which arises from attempts to counterbalance the opposition of the arguments. For such a thing is foreign to the principles of reason and life, but is derived from secondary sources, such even as belong to the power and contrariness of the realm of generated existence. It is necessary, however, to treat of them as being of a uniform nature.

Let it be admitted, then, that with the companions of the gods ¹⁴ in the eternal region there is the innate perception of them.

Therefore, even as they have their being always after the same manner, so also the human soul is conjoined to them by Knowledge according to the same principles; never by any conjecture, opinion or reasoning which have their beginning in Time pursuing the essence which is beyond all these, but by pure and faultless intuitions which it received out of eternity from the gods being conjoined with them in these principles.

Nevertheless, thou seemest to consider the knowing of divine beings to be the same as the knowing of other matters, and likewise that a point may be taken for granted from opposing arguments, as is usual in debates. But there is no such similarity. For the perceiving of them is absolutely distinct from everything of antithetic character. It is not made valid by being now conceded or by coming into existence, but on the other hand it is a single concept, and coexisted with the soul from eternity.

I say such things to thee, therefore, in regard to the first principle in us, at which it is necessary for those to begin who would both speak and hear anything whatever concerning the superior races or about ourselves.

PECULIARITIES OF THE SUPERIOR RACES

Then follows thy question: "What are the peculiarities of the Superior races by which they are differentiated from each other?" If by peculiarities" thou meanest differences as of species under the same genus, which are distinguished by opposite characteristics,

as rational and irrational under the head of animal, we by no means admit the existence of such differences in beings that neither have one common essence ¹⁵ nor characteristics diverse from one another, nor have received an organization from a common source which is undefined and yet defines the peculiarity.

If, however, thou supposest the peculiarity to be a certain simple condition limited in itself, as in primary and secondary races, which differ in their entire essence and in the whole genus, thy notion of the peculiarities is reasonable. For these peculiarities of beings that always exist will all be in some manner set apart, separate and simple.

The questioning, however, is going forward to little purpose, for it behooves us, first of all, to ascertain what the peculiarities are in regard to essence, then in regard to power, and so, after that, what they are in regard to energy. But as thou hast now put the question in reference to certain peculiarities which distinguish them, thou speakest only of the peculiarities of energies. Hence thou askest the difference in them in respect to the last things as mentioned, but art passing over unnoticed, without questioning, the first, and, as relating to the elements of variableness, the most important of them.

Moreover, there is something added in the same place in regard to “active or passive motions.” This is a classification not at all proper as relates to the superior races; for in none of them is there the contrast of active and passive, but certain of their energies are to be contemplated as unconditioned, unrestrained, and without relation to anything opposing. Hence we do not admit in regard to them that there are such motions as active and passive in respect to the soul. For we do not concede self-motion from moving and being set in motion; but we suppose that there is a certain unique self-originating motion which is its very own, and not an aptitude derived from an outside source taking from it action in itself and a passive condition by itself. Who, then, may admit in respect to the races superior to the soul that they are to be distinguished by the peculiarities of active and passive motions? ¹⁶

Further, therefore, that expression which is added, “or things consequent,” is inconsistent with their nature. For in the case of those of composite nature, and of those that exist together with others or in others, or that are encompassed by others, some are conceived of as leading and others as following, some as being themselves essences and others as contingent upon essences. For there is an arrangement of them in regular order, and there intervenes unfriendliness and disagreement between them. But in regard to the superior races, they are all to be considered as self-subsisting. The perfect ones take rank as chiefs, and are separate by themselves, and neither have their substance from others or in others. Thus there is nothing about them that is “consequent.” In no respect, therefore, is their peculiarity characterized from these.

And now there occurs at the end of the question the natural distinction. The question is whether the essences are to be known by energies, physical motions, and things consequent. Everything, however, is to the contrary. For as the energies and motions made up the actual substance of the essence, they would themselves likewise be dominant in regard to their difference. If, however, the essences generate the energies,

being themselves previously separate, then they impart to the motions, energies, and things consequent, that which constitutes the differences. This mode, therefore, is contrary to what is supposed in the present bunt to find the peculiarity.

In short, however, whether thou imaginest that there is one race of gods and one of demons, and in like manner of heroes (or half-gods), and after the same course of things, of unbodied souls, or whether thou supposest that there are many races in each category, thou demandest that the distinguishing of them shall be according to peculiarities. For if thou supposest each race to be a unit, the whole arrangement of divine orders according to the more perfect classification ¹⁷ is overturned; however, they are defined by these according to race, as it may seem satisfactory, and there is not among them one common definition in relation to essence except that those that are prior are distinguished from the inferior races, it is not possible to find out their common boundaries. And even though it should be possible, this very thing takes away their peculiarities. Hence the object which is sought is not to be found in this way. He, however, will be able to define their peculiarities who reasons upon the analogous sameness in the higher orders; as, for example, with the many races among the gods, and again with those among the demons and half-gods, and lastly with souls. hence it has been demonstrated by us through this argument what is the right course of the present investigation, its limitation, and how it is possible for it to be made.

ARRANGEMENT OF THE SUPERIOR ORDERS

Let us next proceed with the answers, one after another, to the questions which have been asked. There is then the Good: both that which is beyond essence and that which exists through essence. I am speaking of that essence which is the 'most ancient and most to be revered, and which, as to is incorporeal. ¹⁸ It is a special peculiarity of the gods, and is characteristic of all the races that are included with them; and hence, not being divided from this, but existing in like manner the same in them all, it preserves their peculiar distribution and arrangement.

SOULS

But with souls that are ruling over bodies, that are occupied with the care of them, and that are placed in order apart by themselves in the eternal regions, before the transition to generated existence, there is not present either the essence of the Good, or the Cause (or Supreme Principle) of the Good which is prior to essence; but there comes from it a certain participation and habit of good, as we perceive that a sharing of beauty and virtue is very different from what we observe with human beings. For this is equivocal, and becomes manifest in complex natures as sole thing acquired. But the principle of goodness is established unchangeable and perpetual in the Souls. It never at any time goes away from itself, nor is it taken away by anything else.

DEMONS AND HEROES OR HALF-GODS

Such then being the case with the divine races, the first and the last (the gods and souls), let us consider the two races intermediate between these two extremes, namely: 1. That of heroes or half-gods, which not only ranks higher than the order of souls in power and virtue, moral beauty and greatness, and excels it in every good quality which is incident in souls, but is also closely joined to. them by the kindred relationship of a

similar form of life. 2. The other, the race of demons, which is closely allied to the gods, yet is in a certain sense inferior to them, following as though it was not first in rank but accompanying in subservience to the good pleasure of the gods. This race causes the otherwise invisible goodness of the gods to become visible in operation, becoming itself both assimilated to it, and accomplishing perfect works that are like it. For then what was before unutterable in it is made capable of being uttered, what was without form is caused to shire forth in visible figures, whatever of it was beyond all reasoning is brought forth into plain words, and having already received the connate participation of beautiful gifts it bestows the same ungrudgingly, and transfers them to the races that rank after itself.

Thus these intermediate races complete the common bond of gods and souls and render the connection between them indissoluble. They not only bind these together in one continuous series, from those on high to the very last, but they make the union of them all incapable of being separated and to be a most perfect blending and an equal intermingling of them all. They likewise, after a manner, cause an outgoing influence to go forth equally from the superior to the inferior races and a reciprocal one from subordinate races to those ranking above them. They also establish order among the more imperfect races, and likewise due proportions of the gift coming down from the better ones and of the reception which takes place; and having themselves received from above from the gods the causes or motives of all these, they make everything agreeable and suited in every respect to all.

Thou must not think, therefore, that this classification is a peculiarity of powers or of energies or of essence; nor art thou taking them separately, to inspect them one by one. Nevertheless, by extending the inquiry through all of them thou wilt complete the answer to what was asked in relation to the peculiarities of gods, demons and half-gods, and of those that are included in the category of souls.

Let us proceed again, by another line of argument. Everything, whatever it may be, and of whatever quality, that is united, that is firmly established in itself by unalterable law and is a cause among the indivisible essences – that is immovable, and so is to be considered as the cause of all motion – that is superior to all things and has nothing whatever in common with them – that is to be generally considered as wholly unmingled and separate, not only in being but in power and energy – every such thing should be ascribed to the gods as being worthy of them. But that which is already divided into a great member, that which can give itself to other objects, that which both receives from others the limitation within itself and is sufficient for the distribution among imperfect ones to make these complete, that nevertheless participates in the primary and life-giving motion ¹⁹ and has communion with all things self-existent and coming into existence, that receives a commingling of substances from them all and imparts a radiating influence from itself to all, and that extends these peculiar properties through all the powers, essences and energies in itself-all this, speaking what is true, we shall ascribe to souls, as being implanted in them.

THE INTERMEDIATE RACES

What shall we say, then, in regard to the intermediate races? I think from what has been

said already that they are sufficiently manifest to every one; for they make complete the indivisible connection between the extreme races. ²⁰ Nevertheless, it is necessary to continue the explanation. I assume, accordingly, the race of demons to be a multitude in one, to be commingled in an unmingled manner, and to accept the lower races as associated with a distinct concept of the most excellent. But on the other hand, I describe the race of heroes or demi-gods as being placed over more common distribution and multitude, and likewise over action and commingling, and matters akin to these. It also receives gifts from above, transcendent, and as though concealed within – I mean union, purity of nature, stable condition, and undivided identity and superiority over others. For each of these intermediate races is next to one of the extreme races beyond – one to the first and the other to the last. It follows as a natural result that by a continued series of kindred relations the demonian race, beginning from the highest in rank, proceeds to the lower races, and that the other, having primarily a connection with the last of them all, should in some way have communication with those that are superior.

Hence there may be perceived the complete joining to gather into one of the first and last races (the gods and souls) through the intermediates (the demons and half-gods), and the entire sameness of nature, alike equally in substance, and also alike in power and energy. ²¹ Whereas, therefore, we have made the classification of the four races in these two ways perfectly complete, we think it sufficient in regard to the others that for the sake of brevity, and because that which remains – the comprehending of the intermediate tribes – is in a measure already plain, we exhibit only the peculiarities of the extreme races. Hence we shall pass over the intermediate tribes as being already well known, and make a sketch of the others in some way in very few words.

Notes:

Chapter 2. Reply of Abammon the Teacher to The Letter of Porphyry to Anebo.1. Hermes is here the same as the Egyptian divinity, Thoth or Tahuti, the god of learning and medicine. He was regarded as the Scribe or recorder who registered the actions of the dead and living, so that they “were judged out of those things which were written in the books.” He was also the revealer of the divine will to men. His name Tahuti signifies “thrice great” or “very great,” or Trismegistos, Greek.

Chapter 2. Reply of Abammon the Teacher to The Letter of Porphyry to Anebo.2. The priests in Egypt consisted of many orders, including those who performed the Rites, the learned profession which included prophets, philosophers, poets, authors, physicians, artists, master mechanics, and also embalmers of the dead.

Chapter 2. Reply of Abammon the Teacher to The Letter of Porphyry to Anebo.3. This form of expression extends through this entire book. Though hardly familiar to us, it was formerly common in philosophic writings. The gods being spiritual essences, it was very properly considered that their worshipers would participate in their substance as we partake of the air that we inhale. In this way their powers and virtues were supposed to be imparted to the recipients. This treatise accordingly mentions the gifts received by

the persons initiated at the telestic or Theurgic Rites, as a participating of the gods. The fact that they represent or personify qualities rather than individualities makes this mode of speaking eminently proper.

Chapter 2. Reply of Abammon the Teacher to The Letter of Porphyry to Anebo.4. In archaic periods, the worship and literature of every people was exclusive. Every repast being accompanied by religious ceremonies, the Egyptians would not eat with foreigners. Ashmes II broke through this restriction and made treaties of friendship and commerce with several Grecian and Ionian States. By his command, and at the instance of Polykrates of Samos, a tyrant-king, Pythagoras was admitted to instruction at the temples, and formally initiated into the sacerdotal caste. After the Persian conquest others resorted to Egypt for similar purposes; among them Plato, Demokritos, Archimedes, Chrysippos, Euripides.

Chapter 2. Reply of Abammon the Teacher to The Letter of Porphyry to Anebo.5. It is evident that there was a Gnosis, or Sacred Doctrine common to the religions of the principal countries, and that its focus was at Babylon. Compare Jeremiah LI. 7 and Revelation XVII. Iamblichos lived chiefly at Khalkis In Syria, and was familiar with the magi and learned men of Persia and Assyria. Hence as Abammon he refers the Gnosis to that region.

Chapter 2. Reply of Abammon the Teacher to The Letter of Porphyry to Anebo.6. The Stellae, Pillars or Tablets of Thoth, appear to be little else than a figurative expression for the sacred learning in possession of the Sacerdotal Caste in Egypt. When we call to mind that the Pyramids in that country, before their spoilation, were cased all over with tablets of stone on which hieroglyphic writing was engraved, we shall the better apprehend the significance of the allusion of Abammon.

Chapter 2. Reply of Abammon the Teacher to The Letter of Porphyry to Anebo.7. Greek, ergatheia divine works or performances; the exhibitions at the Mystic Rites. As these were dramatic representations to prefigure experiences of a spiritual character, we substitute the term "drama" as more likely to afford a clearer conception of the meaning. Element designated the Eleusinic "drama."

Chapter 2. Reply of Abammon the Teacher to The Letter of Porphyry to Anebo.8. Mr. Gale, editor of the Greek text of this work as published at Oxford, was of the opinion that the reading of the original was corrupt, and suggested an emendation which may be rendered as follows: "It is impossible to explain by mere words." This would be in harmony with the statement in the Second Pauline Epistle to the Corinthian believers: "He was carried suddenly to paradise and heard things ineffable which it is not permitted to a human being to utter familiarly."

Chapter 2. Reply of Abammon the Teacher to The Letter of Porphyry to Anebo.9. Plato and his disciples employ the principle or being to denote the Absolute Divinity; also the phrase ontws on real being or that which really is or has being, as contrasted with the "genesis" or objective existence.

Chapter 2. Reply of Abammon the Teacher to The Letter of Porphyry to Anebo.10. It was the practice of the philosophers to make use of abstract terms to represent the Supreme and Absolute. Of this character are to agathon the Good; to alhqes the True, o eis the One.

Chapter 2. Reply of Abammon the Teacher to The Letter of Porphyry to Anebo.11. Power and energy are thus distinguished from their result. Damaskios remarks that "where there is not otherness, there will be no knowing. A union or conjunction, as of one to another, is superior to knowledge." Plato taught, says Professor Cooker, that man longs for the good, and bears witness by his restlessness and disquietude; that he instinctively desires it, and that he can find no rest and satisfaction in anything apart from the knowledge and participation of the Supreme Absolute Good.

Chapter 2. Reply of Abammon the Teacher to The Letter of Porphyry to Anebo.12. The Chaldaean Oracles quoted by Damaskios declare that "the prolific fountain of souls is encompassed by the two Minds." He adds that "the fiery signals which draw down the ripe ones are in God," which Simplicios explains: "The Unbodied ones are the supreme Mind and God being Source and Cause."

Chapter 2. Reply of Abammon the Teacher to The Letter of Porphyry to Anebo.13. Damaskios described the "demons" as tutelary spirits of a nature essentially divine. They were said to have charge of the oracles and worldly affairs generally. The "heroes" or demigods were a lower race in the order of emanation. The term denotes the son of a divinity, with a human parent. Uncontaminated souls are such as are not impure from the attraction of the genesis or domain of phenomenal existence.

Chapter 2. Reply of Abammon the Teacher to The Letter of Porphyry to Anebo.14. The Platonic philosophers before Iamblichos taught that the many gods are the "outshinings" or emanations of the one Superessential Deity and not substances complete of themselves. The Ancient Sadducees are said to have held a similar opinion, not denying the actual existence of angels and spirits, but that they existed permanently by inherent energy. The same sentiment appears in the ninety-fifth (ninety-sixth) Psalm. The Chaldaean Oracle, however, declared that "Not from the eternal source did anything run forth incomplete."

Chapter 2. Reply of Abammon the Teacher to The Letter of Porphyry to Anebo.15. Plato defines essence as that which has "real being," and describes it as "colorless, formless, and intangible, visible only to the mind or higher reason that guides the soul."

Chapter 2. Reply of Abammon the Teacher to The Letter of Porphyry to Anebo.16. Plato bases upon this fact the immortality of the soul. The soul originates its own action and receptivity by volition. This volition is self-motion, and is that quality of moral freedom which has placed human beings above and apart from the animal tribes.

Chapter 2. Reply of Abammon the Teacher to The Letter of Porphyry to Anebo.17. In the Assyrian or Chaldaean Plan of Divine Orders, the following are instanced by Damaskios: 1. The Intellectible Gods. 2. The Hyparchs or superior archons. 3. The

Archons. 4. The Archangels. 5. The Azoni or unclassified who belong to no defined jurisdiction. 6. Local Genii. This arrangement is hinted at in Part VIII, § 2.

Chapter 2. Reply of Abammon the Teacher to The Letter of Porphyry to Anebo.18. This is the common dogma of every ancient faith. In the Hindu category, the Brahman is the Good which is beyond essence and absolute, while Brahmá is identical with essence. The Parsis acknowledge Zurvan, the Unlimited, and Ahura Mazda, the Divine Creator. The Egyptian priests worshipped Amun, the hidden One, and Ptah, the Demiurgos or Architect of the Universe.

Chapter 2. Reply of Abammon the Teacher to The Letter of Porphyry to Anebo.19. Iamblichos is generally regarded as here endeavoring to reconcile the apparent discrepancy between Plato and Aristotle – the latter described the soul as immovable, and Plato as self-moving, in which statement he refers to operation and not to essence. Syrianos explains that the soul is self-moving because it is set in motion from itself and certainly not by an agent inferior to itself. Proklos adds that the soul is self-moved in respect to the body and things of sense which plainly are set in motion from without themselves.

Chapter 2. Reply of Abammon the Teacher to The Letter of Porphyry to Anebo.20. The gods above and the souls below, angels, demons and demigods.

Chapter 2. Reply of Abammon the Teacher to The Letter of Porphyry to Anebo.21. This distinction of principles is noted in the Chaldaean Oracles. Pythagoras indicates the same by the terms monad, duad, triad; Plato by peras, apeiron, and mikton; Damaskios by the One, the many, and the union. Another version of the Oracles in place of “Substance” has Father, and for “energy” Mind or Reason.

Theurgia or The Egyptian Mysteries By Iamblichos
PECULIARITIES OF THE GODS AND SOULS
DISTINCTIONS OF THE SUPERIOR RACES
HOW DIVINE RACES ARE DISTRIBUTED
SUPERIOR BEINGS NOT CLASSIFIED AS PASSIVE AND IMPASSIBLE

Chapter 3. The Superior Races
Theurgia or The Egyptian Mysteries By Iamblichos
PECULIARITIES OF THE GODS AND SOULS

In regard to the extreme races (the gods and souls) the former is chief, superior and perfect; the other is inferior and imperfect. The former can do all things at once uniformly and now; but the other is neither able to do anything completely nor immediately; neither speedily nor individually. The former generates all things and is guardian over them; but the latter has a natural disposition to yield and to turn submissively toward what it generates and has under guardianship. The former, being the original cause, has preeminence over all; but the latter, being dependent upon the pleasure of the gods as from a cause, is coexistent with it from eternity. The former in a single decisive moment grasps the ends of all the energies and essences; but the latter passes from some things to others and goes forward from the imperfect to the perfect. Further still, there exists with the former the highest and unlimited, superior to all measurement, and so completely formless as to be circumscribed by no formative principles; but the latter is dominated by impulse, habit and inclination, and is held fast

both by longings for that which-is inferior and by being familiar with things of a secondary character. At length it is moulded in various ways and proportions from them. Hence MIND, the leader and king of the things that actually are, the demiurgic art of the universe, is always present with the gods in the same manner, completely and abundantly, being established in itself unalloyed according to one sole energy. But the soul partakes of divisible and multiform mind, ¹ adapting itself to the supreme authority over all. It also takes care of unsouled beings, having been itself born into various forms at different times. From the same causes, order itself and beauty itself are coexistent with the Superior races; or if it is desired so to express it, the First cause is coexistent with these. But with the soul the allotment of intellectual order and divine beauty is always associated. With the gods, the measure of all things, or rather the cause of it, is perpetually coordinate; but the soul is confined to the divine limit and only participates of this in a limited degree. With good reason there may be ascribed to the gods dominion over all beings, by the power and supreme authority of the First Cause; but the soul has defined limits within which it can have command.

Such being the different peculiarities of the races at the highest and lowest extremes, what we have now been saying may be understood without difficulty, and also the peculiarities of the intermediates, the demons and half-gods; these being each next to one of the extremes, resembling both and going out from both to the intermediate region, and so effecting a harmonious union by commingling them and joining them together in due proportions.

Let such, then, be considered the peculiarities of the first divine races.
DISTINCTIONS OF THE SUPERIOR RACES

Surely we do not admit the distinction of the Superior races to be what is suggested by thee: "a classification established by difference of bodies, the gods being distinguished by ætherial bodies, the demons by aërial bodies, and souls by bodies pertaining to the earth." Such an arrangement would be like the assigning of Sokrates to a tribe when he was a Prytanis, ² and is not proper to be admitted in regard to the divine races, which are all by themselves, unbound and free. ³ To make bodies their own first causes, as to their specific nature, appears to be a fearful absurdity; for they are subservient to these causes and subject to the conditions of generated existence.

Further still, the races of Superior beings are not in the bodies, but govern them from outside. Hence they do not undergo changes with the bodies. Yet they give from themselves to the bodies every such good as the latter are able to receive, but they themselves receive nothing from the bodies. Hence they cannot have received from them any peculiarities. For if they were as habits of the bodies, or as material forms, or some other body-like quality, it might be possible for them, perhaps, to undergo change together with the different conditions of the bodies. But if they preexist separate from bodies, and unmingled with them, what rational distinction originating from the bodies can be developed in them?

In fact, this proposition in regard to these races makes the bodies actually superior to

the divine races, since by such a hypothesis they furnish a vehicle for the superior causes and fix in them the peculiarities incident to their essence. Nevertheless, it is plain that if the allotments, distributions and assignments of those that govern are arranged with those that are governed this authority will be given to the more excellent. For it is because those that are placed over others are such that they receive thereby such an allotment, and give this a specific character; but the essence itself does not become assimilated to the nature of the corporeal receptacle. ⁴

Hence I may speak as regards this subject in its turn, but a supposition of this kind must be admitted in respect to the imperfect soul. For such a mode of living as the soul projected, and such an ideal as was ready before entering into a human body, there is a corresponding organic body, joined to it and a similar nature which receives its more perfect life. ⁵

In respect to the superior races and those which as being universal include the origin of all, the inferior ones are produced in the superiors, the corporeal in the incorporeal, and, being encompassed by them in one circle, are governed by them. Hence the revolutions of the heavenly spheres ⁶ have been induced originally by the aetherial soul and are always inherent in it. The souls of the world also being extended to their own mind, are absolutely encompassed by it and primarily generated in it. In like manner also, the Mind, both that which is divisible (into attributes and qualities) and that which is entire, is included (as essential quality) of the superior races. Hence the secondary races, being always turned toward the primary, and the superiors leading the inferiors as exemplars, essence and ideal come to the lower races from those which are superior, and those which are ignoble are produced primarily in the more excellent. Hence, accordingly, order and proportion come from the latter to the inferior races, and these are what they are through the former. But there is no transmitting of peculiarities from the inferior races to those which precede them.

Such a classification, therefore, based on corporeal conceptions, is shown by these arguments to be false. Even though in this case it may seem otherwise to thee, the false assumption is not worthy of a word. Such a case does not exhibit abundant argument, but one belabors himself to no purpose if he puts forth hypotheses and then endeavors to refute them as not being true. For in what way is essence, which is absolutely incorporeal, having nothing in common with the bodies that partake of it, to be distinguished from such bodies? Not being in any way present with the bodies as a matter of place, how is it to be separated by places after the corporeal manner? And not being separated by circumscribed divisions of subject matter, how is it to be held in a divided condition by the divisions of the world? But what is more, what is there that can hinder the gods from going everywhere? What is there to hold their power in check, from extending to the vault of the sky? For this would be the work of a cause far mightier than the one shutting them in and circumscribing them within certain parts. Real being – that which truly is, and which is in itself incorporeal – is everywhere, wherever it pleases. Yet, as thou takest for granted, that which is divine and which transcends all things is itself transcended by the perfectness of the entire world, and is encompassed by it in a specific division, and hence is inferior in respect to bodily dimensions. Yet if there is no divine creation and no participation of divine ideals

extending through the whole world, I do not see, for my part, any opportunity for a creating and framing of them after specific forms.

In short, however, this opinion which banishes the presence of the superior races entirely from the earth is an abrogating of the Sacred Rites and theurgic communion of the gods with human beings. For it says nothing else than that the divine ones dwell apart from the earth, that they do not commingle with human beings, and that this region is deserted by them. Consequently, according to this reasoning we priests have never learned anything whatever from the gods, and since we differ in nothing from other men thou hast not done right in questioning us as though we knew more than others.

Not one of these statements of thine, however, is sound. For neither are the gods limited to parts of the earth, nor are the inferior races about the earth excluded from their presence. On the contrary, the superior races are characterized in this way: that they are encompassed by nothing and that they encompass all things in themselves. But those that belong to the earth have their being in the perfections (pleromas) of the gods, and when they become fit for the divine communion they at once, prior to their own essence, possess the gods that preexisted in it.

That this entire classification is false, that this plan of investigating peculiarities is irrational, and that the notion of distributing the gods each to a certain region does not permit the receiving of the entire essence and power which are in them, we have fully established. It would have been right, therefore, to omit the dissenting inquiry in regard to the distribution of the Superior races, as it contradicts nothing in regard to the true conceptions. On the other hand, our attention should be directed, instead, to the intelligent perception of matters relating to the gods, and not to the holding of a discussion with a man; and for this reason we shall adapt the present discourse to the disposing of subjects of probability and matters relating to the gods.

HOW DIVINE RACES ARE DISTRIBUTED

I assume accordingly that thou askest a solution of that matter of which thou seemest to be in doubt, namely: "As the gods dwell only in Heaven, why are invocations at the Theurgic rites directed to them as being of the Earth and Underworld?"

This position which is thus assumed at the beginning, namely: that the gods traverse heaven only, is not true; for the universe is full of them. But thou then demandest: "How is it that although possessing power unlimited, undivided, and unrestricted, some of them are mentioned as being of the water and of the atmosphere, and that others are allotted by definite limitation to different places and distinct parts of bodies? If they are actually separated by circumscribed limitations of parts, and according to diversities of places and subject-bodies, how will there be any union of them one to another?"

One most excellent solution of all these and an infinite number of similar questions is by a survey of the manner in which the gods are allotted.

This, then, is the explanation: Whether the allotment be to certain parts of the universe,

as to heaven or earth, whether to holy cities and regions, whether to certain temple-precincts or sacred images, the divine irradiation shines upon them all from the outside, just as the sun illuminates every object from without with his rays. Hence, as the light encompasses the objects that it illuminates, so also the power of the gods comprehends from without those that participate of it. In like manner, also, as the light of the sun is present in the air without being combined with it – and it is evident that there is nothing left in the air when the illuminating agent is removed, although warmth is still present when the heating has entirely ceased – so also the light of the gods shines while entirely separate from the objects illuminated, and, being firmly established in itself, makes its way through all existing things.

Still further, the light that is the object of perception is one, continuous, and everywhere the same entirety; so that it is not possible for a part of it to be cut off by itself, or to be enclosed in a circle, or at any time to remove itself from the source of illumination. According to the same principles, therefore, the whole universe, being susceptible of division, is distinguished with reference to the one and indivisible light of the gods. In short, this light is one and the same everywhere, and is not only present, undivided, with all things that are capable of participating of it, but it, likewise, by an absolute power and by an infinite superiority, fills all things, as a cause, joins them together in itself, unites them everywhere with itself, and combines the ends with the beginnings. The whole heaven, including with it the universe imitating this, goes around in a circular revolution, unites all to itself, and leads the elements whirling in a circle; and all things being in one another, and borne toward one another, it holds them together and defines their equal proportions; and guiding them to the remotest distances, makes the ends combine with the beginnings – as, for example, the earth with the sky – and effects a sole connection and accord of wholes with wholes.

Who, then, that contemplates the visible image of the gods thus united as one ⁷ will not have too much reverence for the gods, its causes, to entertain a different judgment and to introduce among them artificial divisions, arbitrary distinctions, and corporeal outlines? I, for one, do not think that any one would be so disposed. For if there is neither any analogy, nor scheme of proportion, nor interblending in respect to power or simple energy of that which is set in order with that which sets in order, ⁸ then I say that there is nothing existing in it, either of extension or in regard to distance, or of encompassing locally, or of division by due setting apart, or of any other such natural equalizing of qualities in the presence of the gods with beings inferior in their nature. For in natures that are homogeneous in essence and power, or that are in some manner of similar form or alike in race, there can be perceived an encompassing or holding fast. But in the case of those that are totally exempt from all these conditions, what opposing circumstance in respect to these things, or pathways through them all, or separate outline, or encompassing in some prescribed space, or anything of this kind, can be justly conceived? On the other hand, I think that they who are partakers of the gods ⁹ are, every one, of such a nature as to partake of them according to their own intrinsic quality, some as of the other, others as of the atmosphere, and others as of the water; which the technique of the Divine Performances recognizes, ¹⁰ and so makes use of the adaptations and invocations according to such a classification.

So much may be stated in regard to the distribution of the superior races in the world.
SUPERIOR BEINGS NOT CLASSIFIED AS PASSIVE AND IMPASSIBLE

After these distinctions thou suggestest another classification on thy own account, and separatest the essences of the superior races by the differentiation of "passive and impassible." I do not, however, by any means accept this classification. For no one of the superior races is passive, nor yet is it impassible in such a manner as to be thus contradistinguished from any that is susceptible, as being adapted by nature to receive impressions, or as freed from them through inherent virtue or some other excellent condition. On the other hand, it is on this account, because they are entirely exempt from the inconsistency of being either passive or not passive, because they are in no way susceptible to impression, and because they are unchangeably fixed in regard to essence, that I set them down in all these respects as impassive and unchangeable.

Consider, if thou art willing, the last one of the divine races, the soul pure from the defilement of bodies. Being superior to the realm of nature, and living the unbegotten life, what does it want of the generated life with sensual pleasure and of the restoration thereby into the realm of nature? ¹¹ Being outside of everything corporeal, and of the nature which is divisible in respect to the body, and being likewise entirely separate from the accord in the Soul which goes down into the body, why is it to participate of the pain that leads to decay and dissolution of the structure of the body? On the contrary, it has no occasion for the susceptibilities which are forerunners of sensation, for it is neither held at all in a body nor in any way environed by it so as to have occasion for bodily organs in order to perceive different bodies outside of these organs. In short, however, being indivisible, remaining in the one same form, being essentially incorporeal, and having nothing in common with the generating and susceptible body, it can be affected by nothing in regard to classification or transformation, nor in short has it any concern whatever with change or condition.

But on the other hand, whenever the soul comes into the body it is not itself, nor are the rational faculties which it imparts to the body susceptible to impression. ¹² For these are simple and single ideals, not admitting any disturbing element or entrancement, so far as relates to them. It is, therefore, the something that yet remains that is the cause of such experience to the composite nature. Nevertheless, the cause is not in any way the same as the effect. ¹³ Hence, the Soul being the first genesis and origin of the composite living beings that come into existence and pass to dissolution, is itself, so far as relates to itself, unbegotten and imperishable; so also those that participate of the soul are susceptible to impression and do not possess life and essence in their completeness, but are entangled in the indefiniteness and alien conditions of the realm of matter. ¹⁴ Yet the soul, as relates to itself, is unchangeable, as being in its own essence superior to impression, and as neither being moved by any preference inclining in both directions (passiveness and impassibility), nor as receiving an acquired versatility in the participating of habitude and power.

Since, therefore, we have shown, in respect to the last race of the superior orders, namely, the soul, that it is impossible for it to participate in any passive or

impressionable condition, how is it proper to attribute this participation to demons and half-gods who are sempiternal and follow the gods, and themselves according to their respective grades preserve, and likewise in their several places make the regular arrangement of the divine beings always complete, and do not leave any unoccupied space between the different orders? For this we know for certain: that the passive condition is not only undisciplined but also discordant and unstable, never being in any case its own master, but attached to that by which it is held fast and to which it is subservient in reference to the sphere of generated existence. This condition of passiveness, therefore, pertains to some other race rather than to one always existing and allied to the gods, not only maintaining the same arrangement but likewise going around the same circuit with them. Hence, therefore, the demons, and all who rank with them after the superior races, are impassible.

Notes:

Chapter 3. The Superior Races¹. The Chaldaean Oracles also recognize this twofold mind. The one, the Pure Reason or Intelligence, was placed over the first Triad. "The Mind of the Father named all things in threes, and governed them all by Mind." This mind they considered as sole, unparticipating, and essential. The other was described as participant and divisible into parts or qualities.

Chapter 3. The Superior Races². The Prytanis of Athens were fifty in number, and were selected from the Boulé or Senate. Sokrates, at the age of sixty, was chosen to that dignity.

Chapter 3. The Superior Races³. The Chaldaean Theology did not unequivocally describe all the gods as "unbound." The seven cosmokrators, or rulers of the world, the lords of the zodiacal houses and the cosmic gods assigned to regions of the world, were bound to their respective jurisdictions.

Chapter 3. The Superior Races⁴. The pre-existence of the soul in the eternal world, before becoming involved in the genesis and conditions of the earth-life, was generally believed. Even after being set free at death, it was supposed to be, after a period of less or greater length, again attracted back to the mundane sphere. Plato illustrates this by the Vision of Eros in the Republic. The choice of the earthly condition is made by the soul itself, and very generally it differs from what it had been in the preceding term of life in the world. "The cause is in him who makes the choice, and the divinity is without blame in the matter." Eros adds that after the souls had chosen their new lives according as they drew the lots, they all went in their order to Lachesis, and she gave to every one the demon that he had chosen, and sent the demon along with him to be the guardian genius of his life, and the accomplisher of the fate which he had chosen. Then he was born anew into the earth.

Chapter 3. The Superior Races⁵. The cause or incentive for the coming of the soul into generated life is variously explained by different writers. According to Plotinus, the universal soul does not come to a body as the body may come to it, nor does the body contain the soul, but is contained by it. Simplicios accepted the statement of Iamblichos,

that “the soul projects certain lives for itself.”

Chapter 3. The Superior Races⁶. The stars and planets were regarded as abodes or receptacles of souls.

Chapter 3. The Superior Races⁷. Plato affirms this in the *Epinomis*. “It is Heaven that we should honor,” says he; “it is the cause of all benefits to us.” Abammon, doubtless, alludes to Ra, of the Egyptian Pantheon, who was regarded as the source of light, and also as being the whole heaven united as one eikon and personality.

Chapter 3. The Superior Races⁸. Proklos reiterates this declaration, so often insisted upon, that the superior nature and essence can receive nothing from one that is inferior.

Chapter 3. The Superior Races⁹. Intelligent readers will understand from what has been said, that as the gods are spiritual essences, the partaking of them, or, in other words, of their irradiation, is analogous to the partaking of light. The luminance itself is in no way affected, but the partaker is filled and pervaded by it.

Chapter 3. The Superior Races¹⁰. This is the Theurgic Rite. “This Theurgy,” says Thomas Taylor, “is, doubtless, the same as the ‘Magic of Zoroaster,’ which was no ‘Black art,’ but a peculiar mode of worship.”

Chapter 3. The Superior Races¹¹. The soul was called by Damaskios, our last echo of Divinity. In the mundane region it was considered as not a whole and united essence, but as divided into qualities and traits of character.

Chapter 3. The Superior Races¹². Plotinus, using the comparison that the workman does not contract the imperfections of his tools, remarks that it is not necessary that the soul shall be itself affected by the conditions of the body. It simply uses the body as its instrument: It is incorporeal, and hence the passions and susceptibilities of the body do not penetrate into its substance, but only into its powers and energies.

Chapter 3. The Superior Races¹³. Proklos illustrates this by the analogy of a man viewing his own image in a stream of water. He is unchanged in his own person and individuality, but the image exhibits great perturbation. So the soul contemplates its own image as reflected in the body, and though it is itself impassible and unaffected, it may be perplexed by the incidental disturbances.

Chapter 3. The Superior Races¹⁴. Greek, *ulgo*, wood, rubbish; the negative or inert quality called matter, from which natural objects proceed. Aristotle first adopted the term. Plato, unable to conceive of matter as substance *per se*, made use of terms signifying the “nurse” and the “receptacle” or passive force. The term “matter” is from *materia*, the mother-principle. The phrase “realm of matter” is adopted here, as the term implies a department in the universe, and not simply matter itself.

Chapter 4. Rites, Symbols, and Offerings
Theurgia or The Egyptian Mysteries By Iamblichos

“Why then, are many ceremonies performed histrionically in the Sacred Rites, as though the gods were moved by passion?”

I think that this is said without an intelligent understanding in regard to the Sacerdotal technique of the Mysteries. For of the ceremonies performed from time to time in the Sacred Rites, some have an ineffable cause and a divine principle; others are consecrated to the Superior beings from eternity as symbols are consecrated ¹; others preserve some other image, just as Nature, the Supreme Genetrix also from invisible concepts, molds visible semblances. Others are brought forward from some motive of veneration, ² or they are endeavors at figurative representation, or some concept of a family relationship. Some prepare us for something that is useful, or in some way purify and free our human passions, or turn away some of the evils that may be impending over us. Yet it may not be admitted that any part of the Holy Observance is performed to the gods or demons as to impressionable beings. For the essence which is subjectively everlasting and incorporeal is not of a nature to permit any change from the bodies (offered at the Rites. ³)

Not even though it be admitted that it has use especially of such a kind, would it ever need it from human beings in a religious service of this kind. It is supplied from itself, and from the nature (or feminine principle) of the world, and from the abundance which is in the genesis (or generative energy); and if it is permissible to say this likewise, it receives a sufficiency before it can be in any want, through the unfailing complete supply of the world and its own ample abundance, and because all the superior races are fully supplied with the good things pertaining to them respectively. Let there be, therefore, this general encouragement for us in regard to the worship of the uncontaminate races, that they are likewise affiliated by kindred relationship to the beings that are otherwise superior to us, and on this account the pure are attracted to the pure, and the impassive to the impassive.

Following every point in its turn, we remark that the planting of “phallic images” is a special representing of the procreative power by conventional symbols, and that we regard this practice as an invocation to the generative energy of the universe. On this account many of these images are consecrated in the spring, when all the world is receiving from the gods the prolific force of the whole creation. ⁴

I think, however, that the immodest language to which you refer, affords an illustration of the absence of moral virtues ⁵ in the realm of matter, and the unseemly

rudeness existing beforehand with the unformed elements that are to be organized. These being utterly destitute of orderly arrangement, are passionately eager for it, so to speak, to such a degree as they are conscious of the unbecoming condition of things around themselves. Hence, again, perceiving from the speaking of vile utterances, what is vile, they follow to the (divine) sources of the ideals and more beauties.

They accordingly not only turn aside from evil action, but through the words, it is manifest in its forms and changes the impulse to a contrary direction. ⁶

There is, however, still another reason of analogous character for these customs. The powers of the human passions that are in us, when they are barred on every side, become more vehement: but when they are brought into activity with moderation and reasonable measure, they are sufficiently delighted and satisfied, and becoming pure in consequence, are won over and set at rest. In the same way, likewise, in comedy and tragedy, when we behold the emotions of others, we repress our own, make them more moderate and are purified from them. In the Sacred Rites, also, we are, by certain spectacles and relations of ugly things, delivered from the harm that is likely to befall through the events represented by them. ⁷

Things of this character are brought into use, therefore, for the healing of the soul within us, the moderating of the evils which have become nature to it through the genesis ⁸ or nativity, and likewise for the sake of its unloosing and deliverance from its bonds. On this account, probably, Herakleitos names them "Remedies" ⁹ as being cures for terrible maladies, and restoring the souls sound from the experiences incident in the generated life.

WHAT THE INVOCATIONS ACCOMPLISH

But the objection is also made: "The invocations are made as to gods that are impressionable beings; so that it is implied that not the demons only are impressionable, but the gods likewise."

This, however, is not as thou hast supposed. For the illumination which is present through the invocations is self-appearing and self-subsisting; it is also far removed from the being attracted downward, and goes forth into manifestation through the divine energy and perfection, and it excels voluntary choice and activity by so far as the Divine Purpose of the Absolute Goodness is superior to the deliberately chosen of life. By such a purpose, therefore, the gods being gracious and propitious, give forth light abundantly to the Theurgists, both calling their souls upward into themselves, providing for them union to themselves in the Chorus, ¹⁰ and accustoming them, while they are still in the body, to hold themselves aloof from corporeal things, and likewise to be led up to their own eternal and noetic First Cause. ¹¹

From these Performances ¹² it is plain, that what we are now discoursing about is the Safe Return of the Soul, for while contemplating the Blessed Spectacles, ¹³ the soul reciprocates another life, is linked with another energy, and rightly viewing the matter, it seems to be not even a human, for the most blessed

energy of the gods. If, indeed, the upward way through the invocations effects for the priests a purifying of the passions, a release from the condition of generated life, and likewise a union to the Divine First Cause, why, indeed, does any one impute to it any of the passion? ¹⁴ For such invocation does not draw down beings that are impassive and pure, to that which is susceptible and impure. On the contrary, it makes us who had become impressionable through the generated life, pure and steadfast. ¹⁵

On the other hand, even the “favorable inclinations” do not bring the priests into union with the gods through a passive condition, but they open the way for an indissoluble communion through the attraction which binds the universe together. It is by no means, as the term seems to imply, an inclining of the mind of the gods to human beings, but on the contrary, as the truth itself will teach the adapting of the human intelligence to the participating of the gods, leading it upward to them, and bringing it into accord through persuasive harmonies. Hence, both the reverend names of the gods, and the other divine symbols, being of an elevating tendency, are able to connect the invocation with the gods. ¹⁶

Proklos also declares that “the gods are readily persuaded by invocations and enable the initiants to behold perfect, tranquil, and genuine spectacles.”
PROPITIATORY RITES

What is more, “the propitiations of anger” will be plain enough if we learn thoroughly what the anger of the gods really is. It certainly is not, as some imagine, an inveterate and persistent rage. On the contrary, so far as the matter relates to the gods, it is a turning away from their beneficent guardianship. We ourselves turn away from this just as we bring darkness upon ourselves by shutting away the light at noon-day and so rob ourselves of the priceless gift of the gods. Hence the “propitiation” can turn us to the participation of the superior nature, ¹⁷ lead us to the guardian fellowship of the gods, which we had cast from us, and bind to each other harmoniously both those participating and the essences participated. Hence so far is it from accomplishing its particular work through a passive condition, that it leads us to desist from any passionate and disorderly turning away from, the gods.

Nevertheless, because evil is present in the regions of the earth, ¹⁸ the “expiatory sacrifices” act as a remedy and prepare us so that no change or any passive condition may occur with reference to us. Hence, whether it is through the gods or demons that a result of this kind takes place, it appeals to them as helpers, averters of evil, and as saviors, and through them turns away every harm that may be liable to follow from what has occurred. Let it be understood that those superior powers that turn away the blows incident to the realm of nativity and nature, are not preventing them in any way through passive conditions.

Indeed, if anyone has imagined that the intercepting of the protecting influence may bring on some chance injury, the endeavor at persuading of the Superior races “through the expiatory sacrifices” recalling them to their generosity, and taking away the sense of privation, may be in every respect pure and unchangeable. ¹⁹

"THE NECESSITIES OF THE GODS"

Further still, we will consider what are called "the necessities of the gods." The whole fact is this: The "necessities" are peculiarities of the gods, and exist as pertaining to gods, not indeed as from without, nor as from compulsion; but, on the contrary, as the goodness is of use from necessity, so also are they likewise in every particular and they are not in any respect otherwise inclined. Such necessity is itself combined with a purpose ideally good and is the beloved consort of Love. ²⁰

It is not only the same and unalterable in the order pertaining to the gods, but because it is at the same time, and in like manner, circumscribed in one boundary, it abides in this and never goes out of it. For all these reasons the very contrary takes place to what was inferred. If in Theurgy there are really genuine powers of such a character as we have set forth, the conclusion is inevitable that the Divine Being is proof against enchantment, impassive and not to be compelled.

SUPPLICATIONS AND THEIR UTILITY

Nevertheless, after this, thou passest over to another classification of gods as contrasted with demons. For thou remarkest that "gods are pure mental essences," proposing the opinion as the basis of an argument, or telling it as acceptable to certain individuals. Then thou addest: "that the demons are psychic beings, participating of mind."

It is not hidden from me that these notions are entertained by many of the Grecian philosophers. ²¹ nevertheless, I do not think it proper to hide from thee the manifest truth, for all opinions of such a character are somewhat confusing. They carry the attention from demons to souls, for these are also partakers of mind; and they wander from the gods to mind that is non-material in respect to operation which the gods excel in every particular. Why, then, should we attribute these peculiarities to them, which are by no means exclusively theirs? This much will be sufficient in regard to this classification. Otherwise, so far as it may be thought worthy of a mention of such a kind, it is overmuch. But in regard to the matters of which thou art in doubt, they should have due attention inasmuch as they have to do with the sacerdotal function.

Having further affirmed that "pure mental essences are not to be charmed or mingled with things of sense," thou doubtest whether it is necessary to pray to them. On my part, I do not think it necessary to pray to any others. For that something in us that is divine, mental essence and one – or mental alone, if you choose to call it so – is then vividly aroused in the prayers, and when it is awakened it longs vehemently for its counterpart, and becomes united to the absolute perfection.

If, however, it appears incredible to thee that an incorporeal being hears a voice in any way, and there is need of a special sense and of ears in order that the things uttered by us in the prayers may be heard, thou art voluntarily forgetful of the superior powers of the Primary Cause, both in the perceiving of all things, and the encompassing of them at once in themselves. The gods certainly do not receive the prayers in themselves through faculties of sense, or through organs, but they encompass in themselves the full

purport and energies of the pious utterances, and especially of those which happen through the Sacred Rites to have been established and brought into one with the gods. For then the Divine essence itself is simply present to itself, and does not share the conceptions in the prayers as distinct from itself.

But thou affirmest that “the supplications which are offered are entirely foreign to the purity of mental substances.” Not at all: for it is on this very account, because we are excelled by the gods in power, purity, and everything, that it is most opportune to supplicate them even with exaggeration of speech. If we are judged by being compared to the gods, the consciousness of our own nothingness causes us to betake ourselves to supplication, and we are led from supplication to the object of supplication, and from the familiar intercourse we acquire a similarity to it, ²² and from imperfection we quietly receive the Divine Perfection. ²³

If, however, it is conceived that the sacerdotal supplications are inspired into human beings as from the gods themselves, that they are symbols or tokens of the very gods, and are recognized by the gods alone, and have likewise after a certain manner the same power with the gods, how may it be justly supposed that supplication of this kind is still a matter of the physical senses, but not divine and of the higher intelligence? Or, what may in any likelihood insinuate itself into it when the most excellent human morals cannot be easily made pure? ²⁴

“But,” it is remarked by thee, “the things that are offered are offered as to sensitive and psychic natures.” If, indeed, they consisted of corporeal and composite powers alone, or of such as pertained merely to the service of the physical organism, thou wouldst be correct. But since the offerings partake also of incorporeal ideals, special discourses, and simpler metres, the peculiar affinity of the offerings is to be considered from this point alone. And if any kindred relationship, near or far away, or any resemblance is present, it is sufficient for the union about which we are now discoursing. For there is not anything which is in the least degree akin to the gods, with which the gods are not immediately present and conjoined. It is not, then, as to “sensitive or psychic,” but actually to divine ideals and to the gods themselves, that the intimate union is effected so far as may be. Hence we have spoken sufficiently in opposition to this classification. CLASSIFICATION CRITICISED

The next thing in thy letter is the question, “Are gods separated from demons by the distinction of bodied and unbodied?” ²⁵

This distinction is much more common than the former one; but it is so far from indicating their peculiarities of essence, that it does not even constitute a reasonable guess in respect to them, or anything incident to them. For it is not possible from these things to apprehend intelligently whether they are living beings or beings without life, and whether they are deprived of life or do not need it at all. Besides, also, it is not easy to form a judgment as to how these terms are to be applied, whether in Common or in relation to many different things. If they are to be applied in common, if both a piece of writing and a period of time, a god and demons likewise, and also fire and water, are under the same class as being incorporeal, the distinction is absurd. If, however, they

are employed with reference to the chief differences, why, when thou speakest of incorporeal things, dost thou indicate gods rather than tokens; or when thou sayest "body" why should it not be taken to mean the Earth rather than demons? For this point is not itself defined, whether they have bodies as a part of themselves, or are carried by bodies as a vehicle, or make use of them on occasion, or encompass them, or are merely identical with the body.

Perhaps, however, it is not necessary to scrutinize this distinction critically; for thou dost not put it forward as thy own concept, but on the contrary, displayest it as the conjecture of others.

THE GODS OF THE SKY NOT CORPOREAL

We will, therefore, take up in place of this subject, the matter in relation to the present opinion, about which thou seemest to be in doubt. For thou hast proposed this question: "If only the gods are incorporeal, how shall the Sun, the Moon, and the luminaries visible in the sky, be accounted as gods?"

We reply: That they are not encompassed by the bodies, but that on the contrary, they encompass the bodies with their own divine lives and energies; also that they are not converted to the body, but possess the body which has been converted to the divine cause; and that the body does not interfere with their spiritual and incorporeal completeness, nor occasion any obstacle to it by intervening. hence it does not even require more attention, but follows (the divinities) after a manner spontaneously, and by its own motion, not needing a self-operating superintendence, but urging on by itself ²⁶ uniformly by the leading of the gods upward toward the One. ²⁷

If, however, it is necessary, we will say this: The body (of the divine guardian of the star) in the sky is very closely akin to the incorporeal essence of the gods. For the essence being one, the other is unique; that being undifferentiable this is undivided; that being unchangeable this is in like manner unchanged. ²⁸ But if even it is taken for granted the energies of the gods are after one ideal, the divine one in the sky has also a single orbit. Nevertheless it also imitates their sameness in respect or a perpetual activity constantly in the same manner, by the same impulses, according to one law and one order of arrangement; and also the life of the gods which is the life natural to the bodies in the aether. Hence, their body is not constituted of incongruous and different elements in the way that our body is composed; nor does their soul join with the body to bring out from two, one living being. On the contrary, the living forms of the gods in the sky are, in every respect, similar and united, and are likewise complete, uniform and uncompounded through their entire substance. For the superior divinities are always excelling in these respects, and the lesser ones being dependent upon the rule of those that are prior and never obtaining this rule for themselves, the whole are brought into one joint arrangement and one common activity, and are all of them, in a manner, incorporeal and wholly divine. Hence, wherefore the divine ideal predominates in them, and implants through them all everywhere, the same One universal essence.

So, therefore, the gods that are visible in the sky, are likewise all of them in a certain

sense, incorporeal.

THE GODS IN THE SKY NOT MALIGNANT

Thy next question raises a difficulty in another form "How is it that some of these gods are givers of good and others bring evil?"

This conjecture is taken from the casters of nativities, but it falls short of actual fact in every particular. For they all are not only good, but in like manner, also the causes and authors of benefits, and they likewise all revolve (in their orbits) with reference simply to the One God, according to the beautiful and good alone. Nevertheless the bodies which are subject to them, ²⁹ themselves possess extraordinary powers; some of these powers being firmly established in the divine bodies themselves; but others going forth from them into the productive principle of the world, even into the world itself, and likewise passing down in proper order through the whole realm of generation, ³⁰ and extending without impediant even to incomplete races.

In respect, therefore, to the powers which inhere in the bodies of the divine ones in the sky, there is no doubt that they are all similar. Hence it is left for us that we shall discourse upon those which have been sent down here, and which have become intermingled with the sphere of generated existence. They extend in the same way preservation of the universe, and encompass the whole realm of generated existence after the same manner. They are both impassive and unchangeable, although they are present in the changeable and passive. The realm of generated existence being of many kinds and constituted of things diverse in character, contends against the oneness and indivisible essence of the gods with its own contrary and factious nature, discordantly and factiously. But it admits the impassive essence after the passive manner; and in short it participates of them according to its peculiar nature and not according to their power. As, therefore, that which comes into existence partakes of real being, as by heredity, and the body receives the incorporeal essence after a corporeal manner, so likewise the natural and material bodies in the realm of generated existence, it may be, participate in a disorderly and discordant manner of the non-material and ætherial bodies, which are above the realms of nature and generated existence. They are absurd, therefore, who attribute color, figure and the sense of feeling to mental forms, because those that participate of them are of such a kind; and so are they also who impute malignity to the bodies in the sky because their participants are sometimes bad. For unless the one who is participating had some such aberration at the beginning, there would be no such communication. But if that which is imparted is received as being foreign and inimical, it may, perhaps, become as something different, and to those belonging about the earth, it is evil and disorderly. This participation, therefore, and the commingling of aura of the realm of matter with that of the non-material realm, becomes a cause of much essential diversity in the inferior races; and besides these, that which is given forth in one way, is received after another. Thus, for example, the aura of Kronos (Seb) is dense, but that of Arês (Mandu) is impulsive; ³¹ yet the passive generative receptacle in those belonging in the realm of matter receives the former according to its consolidation and coolness, but the latter according to the warmth beyond the usual condition. Hence do not corrupting influence and the disproportionateness come through the deviation of the recipients, which is productive

of inharmoniousness, pertaining to the realm of matter and impressionable? Hence the feebleness. incident to regions in the realm of matter and earthly existence, not being capable of the genuine power and absolutely pure life of the divine ones of the ætherial region, refers its own condition to the Primary Causes – just as though a person distempered in body and not able to endure the life-giving warmth of the Sun, should have the audacity to affirm from his own condition, the falsehood that the Sun is of no benefit to health or life.

Something of this kind, however, may be the case in the general order and constitution of the universe, as the same things may be the means of safety to the universe and to every one, through the completeness, both of the things that are possible and those by which they are possible, but are harmful to the imperfect through their specific lack of harmony. Likewise in the motion of the universe, the revolutions in like manner maintain order in every respect, but some one of the parts is injured now and then by another, as we see occurring in a dance. ³²

To repeat the statement once more, it is the natural tendency of partial and incomplete things to decompose and undergo change. It is not proper, however, to attribute this peculiarity to the universal and primary causes, either as being inherent in them or as extending from them into this lower region.

Hence, from considerations of such a nature, it is demonstrated that neither the gods (of the planets) in the sky themselves, nor their gifts, bring evil.

THE GODS HAVE ONE COMMON ESSENCE

Come, then, let us dispose of that question also: “What is the bond of union that connects the divinities in the sky, that have bodies, with the gods that are unbodied?”

This also is clear from what has been said already. For though as being incorporeal, intelligent and united, they ride upon the celestial spheres, they have their origins in the realm of mind, ³³ and comprehending their essential being as divine, they govern the whole sky by one infinite energy, and although present in the sky as existing separately, they conduct the perpetual revolutions by their solitary wills, and are themselves unmingled with sensation and coexist with the god of the realm of Mind.

It is proper, nevertheless, to examine the present question thoroughly. I state the proposition accordingly, that the images of the gods which are visible (in the sky) are from the divine models in the realm of Mind, and are engendered around them; ³⁴ and having come into existence they are established in these absolutely, ³⁵ and being extended to them, they have the likeness which has been produced from them. They are likewise wrought into another arrangement after a different manner. They are held here in connection with those models in one stable union, and the divine spiritual forms, which are present with the visible bodies of the gods, exist separately before them, but their noetic models unmingled and super-celestial remain permanently by themselves, all as one in their everlasting exaltation.

There is, therefore, the common indissoluble bond with reference to spiritual energies, but there is one also in the common participations of forms, since nothing separates these, and there is nothing intervening between them. Besides, the non-material and incorporeal essence, being neither parted by spaces nor by subject-bodies, nor marked off by delineations into separate parts, comes together at once, and coalesces into an absolute identity. The issuing forth of all from the One, the returning again into the One, and the absolute rule of the One in everything effect the communion of the gods themselves in the Cosmic world, with those that pre-exist in the realm of Mind.

Moreover, the conversion of the secondary to the superior spiritual beings and the bestowing of the same essence and power from the primary to the secondary gods, holds their association indissoluble in one. In regard to things of another quality, as for example, soul and body, and those of unlike kinds, such as material forms, and also of substances which are in some other way separated from each other, the natural union, which exists between them both, originates from the Powers above and is cast off in consequence of the limited periods of time. However far we may ascend in regard to the height and the unchangeable sameness of the divinities, who are first as to form and essence, and raise ourselves from imperfect beings to perfect, by this much the more do we find the union which is sempiternal, and likewise behold the self which is principle and dominant, ³⁶ possessing diversity and multitude around itself and in itself.

Inasmuch as the gods are all arranged as absolutely one, the primary and secondary races, even the many that are self-existent with them, preside together over the universe as one, everything in them is one, and the first, the intermediate and lowest races coexist as the One itself. Hence, in respect to these, it is of no use to enquire whence the One is brought into reciprocal relations with them all, for the self-same essence that is indeed in them is the one of their own substance. ³⁷ The secondary races not only remain together in the unity of the primary divinities, but the primary gods bestow upon the secondary races the oneness from themselves, and they all maintain the common bond of an indissoluble relationship to one another.

From the same cause, moreover, the gods that are entirely incorporeal are united with the gods (in the sky) that have bodies and are perceptible to the senses. For the gods that are visible are really outside of bodies, and therefore are in the world of Mind; and those of the world of Mind, through their unconditioned unity, encompass the visible divinities within their own substance, and both are established by a common union and a single energy. In like manner, also, this is characteristic of the cause and arrangement of the gods, and for this reason this very oneness of them all extends from above to the very last in the order of divine beings. Suppose, however, that this seems to be a statement to be doubted, the contrary supposition, that there is nothing of the kind, would be matter of wonderment.

So much may be declared in regard to the bond which unites the gods, that are established in a manner perceptible to the senses, with the gods of the world of Mind.

OTHER MODES OF DISTINGUISHING

After this, however, thou takest up again the very questions in regard to which the things which have been stated already will suffice amply for a solution. Since, however, as the saying is, it is necessary to tell and examine often the things which are beautiful, we will not pass these matters by as having received sufficient answer, but by pounding away repeatedly with arguments we may perhaps get out of them all some complete and important benefit in true knowledge. For thou art still in doubt, as the question shows: "The gods that are visible (in the sky) being included in the same category with the invisible, what distinguishes the demons from the visible, and likewise the invisible gods?"

Beginning at this starting point, I will set forth the difference. It is because the gods in the sky are united with the gods in the world of Mind, and have the same idea or principle of existence with them; but the demons are far distant from them in essence, and scarcely compare with them in any resemblance. On this account they are distinct from the visible divinities, while they differ from the invisible gods in regard to the difference of their peculiar invisibility. For the demons are indeed imperceptible to sight, and in no way to be apprehended by a sense; but the gods are beyond the scope of the knowledge and perception incident to the realm of matter. Because they are in these respects unknowable and invisible, they are so named, or it may be in a sense very different in respect to the demons that they are described as invisible. What, then, do the invisible gods have, so far as they are invisible, which is superior to the gods that are seen in the sky? Nothing at all. For the divine quality, whatever it may be, and whatever allotment it may have, possesses the same power and dominion over all subordinate things. Even if they were visible they would not be subordinate to the invisible daemons, and though they were to belong to the Earth, they would reign over the demons of the air. For neither the place nor the part of the world that may receive it, makes any change in the Supreme authority of the gods; but the entire essence of the gods, indivisible and unchangeable, which all the inferior races in the order of nature revere in like manner, remains everywhere the same.

Setting out from the same point of beginning, we also find another difference between them. For the visible and invisible gods concentrate in themselves the whole government of existing affairs, both in regard to the sky and world, and in relation to the entire invisible forces of the universe. But those that are allotted to authority among the demons, extending it over certain prescribed regions of the world, govern these, and themselves likewise have an incomplete form of essence and power. They are even in some manner akin and inseparable from those that are governed by them.

The gods, however, even those that go upon bodies as their vehicles, are separated and diverse from these in all respects. Hence the supervising of the bodies brings no specific lessening of rank to those to whom the body is subject; it is encompassed by the superior essence, and is turned back to it, and is no obstacle to it. But on the other hand, the close affiliation to the generative nature and the imperfection ensuing by it, give the demons necessarily an inferior destiny. In short, the divine race is predominant and takes precedence in the general arrangement among existing things; but the demonian order is ministrant, receiving whatever directions the gods may give, and responding promptly by own effort, in regard to whatever the gods contemplate, will and

command.

Hence the gods are freed from the forces which incline downward to the realm of generated existence, but the demons are not wholly purified from these.

So much, therefore, we have subjoined in regard to this solution of the problem, and we think that from the former and the present arguments the matter will become better known.

CLASSIFICATION REJECTED

For the reasons which we have before stated, the classification of passive and impassive which thou makest, should be rejected as not being suitable for any of the superior races, on account of the causes which we formerly mentioned. Indeed it deserves to be overturned, because it argues from the Sacred Dramas that “they are impression able.” What Holy Rite, and what act of worship performed according to the Sacerdotal Regulations, is accomplished through a passive condition, or effects any satisfying of passive conditions? Was it not ordained from the beginning, according to the ordinances ³⁸ of the gods and likewise intelligently? The Rite both copies the order of the gods, both that of the gods of the world of Mind and that of the gods in the sky, and contains the eternal metres of things that are, and wonderful spectacles which were sent down from the Creator (Demiurgus) and Father of All, by which also the things of Silence are represented by arcane symbols, the things without form are held firmly in forms, the things which are superior to any likeness are represented unshapen, and everything is accomplished by a sole Divine Cause, which is so far remote from passive conditions that no reasoning faculty can reach to it.

This fact, therefore, I suppose, becomes the cause why many turn away to the multitude of projects. For men who are unable to acquire the deeper knowledge of the reasonings themselves, yet who imagine themselves able, are entirely carried away by their own peculiar human emotions, and form their judgment of matters relating to the gods from things incident to themselves. Hence they err in two ways: because they fail of the true concept of divine things; and because when they miss these, they drag their notions of these down to the level of human emotions themselves. ³⁹ Nevertheless, it ought not to be supposed that the things which are performed alike to gods and human beings, – such as acts of homage, salutations, offerings, first-fruits, are to be regarded as after the same plan of action in both cases; but that each is established apart from the other with regard to the distinction of being more honorable – the one venerated as being for the gods and the other held in low esteem as relating to human concerns. Thus is given a completeness to passive conditions, both of those doing homage and those to whom it is rendered, for they are human and of a corporeal nature; but honor is to be bestowed unstintingly upon the operation of the others, as being performed through unchanging admiration and a reverent condition of mind, because they are rendered to the gods.

Notes:

Chapter 4. Rites, Symbols, and Offerings¹. Symbols constituted a prominent feature in

the ancient religious worship. They were undoubtedly to a large extent fetishes, there being a measure of the essence and operation of the deity supposed to exist in them. The Egyptian, and indeed the whole Oriental worship consisted of them, and even at the present time, there is no ritual that is without them. But then, human language is made up of symbols and representative sounds.

Chapter 4. Rites, Symbols, and Offerings². This is distinctly denied in Part V, Chapter VI.

Chapter 4. Rites, Symbols, and Offerings³. See Part V, Chapters II and IV.

Chapter 4. Rites, Symbols, and Offerings⁴. The custom here described was universal in ancient times, and it is still found in parts of India. Its remains also exist in architecture and ornamentation. In the worship of the Ashera and Venus of Eryx, and of the Great Mother in Syria and Western Asia, the observances were carried to greater extremes. King Asa of Judea is said to have deposed his mother, Maacha, from royal dignity for her participation – “because she made a phallos to an Ashera,” I Kings XV: XIII. It has been generally believed that the Festivals and Initiatory, or Perfective Rites, of the different countries, included the same feature, as indeed, is here admitted. It should be borne in mind, however, before any hasty judgment, that the different faiths had their two sides, like the right or the left, and that worshippers regarded them and took part in them according to their inherent disposition. Thus, in India, there are the Asceticsiva-worshippers, and the Saktas, to this day. In this way the Mysteries presented themes for the highest veneration, as well as phases that are esteemed as gross and lascivious. Every curious person, therefore, sees in them what he has eyes to see, and is often blind to the rest.

Chapter 4. Rites, Symbols, and Offerings⁵. Greek, kalwn from kalon, good, beauty, moral virtue, excellence. Mr. M. W. Hazeltine, in the New York Sun, remarks upon this apparent confounding of moral with physical beauty, which this word exhibits, that “the ancients had not that conception which forms the basis and aim of Æsthetics in our time. To a Greek, if a thing was beautiful it was good, and if it was good it was beautiful; that, at least, was the prevailing attitude of the Hellenic mind.”

Chapter 4. Rites, Symbols, and Offerings⁶. These opinions were anciently entertained, the universe itself being regarded not as a fabric but as a birth, a creation or genesis, and evolution. But the philosophers generally disapproved of the doleful rites and immodest speech. Plutarch enumerates the various practices, such as the eating of raw flesh, the days of fasting and mourning for the slain divinity, (Matthew XI, 16; Amos VIII, 10) and the uttering of filthy and unseemly language. He explains that they were “not in honor of the gods, but rather to avert, mollify and appease the wrath of evil demons.” The Emperor Julian, however, forbade the using of words that should not be spoken or heard.

Chapter 4. Rites, Symbols, and Offerings⁷. “This doctrine is so rational,” says Mr. Thomas Taylor, “that it can never be objected to by any but quacks in philosophy and religion. For as he is nothing more than a quack in medicine who endeavors to remove

a latent bodily disease before he has called it forth externally, and by this means diminished its fury, so he is nothing more than a pretender in philosophy, who attempts to remove the passions by violent repression, instead of moderate compliance and gentle persuasion.”

Chapter 4. Rites, Symbols, and Offerings⁸. By the genesis or generation, Plutarch explains Plato to mean “only that substance or underlying principle which is subject to change and motion, placed between the forming cause and the thing formed, transmitting hither those shapes and figures which have been contrived and modelled” in the eternal world. Hence it means more than mere procreating, it is no less than transition from eternity where the soul is native, into the region of time and space, where it is only a sojourner.

Chapter 4. Rites, Symbols, and Offerings⁹. The Library of Alexandria bore the inscription of “Remedies for the Soul.” A similar term is said to have been placed over the collection of Papyri in the “House of Seti” at Thebes, in Egypt.

Chapter 4. Rites, Symbols, and Offerings¹⁰. Plato describes this chorus in the Phaidros. “Divine beauty was then splendid to the view,” says he, “when we, in company with Zeus, and others with other gods, beheld together with the Blessed Chorus, the divine Spectacle and were initiated into the Perfective Rites, which are rightly called most happy. Being ourselves entire and unaffected by the evils which await us in the Aftertime, we took part in the Orgiac Drama, and having become both Mystics and Beholders (mystæ and epoptæ) we beheld in the pure light, apparitions that were complete, unique, calm, and felicitous – being ourselves pure from earthly contamination and not encompassed in this investiture which we now call 'Body' and by which we are carried about, fastened like an oyster to his shell.”

Chapter 4. Rites, Symbols, and Offerings¹¹. Sokrates in his last discourse remarks that “While we live we shall approach nearest to the superior knowledge if we hold no partnership with the body, except what absolute necessity requires, and do not permit ourselves to be tainted by its nature, but keep ourselves uncontaminated by it till God himself shall release us.” This is what a later poet has portrayed as living above while in the world.

Chapter 4. Rites, Symbols, and Offerings¹². The dramas or performances of the Mystic or Theurgic Rites and their ulterior significance are here denoted – the experiences of the Soul and its return to the Eternal World, as it enters into the conditions of worldly existence. The Egyptian “Book of the Dead” treats of the same matters.

Chapter 4. Rites, Symbols, and Offerings¹³. The histrionic scenes and ceremonies which were exhibited to the Beholders of the Rites.

Chapter 4. Rites, Symbols, and Offerings¹⁴. The Chaldaean Oracles reiterate this sentiment.

“The soul of articulate-speaking men will in some way bring God into itself.
“holding fellowship with nothing mortal, it is all intoxicated with God.”

Chapter 4. Rites, Symbols, and Offerings¹⁵. This is explained by the hierophant in Moore's romance, *The Epicurean*. The aim of the initiation and "blessed spectacle" is thus set forth; "to retrieve the ruin of the blessed soul, to clear away from around her the clouds of earth, and, restoring her lost wings, facilitate her return to Heaven – such is the great task of our religion, and such the triumph of those Divine Mysteries, in whose inmost depths the life and essence of our holy religion is treasured."

Chapter 4. Rites, Symbols, and Offerings¹⁶. The names of the gods in the ancient Skythic and Euphratean languages were believed to possess some inherent virtue as well as charm. Hence the Oracle gives the injunction:
"Never change the barbarous names;
For among them are terms God-given,
That have ineffable virtue in Sacred Rites."

Chapter 4. Rites, Symbols, and Offerings¹⁷. Epistle of Peter II, 1, 4, "That by these ye might be partakers or communicants of the divine nature."

Chapter 4. Rites, Symbols, and Offerings¹⁸. Plato: *Theætetos*. "It is necessary that there should be always something opposed to God; and it cannot be seated among the gods, but of necessity hovers around this mortal nature and this region of earth."

Chapter 4. Rites, Symbols, and Offerings¹⁹. It was held that the vital emanation from the blood of the sacrificed animals was invigorating to spiritual beings (*Odyssey*, Book XI). But Plutarch is severe about it. He affirms that the murderous and lascivious customs at the festivals only served "to avert and appease the malice of certain evil spirits, or to satisfy the violent and raging lusts of some that either could not, or would not, enjoy with their bodies or by their bodies." Such, he declared, bring plagues and famine into towns, raise wars and dissensions, till such time as they obtain and enjoy that which they love.

Chapter 4. Rites, Symbols, and Offerings²⁰. Proklos affirms that the Divine Necessity was always coincident with the Divine Will and Purpose. Plato explains it as a habitude of the Efficient Cause or Author of Existence and Matter. Thus, also, there is a necessity in the thoughts and actions of human beings, yet the soul is self-moving, and so is its own "Cause."

Chapter 4. Rites, Symbols, and Offerings²¹. Thales, Pythagoras, Plato, and the Stoics generally held that the demons were beings of a psychic, rather than of an actual divine nature. Plutarch ascribed to them only a limited term of existence.

Chapter 4. Rites, Symbols, and Offerings²². It may be observed in this treatise that the divine personalities are very commonly indicated by terms in the neuter gender. The same is true in other instances. Mr. Ralph Waldo Emerson was once in conversation with the Rev. Cyrus Bartol, the Transcendentalist clergyman of Boston. The latter mentioned the Supreme Being, using the masculine pronoun. "Why not say 'It,' " Mr. Emerson asked?

Chapter 4. Rites, Symbols, and Offerings²³. Whatever we keep most closely in thought, whether with favor or aversion, we gradually become like in character. Paul wrote like a philosopher to the Corinthian disciples. After referring to Moses with a vail, he adds "We all with face unveiled, looking on the glory of the Lord as in a mirror, are transformed from glory to glory into the same image from his spirit."

Chapter 4. Rites, Symbols, and Offerings²⁴. In the Theurgic discipline of neophytes, there were several stages to be surmounted before arriving at the degree denominated "Perfection" or purity. We may trace them in the chapter, as follows: 1. The coming to the divinity who is supplicated. 2. The assimilation into the likeness of the divinity, and 3. Perfection. In the first of these degrees the candidate was styled Most Excellent; in the second, Divine; and in the third, Theopator; as now being fully identified with Deity itself.

Chapter 4. Rites, Symbols, and Offerings²⁵. Origen affirmed that the angels have bodies, and that God alone is a spiritual essence, without body. Hence the clause in the Confession, "without body, parts, or passions."

Chapter 4. Rites, Symbols, and Offerings²⁶. Plato has explained this very similarity in the *Timeus*. "When each of the stars necessary for the constitution of Time had obtained a motion adapted to its condition, and their bodies bound or encompassed by living chains, had become beings possessing life, and had learned their prescribed duty, they pursued their course."

Chapter 4. Rites, Symbols, and Offerings²⁷. That the Supreme Being is One and Absolute is the leading principle of every ancient faith, however bizarre and polytheistic it may be esteemed. Amon, the tutelar god of Thebes in Egypt who may have been in the mind of Abammon when writing was denominated: "The One, the Maker of all that have being." The Mysteries of Ser-Apis (Serapis) were favored by Iamblichos, and the Rites of Mithras by Porphyry.

Chapter 4. Rites, Symbols, and Offerings²⁸. Plato makes use of an expression signifying "not subject to decay or disease;" Aristotle, "not being increased or changed."

Chapter 4. Rites, Symbols, and Offerings²⁹. These are the astral globes which these divinities, being themselves in reality spiritual essences, were supposed to encompass and permeate.

Chapter 4. Rites, Symbols, and Offerings³⁰. In this sentence the feminine and masculine relation, as typifying the procedure of the divine operation, is very distinctly set forth. The phusis and genesis actually signify as much. In this treatise, as in other philosophic works, genesis signifies the descending of the creative energy from the sempersistent world into the sphere and condition of created existence, and phusis, or nature, is the female or productive agency, by which the transition is accomplished. The sentence admits accordingly to be also rendered as follows: "Others go forth from them into the womb of the world (Kosmos), even the world itself, and likewise descend in due order through the whole generative process, continuing, without hindrance, as far as the

incomplete races.”

Chapter 4. Rites, Symbols, and Offerings³¹. Abammon follows the Egyptian category and adopts the Grecian names for divinities supposed to be nearest in character and quality. In this description, Kronos or Saturn represents the centripetal and Aries or Mars the centrifugal force.

Chapter 4. Rites, Symbols, and Offerings³². It would be easy to imagine this as happening in the case of the hundred and more asteroids, that exist in the space between the orbits of the planets Mars and Jupiter, or of the comets that so often come rushing through space.

Chapter 4. Rites, Symbols, and Offerings³³. See Chapter VIII.

Chapter 4. Rites, Symbols, and Offerings³⁴. Damaskios remarks that “the Divine Intelligence which encompasses all things after the manner of models, brings them forth from itself as likenesses.”

Chapter 4. Rites, Symbols, and Offerings³⁵. That is, all are brought back to their source and rooted in their cause.

Chapter 4. Rites, Symbols, and Offerings³⁶. In other words, this atman, or self, is at once all-receptive and all-procreative, as having the joint powers of procreation and production.

Chapter 4. Rites, Symbols, and Offerings³⁷. We are thus brought to the central principle of the ancient philosophy and worship; that the many divinities are in essence the One Sole Deity, and comprised in the Paternal Cause of the Universe. The Orphic Carmen in the same way inculcated that all the gods and both the sexes are included in the same Zeus. They are attributes, or qualities, of the One, personalities rather than individuals.

Chapter 4. Rites, Symbols, and Offerings³⁸. The older laws of the Athenians were called thesmá as being ordained by the gods, or rather the priests. The laws of Drako were thesmoi, those of Solon nomoi or regulations.

Chapter 4. Rites, Symbols, and Offerings³⁹. Damaskios remarks, that “we discourse after the manner of men respecting principles that are extolled as divine.”

Theurgia or The Egyptian Mysteries By Iamblichos

Porphyry to the Prophet Anebo. ¹ Greeting.

I will begin this friendly correspondence with thee with a view to learning what is believed in respect to the gods and good demons and likewise the various philosophic speculations in regard to them. Very many things have been set forth concerning these subjects by the (Grecian) philosophers, but the for the most part have derived the substance of their belief from conjecture.

1. The Gods and their peculiarities

In the first place, therefore, it is to be taken for granted that there are gods. I ask then: what are the peculiarities of the superior races, by which they are differentiated from each other? Are we to suppose the cause of the distinction to be their energies or their passive motions, or things consequent: or is it a classification established by difference of bodies – the gods being distinguished by aetherial bodies, the demons by aërial bodies, and souls by bodies pertaining to the earth?

As the gods dwell in heaven only, I ask therefore, why are invocations at the Theurgic Rites directed to them as being of the Earth and Underworld? How is it that although possessing power unlimited, undivided, and unrestricted, some of them are mentioned as being of the water and of the atmosphere, and that others are allotted by definite limitations to different places and to distinct parts of bodies? If they are actually separated by circumscribed limitations of parts, and according to diversities of places and subject-bodies, how will there be any union of them one to another?

How can the Theosophers ² consider them as impressionable? For it is said that on this account phallic images are set up and that immodest language is used at the Rites? ³ Certainly if they are impassive and unimpressionable the invocations of the gods, announcing favorable inclinations, propitiations of their anger and expiatory sacrifices, and still further what are called “necessities of the gods,” will be utterly useless. For that which is impassive is not to be charmed or forced ⁴ or constrained by necessity.

Why, then, are many things performed to them in the Sacred Rites, as to impressionable beings? The invocations are made as to gods that are impressionable beings: so that it is implied that not the demons only are impressionable, but the gods likewise, as was declared in Homer:

“Even the gods themselves are yielding.”

Suppose, then, we say, as certain individuals have affirmed, that the gods are pure mental essences and that the demons are psychic beings participating of mind. ⁵ The fact remains, nevertheless, that the pure mental essences are not to be charmed or mingled with things of sense, and that the supplications which are offered are entirely foreign to this purity of mental substance. ⁶ But on the

other hand the things that are offered are offered as to sensitive and psychic natures.

Are gods, then, separated from demons by the distinction of bodied and unbodied? If, however, only the gods are incorporeal, how shall the Sun, the Moon, and the visible luminaries in the sky be accounted as gods?

How is it that some of them are givers of good and others bring evil?

What is the bond of union that connects the divinities in the sky that have bodies with the gods that are unbodied?

The gods that are visible (in the sky) being included in the same category with the invisible, what distinguishes the demons from the visible, and likewise the invisible, gods?

2. The superior races and their manifestations

In what does a demon differ from a hero or half-god or from a soul? ⁷ It is it in essence, in power, or in energy? ⁸

What is the token (at the Sacred Rites) of the presence of a god or an angel, or an archangel, or a demon, or of some archon, or a soul? For it is a common thing with the gods and demons alike, and with all the superior races, to speak boastfully and to project an unreal image into view. ⁹ Hence the race of the gods is thus made to seem to be in no respect superior to that of the demons.

It is also acknowledged that ignorance and delusion in respect to the gods is irreligiousness and impurity, and that the superior knowledge in respect to them is holy and helpful: the former being the darkness of ignorance in regard to the things revered and beautiful, and the latter the light of knowledge. The former condition will cause human beings to be beset with every form of evil through ignorance and recklessness, ¹⁰ but the latter is the source of everything beneficial.

3. Oracles and Divination

What is it that takes place in divination? For example, when we are asleep, we often come, through dreams, to a perception of things that are about to occur. We are not in an ecstasy full of commotion, for the body lies at rest, yet we do not ourselves apprehend these things as clearly as when we are awake.

In like manner many also come to a perception of the future through enthusiastic rapture and a divine impulse, when at the same time so thoroughly awake as to have the senses in full activity. Nevertheless, they by no means follow the matter closely, or at least they do not attend to it as closely as when in their ordinary condition. So, also, certain others of these ecstasies become entheos or inspired when they hear cymbals, drums, or some choral chant; as for example, those who are engaged in the Korymbantic Rites, those who are possessed at the Sabazian festivals, and those who are celebrating the Rites of the Divine Mother. Others, also, are inspired when drinking water, like the priest of the Klarian Apollo at Kolophon; others when sitting over cavities

in the earth, like the women who deliver oracles at Delphi; others when affected by vapor from the water, like the prophetesses at Branchidæ; and others when standing in indented marks like those who have been filled from an imperceptible inflowing of the divine plerome. Others who understand themselves in other respects become inspired through the Fancy: some taking darkness as accessory, others employing certain potions, and others depending on singing and magic figures. Some are affected by means of water, others by gazing on a wall, others by the hypethral air, and others by the sun or in some other of the heavenly luminaries. Some have likewise established the technique of searching the future by means of entrails, birds, and stars.

What, I ask, is the nature of divination, and what is its peculiar character? The diviners all say that they arrive at the foreknowledge of the future through gods or demons, and that it is not possible for others to have any inkling of it only those who have command over the things to be. I dispute, therefore, whether the divine power is brought down to such subserviency to human beings as, for instance, not to hold aloof from any who are diviners with barley-meal.

In regard, however, to the origins of the oracular art, it is to be doubted whether a god, or angel, or demon, or some other such being, is present at the Manifestations, ¹¹ or at the divinations, or at any other of the Sacred Performances, as having been drawn thither through you by the necessities created by the invocations.

Some are of opinion that the soul itself both utters and imagines these things, and that there are similar conditions of it which have been produced from little sparks; others, that there is a certain mingled form of substance produced from our own soul and from the divine in breathing; others, that the soul, through such activities, generates from itself a faculty of Imagination in regard to the future, or else that the emanations from the realm of matter bring demons into existence through their inherent forces, especially when the emanations are derived from animals.

These conjectures are put forth for the following statements:

1. That during sleep, when we are not engaged with anything, we sometimes chance to obtain perception of the future.
2. That likewise, an evidence that a condition of the Soul is a principal source of the art of divining is shown by the facts that the senses are held in check, fumes and invocations being employed for the purpose; and that by no means everybody, but only the more artless and young persons, are suitable for the purpose.
3. That likewise, ecstasy or alienation of mind is a chief origin of the divining art; also the mania which occurs in diseases, mental aberration, abstinence from wine, suffusions of the body. fancies set in motion by morbid conditions or equivocal states of mind, such as may occur during abstinence and ecstasy, or apparitions got up by technical magic. ¹²
4. That both the realm of Nature, Art, and the feeling in things of common throughout

the universe, as of the parts in one animal, contain foreshadowings of certain things with reference to others. Moreover, there are bodies so constituted as to be a forewarning from some to others. Examples of this kind are manifest by the things done, namely: that they who make the invocations (at the Rites) carry stones and herbs, tie sacred knots and unloose them, open places that are locked, and change the purposes of individuals by whom they are entertained, so that from being paltry they are made worthy. They also who are able to reproduce the mystic figures are not to be held in low esteem. For they watch the course of the heavenly bodies, and tell from the position and relation of one with another whether the oracular announcements of the ruling planet will be false or true, or whether the rites which have been performed will be to no purpose, or will be expressive or archaic, although no god or demon is drawn down to them.

There are some, however, who suppose there is likewise, the subject-matter of a tricky nature, artful, and assuming all shapes, turning many ways, that personates gods and demons and souls of the dead like actors on the stage; and that through these everything that seems to be good or bad is possible. They are led to form this judgment because these subject-spirits are not able to contribute anything really beneficial as relates to the soul, nor even to perceive such things; but on the other hand, they ill treat, deride, and often impede those who are returning to virtue.

They are likewise full of conceit, and take delight in vapors and sacrifices.

5. Because the begging priest with open mouth attempts in many ways to raise our expectations. ¹³

4. The invocation of the Theurgic powers

It perplexes me greatly to form a conception how they who are invoked as superior beings are likewise commanded like inferiors; also that they require the worshipper to be just, although when entreated, they themselves consent to perform unjust acts. They will not hearken to the person who is invoking them if he is not pure from sexual contamination, yet they themselves do not hesitate to lead chance individuals into unlawful sexual relations.

5. Sacrifices and Prayers.

(I am likewise in doubt in regard to the sacrifices, what utility or power they possess in the world and with the gods, and for what reason they are performed, appropriate for the beings thus honored and advantageously for the persons who present the gifts. ¹⁴)

The gods also require that the interpreters of the oracles observe strict abstinence from animal substances, in order that they may not be made impure by the fumes from the bodies; yet they themselves are allured most of all by the fumes of the sacrifices of animals.

6. Conditions for successful results

It is also required that the Beholder ¹⁵ must be pure from the contact of

anything dead, and yet the rites employed to bring the gods hither, many of them, are made effective through dead animals.

What, then, is more preposterous than these things – that a human being, inferior in dignity, should make use of threats, not to a demon or soul of some dead person, but to the Sun-King himself, or to the Moon, or some one of the divine ones in the sky, himself uttering falsehood in order that they may be caused to speak the truth? For the declaration that he will assail the sky, that he will reveal to view the Arcana of Isis, that he will expose to public gaze the ineffable symbol in the innermost sanctuary, that he will stop the Baris; that, like Typhon, he will scatter the limbs of Osiris, or do something of a similar character, what is it but an extravagant absurdity, threatening what he neither knows how nor is able to perform? What dejection of spirit does it not produce in those who, like children, destitute of intelligence, are dismayed by groundless fear and terrified by these false alarms?

And yet Chairemon, the Scribe of the Temple, records these things as current discourse among the Egyptian priests. ¹⁶ It is also said that these threats, and others of like tenor, are very violent.

7. Sacred names and symbolic expressions

The Prayers also: What do they mean when they speak of the one coming forth to light from the slime, sitting on the Lotus-blossom, sailing in a boat, changing forms according to the season, and assuming a shape according to the Signs of the Zodiac? For so this is said to be seen at the Autopsias; and they unwittingly attribute to the divinity a peculiar incident of their own imagination. If, however, these expressions are uttered figuratively, and are symbolic representations of his forces, let them tell the interpretation of the symbols. For it is plain that if they denote the condition of the Sun, as in eclipses, they would be seen by every one who looked toward it intently.

Why, also, are terms preferred that are unintelligible, and of those that are unintelligible why are foreign ones preferred instead of those of our own language? For if the one who hears gives attention to the signification it is enough that the concept remains the same, whatever the term may be. For the divinity that is invoked is possibly not Egyptian in race; and if he is Egyptian, he is far from making use of Egyptian speech, or indeed of any human language at all. Either these are all artful contrivances of jugglers, and disguises having their origin in the passive conditions induced about us through being attributed to the divine agency, or we have left unnoticed conceptions of the divine nature that are contrary to what it is.

8. The First Cause

I desire you further to declare plainly to me what the Egyptian Theosophers believe the First Cause to be; whether Mind, or above mind; and whether one alone, or subsisting with another or with several others; whether unbodied or embodied, whether the very same as the Creator of the Universe (Demiurgos) or prior to the Creator; also whether they likewise have knowledge respecting Primal Matter; ¹⁷ or of what nature the first bodies were; and whether the Primal Matter was unoriginated, or was generated. For Chairemon and the others hold that there is not anything else prior to the

worlds which we behold. At the beginning of their discourses they adopt the divinities of the Egyptians, but no other gods, except those called Planets, those that make up the Zodiac and such as rise with these, and likewise those divided into decans, those which indicate nativities, and those which are called the Mighty Leaders. The names of these are preserved in the Almanacs, together with their routine of changes, their risings and settings, and their signifying of future events. For these men perceived that the things which were said respecting the Sun-God as the Demiurgos, or Creator of the Universe, and concerning Osiris and Isis, and all the Sacred Legends, may be interpreted as relating to the stars, their phases, occultations, and revolutions in their orbits, or else to the increase and decrease of the Moon, the course of the Sun, the vault of the sky as seen by night or by day, or the river Nile, and, in short, they explain everything as relating to natural objects, and nothing as having reference to incorporeal and living essences. ¹⁸

More of them likewise attribute to motion of the stars whatever may relate to us. They bind everything, I know not how, in the indissoluble bonds of necessity, which they term Fate, or allotment; and they also connect everything with those gods whom they worship in temples and with carved images and other objects, as being the only unbinders of Fate.

9. Nativities and Guardian Demons

The next thing to be learned relates to the peculiar demon or guardian spirit – how the Lord of the House ¹⁹ assigns it, according to what purpose or what quality of emanation or life or power conies from it to us, whether it really exists or does not exist, and whether it is impossible or possible actually to find the Lord of the House. Certainly, if it is possible, then the person has learned the scheme of his nativity; knowing his own guardian demon, is liberated from fate, is truly favored by divinity. Nevertheless, the rules for casting nativities are countless, and beyond comprehension. Moreover, it is impossible for expertness in astral observations to amount to an actual knowing, for there is great disagreement in relation to it, and Chairemon, as well as many others, have spoken against it. Hence the assumption of a Lord of the House (or Lords of the House, if there are more than one) pertaining to a nativity is almost confessed by astrologers themselves to be beyond absolute proving; and yet it is from this assumption, they say, that the ascertaining of the person's own personal demon is possible.

But further, I wish to be informed whether our personal demon presides over some specific one of the regions within us. For it seems to be believed by some persons that there are demons allotted to specific departments of the body – one over the health, one over the figure, and another over the bodily habits, forming a bond of union among them; and that one is placed as superior over all of them in common. And further, they suppose that there is one demon guardian of the body, another of the soul, and another of the superior mind; ²⁰ also that some demons are good and others bad.

I am in doubt, however, whether our particular demon may not be a special part of the soul; and hence he who has a mind imbued with good sense would be the truly favored one.

I observe, moreover, that there is a twofold worship of the personal demon; also, that some perform it as to two and others as to three, but nevertheless he is invoked by all with a common form of invocation.

10. Eudemonia, or the True Success

I question, however, whether there may not be some other secret path to true success which is afar from (the Rites of) the gods. I doubt whether it is really necessary to pay any regard to the opinions of individuals in regard to the divine endowment of divination and Theurgy, and whether the Soul does not now and then form grand conceptions. On the contrary, also, there are other methods for obtaining premonitions of what will take place. Perhaps, also, they who exercise the divine art of divining may indeed foresee, and yet they are not really successful: for they may foresee future events and not know how to make use of the foresight properly for themselves. I desire from you, therefore, to show me the path to success and in what the essence of it consists. For among us (philosophers) there is much wrangling, as though good might be derived from human reasonings by comparison of views.

If, however, this part of the inquiry, the intimate association with the superior race is passed over by those who devised it, wisdom will be taught by them to trivial purpose, such as calling the Divine Mind to take part about the finding of a fugitive slave, or a purchase of land, or, if it should so happen, a marriage or a matter of trade. Suppose, however, that this subject of intimate communion with the Superior race is not passed over, and those who are thus in communication tell things that are remarkably true about different matters, but nothing important or trustworthy in relation to the true success – employing themselves diligently with matters that are difficult, but of no use to human beings – then there were neither gods nor good demons present, but on the contrary, a demon of that kind called “Vagabond,” or it was all an invention of men or an air-castle of a mortal nature.

Notes:

1. Porphyry, it is well known, was a distinguished scholar, and the foremost writer in the later Platonic School. He was a native of Tyre, and his name Molech, or King, was rendered by Longinus into Porphurios, denoting the royal purple, as a proper equivalent. He was a disciple of Plotinus, who had broadened the field of philosophic study till it included the “Wisdom of the East.” In personal habits he followed the Pythagorean discipline. He was a severe critic of the Gnostic beliefs then current, and he evidently included with them also the new Christian faith. His mysticism was spiritual and contemplative, and he regarded the ceremonial rites of the Egyptian theurgy with distrust. He favored Mithraism, which prevailed in Asia, while Iamblichos belonged rather to the cult of Serapis, which was the State religion of Egypt.

Of Anebo we know little. He is addressed as an Egyptian priest, and his name is that of Anabu or Anubis, the Egyptian psychopompos and patron of sacred literature. He was a “prophet” hen niter or servant of divinity, and expounder of the oracles: and Porphyry himself an “epoptes” or initiated person, asks him accordingly to explain the Egyptian

theosophic doctrines respecting the divine beings, rites and religious faith.

2. The Theosophers were regarded as learned in the arcane knowledge, and especially in Theurgy. Iamblichos appears to have adopted these Rites and usages from the Egyptian worship, including with them a philosophic groundwork from the Platonic doctrines.

3. The use of images and emblems of a sacred character to typify divine power and energy is universal. Somewhat of the divine was supposed to inhere in them. The "images" and asheras or "groves" mentioned in the Bible were of this character. So was the "idol in a grove," made by Queen Maachah, as well as the simulacra which, as Herodotus states, the Egyptian women carried at the festivals.

4. Compare Gospel according to Matthew, XI, 12. "From the days of John the Baptist till now, the kingdom of heaven is forced, and they who are violent seize it."

5. Xenokrates, who was a disciple of Plato, himself taught these doctrines. He considered the heavens as divine and that the substance of the divine nature was mind pure and absolute. He also described the stars as "visible divinities." The demons were depicted as of a psychic nature, subordinate to that of the gods, and therefore subject to emotion and perturbation like human beings, while at the same time sharing in a degree in the power and intelligence of the gods.

6. Greek, the mind or "rational soul," the essence or principle of intelligence which transcends the understanding or reasoning faculty, and is capable of knowing truth intuitively and instinctively from being itself of divine origin.

7. Here Porphyry has given an ancient classification of spiritual beings into four orders, the gods, demons or guardians, the heroes or half-gods, and souls. There were other distinctions in the Eastern countries, and we find Abammon, the Teacher, adding to these the archangels, angels, and archons of both the higher and lower nature. These were named in several of the Gnostic categories that were extant at that period. "We have no conflict with blood and flesh," says the Christian apostle, "but with archonates, authorities, the world-rulers of this dark region, and spiritual forces of evil in the upper heavens."

8. By "essence" is signified the underlying principle of being; by "power" the intermediate agency; and by "energy" the operative faculty which enables actual results.

9. This inquiry in regard to the apparitions which the candidates beheld at the initiation is made plainer by Proklos: "In the most sacred stages of the Perfective Rites," says he, "before the gods come into view, there appear intrusive figures of demons of the Underworld, to draw away the attention of the candidate from the spotless Good to the gross and material." It may be pertinent to add that in the several Grottoes or Halls of Initiation there was machinery ingeniously constructed for the purpose of representing divine and other personages. See *The Epicurean*, by Thomas Moore, and *The Great Dionysiac Myth*, by Robert Brown, Jr., VI, 2, 3.

10. "I do not see any sin in the world," says George Sand, "But I see a great deal of ignorance."

11. Greek, epiphany – an apparition or manifestation, such as was exhibited in mystic and theurgic rites.

12. Goeteia (goetia), or "black magic."

Chapter 1. Letter of Porphyry to Anebo¹³. The agurtes or begging priest generally belonged to the worship of Rhea or Cybele, the Mother. He is frequently depicted in a most unfavorable light. Apuleius speaks of a company of these emasculate priests in the eighth book of the *Metamorphoses*. They are also described in the *Republic* of Plato: "Agurtæ and Mantics frequent the houses of the rich and persuade them that they possess a power granted by the gods to expiate, by sacrifices and chants any unjust act that has been committed and that they induce the gods by blandishments and magic rites to help them. They collected money in this way, and they also followed the selling of nostrums and telling of fortunes."

14. This paragraph is taken from Part V, Chapter I, and is not found in the text of the Letter as we have it. It is quoted there as belonging in this place. In the original Greek text the preceding paragraph appears in unbroken connection with the one which follows, and in dividing them we find it necessary to add a clause, to introduce the subject.

15. Greek, an epopt, seer, or beholder; a person admitted to the higher degree of initiation. "The Perfective Rite leads the way as the muesis or mystic initiation," says Proklos, "and after that is the epopteia or beholding." Theôn describes it as three degrees – "the Purification, Initiation, and Beholding of the Divine Vision." Mr. Robert Brown, Jr., explains the last of these very fully. "This is the Autopsia or Personal Inspection, the Crown of Mysteries, the Epopteia or Divine Beholding, and he becomes an Epoptes or Contemplator." (Great Dionysiak Myth, VI, 2, 3.) As the Autoptic Visions are the principal topic in this work, the term "Beholder" is adopted uniformly for several words of the same import.

16. As the term "Egyptian" is applied only in this work to individuals of sacerdotal rank, the designation of "priest" is added. The Hierogrammateus, or Scribe of the Temple, was a priest of the lower class, and his duty was to keep the records, teach students the religious observances, and take care that they were duly obedient. The prophets were superior to the Scribes. The Temples of Egypt, like those of Babylonia, were seminaries for instruction, and all departments of Science and philosophy were included in their teachings as being Sacred Learning.

17. Greek, hulé; a term first adopted by Aristotle to signify the objective, negative or passive element upon which the Creative energy operates. Plato named it the "receptacle," as containing the creative energy and making it effective.

18. Plutarch comments somewhat severely upon this mode of interpretation. In his treatise On Isis and Osiris he remarks that some individuals do not scruple to say that Osiris is the Sun, Isis no other than the Moon, and that Typhon is fire, or drouth, or the Ocean. But he adds in rebuttal: "No one can rationally imagine that these objects can be gods in themselves; for nothing can be a god that is either without soul, or under the power of natural objects." He also remarks that "there is an excellent saying among philosophers, that they who have not learned the true sense of words will also mistake in the things that are meant."

19. Greek, oikoresmotys: Hebrew, Baal Zebul. In astrology a "house" is a twelfth part of the sky as marked out for the purpose of horoscopes. Every sign of the Zodiac thus had a "house," which a planet or planetary genius was considered as occupying, and thence ruling the days and events of the month to which it belonged.

20. Compare First Epistle of Paul to the Thessalonians, V, 23: "Spirit and soul and body."

Chapter 2. Reply of Abammon the Teacher to The Letter of Porphyry to Anebo.
Part I. The Gods and their peculiarities
Theurgia or The Egyptian Mysteries By Iamblichos
Introduction

Hermes ¹, the patron of literature, was rightly considered of old to be a god common to all the priests ² and the one presiding over the genuine learning relating to the gods, one and the same among all. Hence our predecessors were wont to ascribe to him their discoveries in wisdom and to name all their respective works Books of Hermes.

If, therefore, we participate in this god ³, of the measure which has fallen to us and become possible to us, thou dost well to propose these questions in regard to the Divine Sciences to the priests as to friends for an accurate solution. Having good reason therefore for considering the letter sent by thee to Anebo, my pupil, as having been written to myself, I will answer thee truly in regard to the matters about which thou hast enquired. For it would not be becoming that Pythagoras, Plato, Demokritos, Eudoxos, and many others of the old Greeks, should have obtained competent instruction from the temple-scribes of their own time ⁴, but that thou who art contemporary with us, and having the same disposition as they, should be turned away by those now living and recognized as public teachers.

Accordingly, I myself engage thus in the present discussion. Thou, if thou dost so choose, art at liberty to consider the person who is now writing to thee as the same individual to whom thou hast sent thy letter. If, however, it shall seem to thee more proper, then regard the individual who is discoursing with thee in writing to be one or some other prophet of the Egyptians, for this is not a matter worth differing about. Or, as I think still a better way, let it pass unnoticed whether the person speaking is of inferior or superior rank, and direct the attention solely to the things that are uttered, thus arousing the understanding to eagerness simply as to whether that which is said be true or false.

In the first place, let us take the subjects separately in order to ascertain the scope and quality of the problems which are now proposed for discussion. Next let us examine in detail the theories respecting divine matters from which thy doubts were conceived, and make a statement of them, as to the sources of knowledge by which they are to be investigated.

Some which are badly jumbled together require to be taken apart; while others have relation to the Divine Cause through which everything exists, and so are readily apprehended. Others which we might put forward according to a certain plan of exhibiting contradictory views, draw out the judgment in both directions; and there are likewise some which demand from us to explain the whole of the Initiatory Rites.

Such being the facts, our answers are to be taken from many places and from different sources of knowledge. Some of these introduce fundamental principles from the traditions which the sages of the Chaldaeans delivered; others derive support from the doctrines which the Prophets of the Egyptian temples teach; and some of them follow closely the speculations of the Philosophers and elicit the conclusions which belong to them. And now there are some of these which involve an unbecoming dispute from diverse notions that are not worthy of a word; and others that have their origin from prejudices common to human beings. All these, therefore, are to be disposed of in various ways by themselves, and are in many ways connected with one another.

Hence, on account of all these things, there is some discussion necessary for the directing of them properly.

PLAN OF THE DISCUSSION

We will, therefore, set forth to thee the hereditary opinions of the Assyrian Sages ⁵ in regard to the True Knowledge, and will show thee in plain terms our own. Some things in the Gnosis will be brought into the discussion from the innumerable arcane writings, and the rest will be from the works upon the entire range of Divine Matters, which the old compilers have collected into a book of limited dimensions.

If, however, thou wouldst propose some philosophic question, we will determine it for thee according to the ancient Tablets of Hermes ⁶, which Plato and Pythagoras, having studied thoroughly beforehand, combined together in Philosophy.

But questions that are foreign to the subject, or that are disputatious and exhibit a contentious disposition of mind, we shall tone down gently and aptly, or else show their impropriety. So far also as they go in the line of common ways of thinking we shall try to discuss them in a familiar manner. Those, likewise, which require the experiences of the Divine Dramas ⁷ for an intelligent understanding we will, as far as it is possible, explain by words alone ⁸; but those which are likewise full of intellectual speculation will be shown to be effective for purifying (from the earthly contamination).

It is possible, however, to tell the signs of this which are worthy to be noted, and from these both thou and those who are like thee in mind can be brought near to the very essence of things that have real being ⁹.

So far, however, as they may be actually known through words, none of these matters will be left without a perfect demonstration, and in reference to everything we shall give thee carefully the proper explanation. Those which relate to divine matters we will answer as theologists; and those which pertain to Theurgy we will explain theurgically. Those of a philosophic character we will search out with thee as philosophers, and such as extend to the Primary Causes we will bring forth into light following the argument together according to first principles. Such, however, as pertain to morals or final results we will determine properly according to ethical form; and other questions, in like manner, we will treat according to their proper place in the arrangement.

We will now proceed to thy questions.

TWO FORMS OF KNOWING

Thou beginnest accordingly by saying: "In the first place, it is to be taken for granted that there are gods." Speaking in this way is not right. For the inborn knowledge in respect to the gods is coexistent with our very being, and is superior to all judging and deciding beforehand. Indeed, it is preexistent both to argument and demonstration, and is united interiorly from the beginning to its own divine cause and is coexistent with the inherent longing and impulse of the soul to the Good ¹⁰.

If, however, we must speak truly, the conjoining to the divine nature is not knowing, for this is kept separate after a manner by an otherness. ¹¹

Prior to this knowing, however, which is as of one individual having knowledge of another, the intimate union as in a single concept is self-originated and indistinguishable. Hence we ought to concede the point as though possibly it might not be granted, not to assume it as a matter of uncertainty'. for it always existed simply in energy. Nor is it proper to put it to proof in this way as though we had authority to judge and reject ; for we are ourselves encompassed in it, or rather we are filled by it, and the very selfhood which we are we possess in this knowing of the gods ¹².

I have, moreover, the same thing to say to thee in regard to the Superior races which come next in order after the gods. I mean the demons, heroes, and uncontaminate

souls ¹³.

For it is always necessary to bear in mind respecting these subordinate races that they have one defined form of essence; also that we put aside from our conception of them the indefiniteness and instability which are incident to the human constitution and renounce the tendency to incline to the other side which arises from attempts to counterbalance the opposition of the arguments. For such a thing is foreign to the principles of reason and life, but is derived from secondary sources, such even as belong to the power and contrariness of the realm of generated existence. It is necessary, however, to treat of them as being of a uniform nature.

Let it be admitted, then, that with the companions of the gods ¹⁴ in the eternal region there is the innate perception of them.

Therefore, even as they have their being always after the same manner, so also the human soul is conjoined to them by Knowledge according to the same principles; never by any conjecture, opinion or reasoning which have their beginning in Time pursuing the essence which is beyond all these, but by pure and faultless intuitions which it received out of eternity from the gods being conjoined with them in these principles.

Nevertheless, thou seemest to consider the knowing of divine beings to be the same as the knowing of other matters, and likewise that a point may be taken for granted from opposing arguments, as is usual in debates. But there is no such similarity. For the perceiving of them is absolutely distinct from everything of antithetic character. It is not made valid by being now conceded or by coming into existence, but on the other hand it is a single concept, and coexisted with the soul from eternity.

I say such things to thee, therefore, in regard to the first principle in us, at which it is necessary for those to begin who would both speak and hear anything whatever concerning the superior races or about ourselves.

PECULIARITIES OF THE SUPERIOR RACES

Then follows thy question: "What are the peculiarities of the Superior races by which they are differentiated from each other?" If by peculiarities" thou meanest differences as of species under the same genus, which are distinguished by opposite characteristics, as rational and irrational under the head of animal, we by no means admit the existence of such differences in beings that neither have one common essence ¹⁵ nor characteristics diverse from one another, nor have received an organization from a common source which is undefined and yet defines the peculiarity.

If, however, thou supposest the peculiarity to be a certain simple condition limited in itself, as in primary and secondary races, which differ in their entire essence and in the whole genus, thy notion of the peculiarities is reasonable. For these peculiarities of beings that always exist will all be in some manner set apart, separate and simple.

The questioning, however, is going forward to little purpose, for it behooves us, first of

all, to ascertain what the peculiarities are in regard to essence, then in regard to power, and so, after that, what they are in regard to energy. But as thou hast now put the question in reference to certain peculiarities which distinguish them, thou speakest only of the peculiarities of energies. Hence thou askest the difference in them in respect to the last things as mentioned, but art passing over unnoticed, without questioning, the first, and, as relating to the elements of variableness, the most important of them.

Moreover, there is something added in the same place in regard to “active or passive motions.” This is a classification not at all proper as relates to the superior races; for in none of them is there the contrast of active and passive, but certain of their energies are to be contemplated as unconditioned, unrestrained, and without relation to anything opposing. Hence we do not admit in regard to them that there are such motions as active and passive in respect to the soul. For we do not concede self-motion from moving and being set in motion; but we suppose that there is a certain unique self-originating motion which is its very own, and not an aptitude derived from an outside source taking from it action in itself and a passive condition by itself. Who, then, may admit in respect to the races superior to the soul that they are to be distinguished by the peculiarities of active and passive motions? ¹⁶

Further, therefore, that expression which is added, “or things consequent,” is inconsistent with their nature. For in the case of those of composite nature, and of those that exist together with others or in others, or that are encompassed by others, some are conceived of as leading and others as following, some as being themselves essences and others as contingent upon essences. For there is an arrangement of them in regular order, and there intervenes unfriendliness and disagreement between them. But in regard to the superior races, they are all to be considered as self-subsisting. The perfect ones take rank as chiefs, and are separate by themselves, and neither have their substance from others or in others. Thus there is nothing about them that is “consequent.” In no respect, therefore, is their peculiarity characterized from these.

And now there occurs at the end of the question the natural distinction. The question is whether the essences are to be known by energies, physical motions, and things consequent. Everything, however, is to the contrary. For as the energies and motions made up the actual substance of the essence, they would themselves likewise be dominant in regard to their difference. If, however, the essences generate the energies, being themselves previously separate, then they impart to the motions, energies, and things consequent, that which constitutes the differences. This mode, therefore, is contrary to what is supposed in the present bunt to find the peculiarity.

In short, however, whether thou imaginest that there is one race of gods and one of demons, and in like manner of heroes (or half-gods), and after the same course of things, of unbodied souls, or whether thou supposest that there are many races in each category, thou demandest that the distinguishing of them shall be according to peculiarities. For if thou supposest each race to be a unit, the whole arrangement of divine orders according to the more perfect classification ¹⁷ is overturned; however, they are defined by these according to race, as it may seem satisfactory, and

there is not among them one common definition in relation to essence except that those that are prior are distinguished from the inferior races, it is not possible to find out their common boundaries. And even though it should be possible, this very thing takes away their peculiarities. Hence the object which is sought is not to be found in this way. He, however, will be able to define their peculiarities who reasons upon the analogous sameness in the higher orders; as, for example, with the many races among the gods, and again with those among the demons and half-gods, and lastly with souls. hence it has been demonstrated by us through this argument what is the right course of the present investigation, its limitation, and how it is possible for it to be made.

ARRANGEMENT OF THE SUPERIOR ORDERS

Let us next proceed with the answers, one after another, to the questions which have been asked. There is then the Good: both that which is beyond essence and that which exists through essence. I am speaking of that essence which is the 'most ancient and most to be revered, and which, as to is incorporeal. ¹⁸ It is a special peculiarity of the gods, and is characteristic of all the races that are included with them; and hence, not being divided from this, but existing in like manner the same in them all, it preserves their peculiar distribution and arrangement.

SOULS

But with souls that are ruling over bodies, that are occupied with the care of them, and that are placed in order apart by themselves in the eternal regions, before the transition to generated existence, there is not present either the essence of the Good, or the Cause (or Supreme Principle) of the Good which is prior to essence; but there comes from it a certain participation and habit of good, as we perceive that a sharing of beauty and virtue is very different from what we observe with human beings. For this is equivocal, and becomes manifest in complex natures as sole thing acquired. But the principle of goodness is established unchangeable and perpetual in the Souls. It never at any time goes away from itself, nor is it taken away by anything else.

DEMONS AND HEROES OR HALF-GODS

Such then being the case with the divine races, the first and the last (the gods and souls), let us consider the two races intermediate between these two extremes, namely: 1. That of heroes or half-gods, which not only ranks higher than the order of souls in power and virtue, moral beauty and greatness, and excels it in every good quality which is incident in souls, but is also closely joined to them by the kindred relationship of a similar form of life. 2. The other, the race of demons, which is closely allied to the gods, yet is in a certain sense inferior to them, following as though it was not first in rank but accompanying in subservience to the good pleasure of the gods. This race causes the otherwise invisible goodness of the gods to become visible in operation, becoming itself both assimilated to it, and accomplishing perfect works that are like it. For then what was before unutterable in it is made capable of being uttered, what was without form is caused to shire forth in visible figures, whatever of it was beyond all reasoning is brought forth into plain words, and having already received the connate participation of beautiful gifts it bestows the same ungrudgingly, and transfers them to the races that rank after itself.

Thus these intermediate races complete the common bond of gods and souls and render the connection between them indissoluble. They not only bind these together in one continuous series, from those on high to the very last, but they make the union of them all incapable of being separated and to be a most perfect blending and an equal intermingling of them all. They likewise, after a manner, cause an outgoing influence to go forth equally from the superior to the inferior races and a reciprocal one from subordinate races to those ranking above them. They also establish order among the more imperfect races, and likewise due proportions of the gift coming down from the better ones and of the reception which takes place; and having themselves received from above from the gods the causes or motives of all these, they make everything agreeable and suited in every respect to all.

Thou must not think, therefore, that this classification is a peculiarity of powers or of energies or of essence; nor art thou taking them separately, to inspect them one by one. Nevertheless, by extending the inquiry through all of them thou wilt complete the answer to what was asked in relation to the peculiarities of gods, demons and half-gods, and of those that are included in the category of souls.

Let us proceed again, by another line of argument. Everything, whatever it may be, and of whatever quality, that is united, that is firmly established in itself by unalterable law and is a cause among the indivisible essences – that is immovable, and so is to be considered as the cause of all motion – that is superior to all things and has nothing whatever in common with them – that is to be generally considered as wholly unmingled and separate, not only in being but in power and energy – every such thing should be ascribed to the gods as being worthy of them. But that which is already divided into a great member, that which can give itself to other objects, that which both receives from others the limitation within itself and is sufficient for the distribution among imperfect ones to make these complete, that nevertheless participates in the primary and life-giving motion ¹⁹ and has communion with all things self-existent and coming into existence, that receives a commingling of substances from them all and imparts a radiating influence from itself to all, and that extends these peculiar properties through all the powers, essences and energies in itself – all this, speaking what is true, we shall ascribe to souls, as being implanted in them.

THE INTERMEDIATE RACES

What shall we say, then, in regard to the intermediate races? I think from what has been said already that they are sufficiently manifest to every one; for they make complete the indivisible connection between the extreme races. ²⁰ Nevertheless, it is necessary to continue the explanation. I assume, accordingly, the race of demons to be a multitude in one, to be commingled in an unmingled manner, and to accept the lower races as associated with a distinct concept of the most excellent. But on the other hand, I describe the race of heroes or demi-gods as being placed over more common distribution and multitude, and likewise over action and commingling, and matters akin to these. It also receives gifts from above, transcendent, and as though concealed within – I mean union, purity of nature, stable condition, and undivided identity and superiority over others. For each of these intermediate races is next to one of the extreme races beyond – one to the first and the other to the last. It follows as a natural

result that by a continued series of kindred relations the demonian race, beginning from the highest in rank, proceeds to the lower races, and that the other, having primarily a connection with the last of them all, should in some way have communication with those that are superior.

Hence there may be perceived the complete joining to gather into one of the first and last races (the gods and souls) through the intermediates (the demons and half-gods), and the entire sameness of nature, alike equally in substance, and also alike in power and energy. ²¹ Whereas, therefore, we have made the classification of the four races in these two ways perfectly complete, we think it sufficient in regard to the others that for the sake of brevity, and because that which remains – the comprehending of the intermediate tribes – is in a measure already plain, we exhibit only the peculiarities of the extreme races. Hence we shall pass over the intermediate tribes as being already well known, and make a sketch of the others in some way in very few words.

Notes:

Chapter 2. Reply of Abammon the Teacher to The Letter of Porphyry to Anebo.1. Hermes is here the same as the Egyptian divinity, Thoth or Tahuti, the god of learning and medicine. He was regarded as the Scribe or recorder who registered the actions of the dead and living, so that they “were judged out of those things which were written in the books.” He was also the revealer of the divine will to men. His name Tahuti signifies “thrice great” or “very great,” or Trismegistos, Greek.

Chapter 2. Reply of Abammon the Teacher to The Letter of Porphyry to Anebo.2. The priests in Egypt consisted of many orders, including those who performed the Rites, the learned profession which included prophets, philosophers, poets, authors, physicians, artists, master mechanics, and also embalmers of the dead.

Chapter 2. Reply of Abammon the Teacher to The Letter of Porphyry to Anebo.3. This form of expression extends through this entire book. Though hardly familiar to us, it was formerly common in philosophic writings. The gods being spiritual essences, it was very properly considered that their worshipers would participate in their substance as we partake of the air that we inhale. In this way their powers and virtues were supposed to be imparted to the recipients. This treatise accordingly mentions the gifts received by the persons initiated at the telestic or Theurgic Rites, as a participating of the gods. The fact that they represent or personify qualities rather than individualities makes this mode of speaking eminently proper.

Chapter 2. Reply of Abammon the Teacher to The Letter of Porphyry to Anebo.4. In archaic periods, the worship and literature of every people was exclusive. Every repast being accompanied by religious ceremonies, the Egyptians would not eat with foreigners. Ashmes II broke through this restriction and made treaties of friendship and commerce with several Grecian and Ionian States. By his command, and at the instance of Polykrates of Samos, a tyrant-king, Pythagoras was admitted to instruction at the temples, and formally initiated into the sacerdotal caste. After the Persian

conquest others resorted to Egypt for similar purposes; among them Plato, Demokritos, Archimedes, Chrysippos, Euripides.

Chapter 2. Reply of Abammon the Teacher to The Letter of Porphyry to Anebo.5. It is evident that there was a Gnosis, or Sacred Doctrine common to the religions of the principal countries, and that its focus was at Babylon. Compare Jeremiah LI. 7 and Revelation XVII. Iamblichos lived chiefly at Khalkis In Syria, and was familiar with the magi and learned men of Persia and Assyria. Hence as Abammon he refers the Gnosis to that region.

Chapter 2. Reply of Abammon the Teacher to The Letter of Porphyry to Anebo.6. The Stellae, Pillars or Tablets of Thoth, appear to be little else than a figurative expression for the sacred learning in possession of the Sacerdotal Caste in Egypt. When we call to mind that the Pyramids in that country, before their spoilation, were cased all over with tablets of stone on which hieroglyphic writing was engraved, we shall the better apprehend the significance of the allusion of Abammon.

Chapter 2. Reply of Abammon the Teacher to The Letter of Porphyry to Anebo.7. Greek, ergatheia divine works or performances; the exhibitions at the Mystic Rites. As these were dramatic representations to prefigure experiences of a spiritual character, we substitute the term "drama" as more likely to afford a clearer conception of the meaning. Element designated the Eleusinic "drama."

Chapter 2. Reply of Abammon the Teacher to The Letter of Porphyry to Anebo.8. Mr. Gale, editor of the Greek text of this work as published at Oxford, was of the opinion that the reading of the original was corrupt, and suggested an emendation which may be rendered as follows: "It is impossible to explain by mere words." This would be in harmony with the statement in the Second Pauline Epistle to the Corinthian believers: "He was carried suddenly to paradise and heard things ineffable which it is not permitted to a human being to utter familiarly."

Chapter 2. Reply of Abammon the Teacher to The Letter of Porphyry to Anebo.9. Plato and his disciples employ the principle or being to denote the Absolute Divinity; also the phrase ontws on real being or that which really is or has being, as contrasted with the "genesis" or objective existence.

Chapter 2. Reply of Abammon the Teacher to The Letter of Porphyry to Anebo.10. It was the practice of the philosophers to make use of abstract terms to represent the Supreme and Absolute. Of this character are to agaon the Good; to alhqes the True, o eis the One.

Chapter 2. Reply of Abammon the Teacher to The Letter of Porphyry to Anebo.11. Power and energy are thus distinguished from their result. Damaskios remarks that "where there is not otherness, there will be no knowing. A union or conjunction, as of one to another, is superior to knowledge." Plato taught, says Professor Cooker, that man longs for the good, and bears witness by his restlessness and disquietude; that he instinctively desires it, and that he can find no rest and satisfaction in anything apart

from the knowledge and participation of the Supreme Absolute Good.

Chapter 2. Reply of Abammon the Teacher to The Letter of Porphyry to Anebo.12. The Chaldaean Oracles quoted by Damaskios declare that “the prolific fountain of souls is encompassed by the two Minds.” He adds that “the fiery signals which draw down the ripe ones are in God,” which Simplikios explains: “The Unbodied ones are the supreme Mind and God being Source and Cause.”

Chapter 2. Reply of Abammon the Teacher to The Letter of Porphyry to Anebo.13. Damaskios described the “demons” as tutelary spirits of a nature essentially divine. They were said to have charge of the oracles and worldly affairs generally. The “heroes” or demigods were a lower race in the order of emanation. The term denotes the son of a divinity, with a human parent. Uncontaminated souls are such as are not impure from the attraction of the genesis or domain of phenomenal existence.

Chapter 2. Reply of Abammon the Teacher to The Letter of Porphyry to Anebo.14. The Platonic philosophers before Iamblichos taught that the many gods are the “outshinings” or emanations of the one Superessential Deity and not substances complete of themselves. The Ancient Sadducees are said to have held a similar opinion, not denying the actual existence of angels and spirits, but that they existed permanently by inherent energy. The same sentiment appears in the ninety-fifth (ninety-sixth) Psalm. The Chaldaean Oracle, however, declared that “Not from the eternal source did anything run forth incomplete.”

Chapter 2. Reply of Abammon the Teacher to The Letter of Porphyry to Anebo.15. Plato defines essence as that which has “real being,” and describes it as “colorless, formless, and intangible, visible only to the mind or higher reason that guides the soul.”

Chapter 2. Reply of Abammon the Teacher to The Letter of Porphyry to Anebo.16. Plato bases upon this fact the immortality of the soul. The soul originates its own action and receptivity by volition. This volition is self-motion, and is that quality of moral freedom which has placed human beings above and apart from the animal tribes.

Chapter 2. Reply of Abammon the Teacher to The Letter of Porphyry to Anebo.17. In the Assyrian or Chaldaean Plan of Divine Orders, the following are instanced by Damaskios: 1. The Intellectible Gods. 2. The Hyparchs or superior archons. 3. The Archons. 4. The Archangels. 5. The Azoni or unclassified who belong to no defined jurisdiction. 6. Local Genii. This arrangement is hinted at in Part VIII, § 2.

Chapter 2. Reply of Abammon the Teacher to The Letter of Porphyry to Anebo.18. This is the common dogma of every ancient faith. In the Hindu category, the Brahman is the Good which is beyond essence and absolute, while Brahmá is identical with essence. The Parsis acknowledge Zurvan, the Unlimited, and Ahura Mazda, the Divine Creator. The Egyptian priests worshipped Amun, the hidden One, and Ptah, the Demiurgos or Architect of the Universe.

Chapter 2. Reply of Abammon the Teacher to The Letter of Porphyry to Anebo.19.

Iamblichos is generally regarded as here endeavoring to reconcile the apparent discrepancy between Plato and Aristotle – the latter described the soul as immovable, and Plato as self-moving, in which statement he refers to operation and not to essence. Syrianos explains that the soul is self-moving because it is set in motion from itself and certainly not by an agent inferior to itself. Proklos adds that the soul is self-moved in respect to the body and things of sense which plainly are set in motion from without themselves.

Chapter 2. Reply of Abammon the Teacher to The Letter of Porphyry to Anebo.²⁰ The gods above and the souls below, angels, demons and demigods.

Chapter 2. Reply of Abammon the Teacher to The Letter of Porphyry to Anebo.²¹ This distinction of principles is noted in the Chaldaean Oracles. Pythagoras indicates the same by the terms monad, duad, triad; Plato by peras, apeiron, and mikton; Damaskios by the One, the many, and the union. Another version of the Oracles in place of “Substance” has Father, and for “energy” Mind or Reason.

[Chapter 3. The Superior Races](#) [Theurgia or The Egyptian Mysteries By Iamblichos](#) [PECULIARITIES OF THE GODS AND SOULS](#)

In regard to the extreme races (the gods and souls) the former is chief, superior and perfect; the other is inferior and imperfect. The former can do all things at once uniformly and now; but the other is neither able to do anything completely nor immediately; neither speedily nor individually. The former generates all things and is guardian over them; but the latter has a natural disposition to yield and to turn submissively toward what it generates and has under guardianship. The former, being the original cause, has preeminence over all; but the latter, being dependent upon the pleasure of the gods as from a cause, is coexistent with it from eternity. The former in a single decisive moment grasps the ends of all the energies and essences; but the latter passes from some things to others and goes forward from the imperfect to the perfect. Further still, there exists with the former the highest and unlimited, superior to all measurement, and so completely formless as to be circumscribed by no formative principles; but the latter is dominated by impulse, habit and inclination, and is held fast both by longings for that which is inferior and by being familiar with things of a secondary character. At length it is moulded in various ways and proportions from them. Hence MIND, the leader and king of the things that actually are, the demiurgic art of the universe, is always present with the gods in the same manner, completely and abundantly, being established in itself unalloyed according to one sole energy. But the soul partakes of divisible and multiform mind, ¹ adapting itself to the supreme authority over all. It also takes care of unsouled beings, having been itself born into various forms at different times. From the same causes, order itself and beauty itself are coexistent with the Superior races; or if it is desired so to express it, the First cause is coexistent with these. But with the soul the allotment of intellective order and

divine beauty is always associated. With the gods, the measure of all things, or rather the cause of it, is perpetually coordinate; but the soul is confined to the divine limit and only participates of this in a limited degree. With good reason there may be ascribed to the gods dominion over all beings, by the power and supreme authority of the First Cause; but the soul has defined limits within which it can have command.

Such being the different peculiarities of the races at the highest and lowest extremes, what we have now been saying may be understood without difficulty, and also the peculiarities of the intermediates, the demons and half-gods; these being each next to one of the extremes, resembling both and going out from both to the intermediate region, and so effecting a harmonious union by commingling them and joining them together in due proportions.

Let such, then, be considered the peculiarities of the first divine races.
DISTINCTIONS OF THE SUPERIOR RACES

Surely we do not admit the distinction of the Superior races to be what is suggested by thee: "a classification established by difference of bodies, the gods being distinguished by ætherial bodies, the demons by aërial bodies, and souls by bodies pertaining to the earth." Such an arrangement would be like the assigning of Sokrates to a tribe when he was a Prytanis, ² and is not proper to be admitted in regard to the divine races, which are all by themselves, unbound and free. ³ To make bodies their own first causes, as to their specific nature, appears to be a fearful absurdity; for they are subservient to these causes and subject to the conditions of generated existence.

Further still, the races of Superior beings are not in the bodies, but govern them from outside. Hence they do not undergo changes with the bodies. Yet they give from themselves to the bodies every such good as the latter are able to receive, but they themselves receive nothing from the bodies. Hence they cannot have received from them any peculiarities. For if they were as habits of the bodies, or as material forms, or some other body-like quality, it might be possible for them, perhaps, to undergo change together with the different conditions of the bodies. But if they preexist separate from bodies, and unmingled with them, what rational distinction originating from the bodies can be developed in them?

In fact, this proposition in regard to these races makes the bodies actually superior to the divine races, since by such a hypothesis they furnish a vehicle for the superior causes and fix in them the peculiarities incident to their essence. Nevertheless, it is plain that if the allotments, distributions and assignments of those that govern are arranged with those that are governed this authority will be given to the more excellent. For it is because those that are placed over others are such that they receive thereby such an allotment, and give this a specific character; but the essence itself does not become assimilated to the nature of the corporeal receptacle. ⁴

Hence I may speak as regards this subject in its turn, but a supposition of this kind must be admitted in respect to the imperfect soul. For such a mode of living as the soul

projected, and such an ideal as was ready before entering into a human body, there is a corresponding organic body, joined to it and a similar nature which receives its more perfect life. ⁵

In respect to the superior races and those which as being universal include the origin of all, the inferior ones are produced in the superiors, the corporeal in the incorporeal, and, being encompassed by them in one circle, are governed by them. Hence the revolutions of the heavenly spheres ⁶ have been induced originally by the aetherial soul and are always inherent in it. The souls of the world also being extended to their own mind, are absolutely encompassed by it and primarily generated in it. In like manner also, the Mind, both that which is divisible (into attributes and qualities) and that which is entire, is included (as essential quality) of the superior races. Hence the secondary races, being always turned toward the primary, and the superiors leading the inferiors as exemplars, essence and ideal come to the lower races from those which are superior, and those which are ignoble are produced primarily in the more excellent. Hence, accordingly, order and proportion come from the latter to the inferior races, and these are what they are through the former. But there is no transmitting of peculiarities from the inferior races to those which precede them.

Such a classification, therefore, based on corporeal conceptions, is shown by these arguments to be false. Even though in this case it may seem otherwise to thee, the false assumption is not worthy of a word. Such a case does not exhibit abundant argument, but one belabors himself to no purpose if he puts forth hypotheses and then endeavors to refute them as not being true. For in what way is essence, which is absolutely incorporeal, having nothing in common with the bodies that partake of it, to be distinguished from such bodies? Not being in any way present with the bodies as a matter of place, how is it to be separated by places after the corporeal manner? And not being separated by circumscribed divisions of subject matter, how is it to be held in a divided condition by the divisions of the world? But what is more, what is there that can hinder the gods from going everywhere? What is there to hold their power in check, from extending to the vault of the sky? For this would be the work of a cause far mightier than the one shutting them in and circumscribing them within certain parts. Real being – that which truly is, and which is in itself incorporeal – is everywhere, wherever it pleases. Yet, as thou takest for granted, that which is divine and which transcends all things is itself transcended by the perfectness of the entire world, and is encompassed by it in a specific division, and hence is inferior in respect to bodily dimensions. Yet if there is no divine creation and no participation of divine ideals extending through the whole world, I do not see, for my part, any opportunity for a creating and framing of them after specific forms.

In short, however, this opinion which banishes the presence of the superior races entirely from the earth is an abrogating of the Sacred Rites and theurgic communion of the gods with human beings. For it says nothing else than that the divine ones dwell apart from the earth, that they do not commingle with human beings, and that this region is deserted by them. Consequently, according to this reasoning we priests have never learned anything whatever from the gods, and since we differ in nothing from other men thou hast not done right in questioning us as though we knew more than

others.

Not one of these statements of thine, however, is sound. For neither are the gods limited to parts of the earth, nor are the inferior races about the earth excluded from their presence. On the contrary, the superior races are characterized in this way: that they are encompassed by nothing and that they encompass all things in themselves. But those that belong to the earth have their being in the perfections (pleromas) of the gods, and when they become fit for the divine communion they at once, prior to their own essence, possess the gods that preexisted in it.

That this entire classification is false, that this plan of investigating peculiarities is irrational, and that the notion of distributing the gods each to a certain region does not permit the receiving of the entire essence and power which are in them, we have fully established. It would have been right, therefore, to omit the dissenting inquiry in regard to the distribution of the Superior races, as it contradicts nothing in regard to the true conceptions. On the other hand, our attention should be directed, instead, to the intelligent perception of matters relating to the gods, and not to the holding of a discussion with a man; and for this reason we shall adapt the present discourse to the disposing of subjects of probability and matters relating to the gods.

HOW DIVINE RACES ARE DISTRIBUTED

I assume accordingly that thou askest a solution of that matter of which thou seemest to be in doubt, namely: "As the gods dwell only in Heaven, why are invocations at the Theurgic rites directed to them as being of the Earth and Underworld?"

This position which is thus assumed at the beginning, namely: that the gods traverse heaven only, is not true; for the universe is full of them. But thou then demandest: "How is it that although possessing power unlimited, undivided, and unrestricted, some of them are mentioned as being of the water and of the atmosphere, and that others are allotted by definite limitation to different places and distinct parts of bodies? If they are actually separated by circumscribed limitations of parts, and according to diversities of places and subject-bodies, how will there be any union of them one to another?"

One most excellent solution of all these and an infinite number of similar questions is by a survey of the manner in which the gods are allotted.

This, then, is the explanation: Whether the allotment be to certain parts of the universe, as to heaven or earth, whether to holy cities and regions, whether to certain temple-precincts or sacred images, the divine irradiation shines upon them all from the outside, just as the sun illuminates every object from without with his rays. Hence, as the light encompasses the objects that it illuminates, so also the power of the gods comprehends from without those that participate of it. In like manner, also, as the light of the sun is present in the air without being combined with it – and it is evident that there is nothing left in the air when the illuminating agent is removed, although warmth is still present when the heating has entirely ceased – so also the light of the gods shines while entirely separate from the objects illuminated, and, being firmly established in itself, makes its way through all existing things.

Still further, the light that is the object of perception is one, continuous, and everywhere the same entirety; so that it is not possible for a part of it to be cut off by itself, or to be enclosed in a circle, or at any time to remove itself from the source of illumination. According to the same principles, therefore, the whole universe, being susceptible of division, is distinguished with reference to the one and indivisible light of the gods. In short, this light is one and the same everywhere, and is not only present, undivided, with all things that are capable of participating of it, but it, likewise, by an absolute power and by an infinite superiority, fills all things, as a cause, joins them together in itself, unites them everywhere with itself, and combines the ends with the beginnings. The whole heaven, including with it the universe imitating this, goes around in a circular revolution, unites all to itself, and leads the elements whirling in a circle; and all things being in one another, and borne toward one another, it holds them together and defines their equal proportions; and guiding them to the remotest distances, makes the ends combine with the beginnings – as, for example, the earth with the sky – and effects a sole connection and accord of wholes with wholes.

Who, then, that contemplates the visible image of the gods thus united as one ⁷ will not have too much reverence for the gods, its causes, to entertain a different judgment and to introduce among them artificial divisions, arbitrary distinctions, and corporeal outlines? I, for one, do not think that any one would be so disposed. For if there is neither any analogy, nor scheme of proportion, nor interblending in respect to power or simple energy of that which is set in order with that which sets in order, ⁸ then I say that there is nothing existing in it, either of extension or in regard to distance, or of encompassing locally, or of division by due setting apart, or of any other such natural equalizing of qualities in the presence of the gods with beings inferior in their nature. For in natures that are homogeneous in essence and power, or that are in some manner of similar form or alike in race, there can be perceived an encompassing or holding fast. But in the case of those that are totally exempt from all these conditions, what opposing circumstance in respect to these things, or pathways through them all, or separate outline, or encompassing in some prescribed space, or anything of this kind, can be justly conceived? On the other hand, I think that they who are partakers of the gods ⁹ are, every one, of such a nature as to partake of them according to their own intrinsic quality, some as of the other, others as of the atmosphere, and others as of the water; which the technique of the Divine Performances recognizes, ¹⁰ and so makes use of the adaptations and invocations according to such a classification.

So much may be stated in regard to the distribution of the superior races in the world.
SUPERIOR BEINGS NOT CLASSIFIED AS PASSIVE AND IMPASSIBLE

After these distinctions thou suggestest another classification on thy own account, and separatest the essences of the superior races by the differentiation of “passive and impassible.” I do not, however, by any means accept this classification. For no one of the superior races is passive, nor yet is it impassible in such a manner as to be thus contradistinguished from any that is susceptible, as being adapted by nature to receive impressions, or as freed from them through inherent virtue or some other excellent

condition. On the other hand, it is on this account, because they are entirely exempt from the inconsistency of being either passive or not passive, because they are in no way susceptible to impression, and because they are unchangeably fixed in regard to essence, that I set them down in all these respects as impassive and unchangeable.

Consider, if thou art willing, the last one of the divine races, the soul pure from the defilement of bodies. Being superior to the realm of nature, and living the unbegotten life, what does it want of the generated life with sensual pleasure and of the restoration thereby into the realm of nature? ¹¹ Being outside of everything corporeal, and of the nature which is divisible in respect to the body, and being likewise entirely separate from the accord in the Soul which goes down into the body, why is it to participate of the pain that leads to decay and dissolution of the structure of the body? On the contrary, it has no occasion for the susceptibilities which are forerunners of sensation, for it is neither held at all in a body nor in any way environed by it so as to have occasion for bodily organs in order to perceive different bodies outside of these organs. In short, however, being indivisible, remaining in the one same form, being essentially incorporeal, and having nothing in common with the generating and susceptible body, it can be affected by nothing in regard to classification or transformation, nor in short has it any concern whatever with change or condition.

But on the other hand, whenever the soul comes into the body it is not itself, nor are the rational faculties which it imparts to the body susceptible to impression. ¹² For these are simple and single ideals, not admitting any disturbing element or entrancement, so far as relates to them. It is, therefore, the something that yet remains that is the cause of such experience to the composite nature. Nevertheless, the cause is not in any way the same as the effect. ¹³ Hence, the Soul being the first genesis and origin of the composite living beings that come into existence and pass to dissolution, is itself, so far as relates to itself, unbegotten and imperishable; so also those that participate of the soul are susceptible to impression and do not possess life and essence in their completeness, but are entangled in the indefiniteness and alien conditions of the realm of matter. ¹⁴ Yet the soul, as relates to itself, is unchangeable, as being in its own essence superior to impression, and as neither being moved by any preference inclining in both directions (passiveness and impassibility), nor as receiving an acquired versatility in the participating of habitude and power.

Since, therefore, we have shown, in respect to the last race of the superior orders, namely, the soul, that it is impossible for it to participate in any passive or impressionable condition, how is it proper to attribute this participation to demons and half-gods who are sempiternal and follow the gods, and themselves according to their respective grades preserve, and likewise in their several places make the regular arrangement of the divine beings always complete, and do not leave any unoccupied space between the different orders? For this we know for certain: that the passive condition is not only undisciplined but also discordant and unstable, never being in any case its own master, but attached to that by which it is held fast and to which it is subservient in reference to the sphere of generated existence. This condition of passiveness, therefore, pertains to some other race rather than to one always existing and allied to the gods, not only maintaining the same arrangement but likewise going

around the same circuit with them. Hence, therefore, the demons, and all who rank with them after the superior races, are impassible.

Notes:

Chapter 3. The Superior Races1. The Chaldaean Oracles also recognize this twofold mind. The one, the Pure Reason or Intelligence, was placed over the first Triad. "The Mind of the Father named all things in threes, and governed them all by Mind." This mind they considered as sole, unparticipating, and essential. The other was described as participant and divisible into parts or qualities.

Chapter 3. The Superior Races2. The Prytanis of Athens were fifty in number, and were selected from the Boulé or Senate. Sokrates, at the age of sixty, was chosen to that dignity.

Chapter 3. The Superior Races3. The Chaldaean Theology did not unequivocally describe all the gods as "unbound." The seven cosmokrators, or rulers of the world, the lords of the zodiacal houses and the cosmic gods assigned to regions of the world, were bound to their respective jurisdictions.

Chapter 3. The Superior Races4. The pre-existence of the soul in the eternal world, before becoming involved in the genesis and conditions of the earth-life, was generally believed. Even after being set free at death, it was supposed to be, after a period of less or greater length, again attracted back to the mundane sphere. Plato illustrates this by the Vision of Eros in the Republic. The choice of the earthly condition is made by the soul itself, and very generally it differs from what it had been in the preceding term of life in the world. "The cause is in him who makes the choice, and the divinity is without blame in the matter." Eros adds that after the souls had chosen their new lives according as they drew the lots, they all went in their order to Lachesis, and she gave to every one the demon that he had chosen, and sent the demon along with him to be the guardian genius of his life, and the accomplisher of the fate which he had chosen. Then he was born anew into the earth.

Chapter 3. The Superior Races5. The cause or incentive for the coming of the soul into generated life is variously explained by different writers. According to Plotinus, the universal soul does not come to a body as the body may come to it, nor does the body contain the soul, but is contained by it. Simplicios accepted the statement of Iamblichos, that "the soul projects certain lives for itself."

Chapter 3. The Superior Races6. The stars and planets were regarded as abodes or receptacles of souls.

Chapter 3. The Superior Races7. Plato affirms this in the Epinomis. "It is Heaven that we should honor," says he; "it is the cause of all benefits to us." Abammon, doubtless, alludes to Ra, of the Egyptian Pantheon, who was regarded as the source of light, and also as being the whole heaven united as one eikon and personality.

Chapter 3. The Superior Races8. Proklos reiterates this declaration, so often insisted upon, that the superior nature and essence can receive nothing from one that is inferior.

Chapter 3. The Superior Races9. Intelligent readers will understand from what has been said, that as the gods are spiritual essences, the partaking of them, or, in other words, of their irradiation, is analogous to the partaking of light. The luminance itself is in no way affected, but the partaker is filled and pervaded by it.

Chapter 3. The Superior Races10. This is the Theurgic Rite. "This Theurgy," says Thomas Taylor, "is, doubtless, the same as the 'Magic of Zoroaster,' which was no 'Black art,' but a peculiar mode of worship."

Chapter 3. The Superior Races11. The soul was called by Damaskios, our last echo of Divinity. In the mundane region it was considered as not a whole and united essence, but as divided into qualities and traits of character.

Chapter 3. The Superior Races12. Plotinus, using the comparison that the workman does not contract the imperfections of his tools, remarks that it is not necessary that the soul shall be itself affected by the conditions of the body. It simply uses the body as its instrument: It is incorporeal, and hence the passions and susceptibilities of the body do not penetrate into its substance, but only into its powers and energies.

Chapter 3. The Superior Races13. Proklos illustrates this by the analogy of a man viewing his own image in a stream of water. He is unchanged in his own person and individuality, but the image exhibits great perturbation. So the soul contemplates its own image as reflected in the body, and though it is itself impassible and unaffected, it may be perplexed by the incidental disturbances.

Chapter 3. The Superior Races14. Greek, *ulg*, wood, rubbish; the negative or inert quality called matter, from which natural objects proceed. Aristotle first adopted the term. Plato, unable to conceive of matter as substance per se, made use of terms signifying the "nurse" and the "receptacle" or passive force. The term "matter" is from *materia*, the mother-principle. The phrase "realm of matter" is adopted here, as the term implies a department in the universe, and not simply matter itself.

Chapter 1. Letter of Porphyry to Anebo

Theurgia or The Egyptian Mysteries By Iamblichos

Porphyry to the Prophet Anebo. ¹ Greeting.

I will begin this friendly correspondence with thee with a view to learning what is believed in respect to the gods and good demons and likewise the various philosophic speculations in regard to them. Very many things have been set forth concerning these subjects by the (Grecian) philosophers, but the for the most part have derived the substance of their belief from conjecture.

1. The Gods and their peculiarities

In the first place, therefore, it is to be taken for granted that there are gods. I ask then: what are the peculiarities of the superior races, by which they are differentiated from each other? Are we to suppose the cause of the distinction to be their energies or their passive motions, or things consequent: or is it a classification established by difference of bodies – the gods being distinguished by aetherial bodies, the demons by aërial bodies, and souls by bodies pertaining to the earth?

As the gods dwell in heaven only, I ask therefore, why are invocations at the Theurgic Rites directed to them as being of the Earth and Underworld? How is it that although possessing power unlimited, undivided, and unrestricted, some of them are mentioned as being of the water and of the atmosphere, and that others are allotted by definite limitations to different places and to distinct parts of bodies? If they are actually separated by circumscribed limitations of parts, and according to diversities of places and subject-bodies, how will there be any union of them one to another?

How can the Theosophers ² consider them as impressionable? For it is said that on this account phallic images are set up and that immodest language is used at the Rites? ³ Certainly if they are impassive and unimpressionable the invocations of the gods, announcing favorable inclinations, propitiations of their anger and expiatory sacrifices, and still further what are called “necessities of the gods,” will be utterly useless. For that which is impassive is not to be charmed or forced ⁴ or constrained by necessity.

Why, then, are many things performed to them in the Sacred Rites, as to impressionable beings? The invocations are made as to gods that are impressionable beings: so that it is implied that not the demons only are impressionable, but the gods likewise, as was declared in Homer:

“Even the gods themselves are yielding.”

Suppose, then, we say, as certain individuals have affirmed, that the gods are pure mental essences and that the demons are psychic beings participating of mind. ⁵ The fact remains, nevertheless, that the pure mental essences are not to be charmed or mingled with things of sense, and that the supplications which are offered are entirely foreign to this purity of mental substance. ⁶ But on the other hand the things that are offered are offered as to sensitive and psychic natures.

Are gods, then, separated from demons by the distinction of bodied and unbodied? If, however, only the gods are incorporeal, how shall the Sun, the Moon, and the visible luminaries in the sky be accounted as gods?

How is it that some of them are givers of good and others bring evil?

What is the bond of union that connects the divinities in the sky that have bodies with the gods that are unbodied?

The gods that are visible (in the sky) being included in the same category with the invisible, what distinguishes the demons from the visible, and likewise the invisible, gods?

2. The superior races and their manifestations

In what does a demon differ from a hero or half-god or from a soul? ⁷ It is it in essence, in power, or in energy? ⁸

What is the token (at the Sacred Rites) of the presence of a god or an angel, or an archangel, or a demon, or of some archon, or a soul? For it is a common thing with the gods and demons alike, and with all the superior races, to speak boastfully and to project an unreal image into view. ⁹ Hence the race of the gods is thus made to seem to be in no respect superior to that of the demons.

It is also acknowledged that ignorance and delusion in respect to the gods is irreligiousness and impurity, and that the superior knowledge in respect to them is holy and helpful: the former being the darkness of ignorance in regard to the things revered and beautiful, and the latter the light of knowledge. The former condition will cause human beings to be beset with every form of evil through ignorance and recklessness, ¹⁰ but the latter is the source of everything beneficial.

3. Oracles and Divination

What is it that takes place in divination? For example, when we are asleep, we often come, through dreams, to a perception of things that are about to occur. We are not in an ecstasy full of commotion, for the body lies at rest, yet we do not ourselves apprehend these things as clearly as when we are awake.

In like manner many also come to a perception of the future through enthusiastic rapture and a divine impulse, when at the same time so thoroughly awake as to have the senses in full activity. Nevertheless, they by no means follow the matter closely, or at least they do not attend to it as closely as when in their ordinary condition. So, also, certain others of these ecstasies become enthused or inspired when they hear cymbals, drums, or some choral chant; as for example, those who are engaged in the Korybantic Rites, those who are possessed at the Sabazian festivals, and those who are celebrating the Rites of the Divine Mother. Others, also, are inspired when drinking water, like the priest of the Klarian Apollo at Kolophon; others when sitting over cavities in the earth, like the women who deliver oracles at Delphi; others when affected by vapor from the water, like the prophetesses at Branchidæ; and others when standing in

indented marks like those who have been filled from an imperceptible inflowing of the divine plerome. Others who understand themselves in other respects become inspired through the Fancy: some taking darkness as accessory, others employing certain potions, and others depending on singing and magic figures. Some are affected by means of water, others by gazing on a wall, others by the hypethral air, and others by the sun or in some other of the heavenly luminaries. Some have likewise established the technique of searching the future by means of entrails, birds, and stars.

What, I ask, is the nature of divination, and what is its peculiar character? The diviners all say that they arrive at the foreknowledge of the future through gods or demons, and that it is not possible for others to have any inkling of it only those who have command over the things to be. I dispute, therefore, whether the divine power is brought down to such subserviency to human beings as, for instance, not to hold aloof from any who are diviners with barley-meal.

In regard, however, to the origins of the oracular art, it is to be doubted whether a god, or angel, or demon, or some other such being, is present at the Manifestations, ¹¹ or at the divinations, or at any other of the Sacred Performances, as having been drawn thither through you by the necessities created by the invocations.

Some are of opinion that the soul itself both utters and imagines these things, and that there are similar conditions of it which have been produced from little sparks; others, that there is a certain mingled form of substance produced from our own soul and from the divine in breathing; others, that the soul, through such activities, generates from itself a faculty of Imagination in regard to the future, or else that the emanations from the realm of matter bring demons into existence through their inherent forces, especially when the emanations are derived from animals.

These conjectures are put forth for the following statements:

1. That during sleep, when we are not engaged with anything, we sometimes chance to obtain perception of the future.
2. That likewise, an evidence that a condition of the Soul is a principal source of the art of divining is shown by the facts that the senses are held in check, fumes and invocations being employed for the purpose; and that by no means everybody, but only the more artless and young persons, are suitable for the purpose.
3. That likewise, ecstasy or alienation of mind is a chief origin of the divining art; also the mania which occurs in diseases, mental aberration, abstinence from wine, suffusions of the body. fancies set in motion by morbid conditions or equivocal states of mind, such as may occur during abstinence and ecstasy, or apparitions got up by technical magic. ¹²
4. That both the realm of Nature, Art, and the feeling in things of common throughout the universe, as of the parts in one animal, contain foreshadowings of certain things with reference to others. Moreover, there are bodies so constituted as to be a

forewarning from some to others. Examples of this kind are manifest by the things done, namely: that they who make the invocations (at the Rites) carry stones and herbs, tie sacred knots and unloose them, open places that are locked, and change the purposes of individuals by whom they are entertained, so that from being paltry they are made worthy. They also who are able to reproduce the mystic figures are not to be held in low esteem. For they watch the course of the heavenly bodies, and tell from the position and relation of one with another whether the oracular announcements of the ruling planet will be false or true, or whether the rites which have been performed will be to no purpose, or will be expressive or archaic, although no god or demon is drawn down to them.

There are some, however, who suppose there is likewise, the subject-race of a tricky nature, artful, and assuming all shapes, turning many ways, that personates gods and demons and souls of the dead like actors on the stage; and that through these everything that seems to be good or bad is possible. They are led to form this judgment because these subject-spirits are not able to contribute anything really beneficial as relates to the soul, nor even to perceive such things; but on the other hand, they ill treat, deride, and often impede those who are returning to virtue.

They are likewise full of conceit, and take delight in vapors and sacrifices.

5. Because the begging priest with open mouth attempts in many ways to raise our expectations. ¹³

4. The invocation of the Theurgic powers

It perplexes me greatly to form a conception how they who are invoked as superior beings are likewise commanded like inferiors; also that they require the worshipper to be just, although when entreated, they themselves consent to perform unjust acts. They will not hearken to the person who is invoking them if he is not pure from sexual contamination, yet they themselves do not hesitate to lead chance individuals into unlawful sexual relations.

5. Sacrifices and Prayers.

(I am likewise in doubt in regard to the sacrifices, what utility or power they possess in the world and with the gods, and for what reason they are performed, appropriate for the beings thus honored and advantageously for the persons who present the gifts. ¹⁴)

The gods also require that the interpreters of the oracles observe strict abstinence from animal substances, in order that they may not be made impure by the fumes from the bodies; yet they themselves are allured most of all by the fumes of the sacrifices of animals.

6. Conditions for successful results

It is also required that the Beholder ¹⁵ must be pure from the contact of anything dead, and yet the rites employed to bring the gods hither, many of them, are made effective through dead animals.
